18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resource, however the policy is focused on protecting countryside access and improving connectivity through active travel routes.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Natural resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to natural resource, however the policy is focused on protecting countryside access and improving connectivity through active travel routes.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting countryside access and improving connectivity through active travel routes.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting countryside access and improving connectivity through active travel routes.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting countryside access and improving connectivity through active travel routes.	None identified.

Policy Name	HSP PE5: Indoor and Outdoor Sport and Recreational Facilities

Ref	Objective	Assessement Criteria	ST (0-4 years)	MT (5-9 years)	LT (10+ years)	Direct or Indirect	Temporary or Permenant	Receptors and/or Affected Groups	Potential Cumulative Effects	Potential Synergistic Effects	Explaination Against Objective	Mitigation/Enhancement
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Local population, affordable housing, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Local population, housing market, vulnerable groups	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Local population, housing land, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	T	Built environment, housing stock, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to housing stock, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	T	Vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local population, emloyment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local population, built environment, employment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	T	Built environment, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Local population, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, utilities, digital infrastructure, built environment	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	+	+	D	P	Local population, transport network, natural environment	Several sports facility policies across the borough collectively increase demand on local roads and public transport.	A sports facility policy combined with an active travel strategy could significantly boost cycling and walking uptake beyond what either policy would achieve alone.	The policy has positive effects as it supports sustainable and active travel by requiring access to public transport and active travel modes for new facilities.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	T	Local population, transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	+	+	I	P	Local population, transport network, natural environment	Several sports facility policies across the borough collectively increase demand on local roads and public transport.	A sports facility policy combined with an active travel strategy could significantly boost cycling and walking uptake beyond what either policy would achieve alone.	The policy has positive effects as it supports sustainable and active travel by requiring access to public transport and active travel modes for new facilities.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	+	++	D	T	Local population, lower socio-economic groups and deprived areas	Reduce levels of deprivation.	Improvements in air quality and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in access to green spaces will reduce health inequalities.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	+	++	D	T	Local population, lower socio-economic groups and deprived areas	Reduce levels of deprivation.	Improvements in air quality and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in access to green spaces will reduce health inequalities.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	+	I	T	Local population, vulnerable groups	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as there is reference to protecting outdoor sport and recreational facilities from new developments, which ensures spaces for social interaction and can foster good relations between different people.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	T	Local population, vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, vulnerable groups	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to the needs of different areas, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	o	o	o	I	T	Local communities, built environment	contributes to wide improvement in health, wellbeing, and accessibility over time.	Integrated with active travel and green infrastructure can promote community cohesion and sustainable mobility	The policy has positive effects as it supports wellbeing and community cohesion by protecting and enhancing sports and recreation facilities	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	I	T	Local population, local communities	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as there is reference to protecting outdoor sport and recreational facilities from new developments, which ensures spaces for physical activities and promotes active lifestyles.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	+	I	T	Local population, local communities	Ensuring sufficient provision of sports and recreational facilities can contribute to long term improvements in health, wellbeing and accessibility	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as it promotes active lifestyles by encouraging new and improved sports and recreation facilities and protecting existing ones. This can help improve health outcomes, particularly in areas with limited access to such facilities	The policy could be enhanced by explicitly targeting disadvantaged groups or address affordability and inclusivity which are key to reducing health inequalities.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	+	++	D	T	Natural environment, green and blue infrastructure	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as it promotes new and improved recreational spaces and protects existing provision, enhancing active environments and associated green infrastructure	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	D	T	Local communities, built environment, green and blue infrastructure	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as there is reference to protecting outdoor sport and recreational facilities,which promotes access to leisure and recreational facilities.	The policy could make more explicit reference to increasing the quantity and quality on top of safeguarding outdoor sport and recreational facilities from developments.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, health facilities, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to healthcare faciliites, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	D	T	Local communities, built environment, social infrastructure	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as there is reference to protecting outdoor sport and recreational facilities,which promotes their access and ensures their provision.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Local communities, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to travel needs, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	T	Local population, transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	T	Transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	T	Air quality, local population, designated sites, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	T	Air quality, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	T	Air quality, built environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	T	Green and blue infrastructure, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	T	Green and blue infrastructure, natural environment, built environment, local communities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	T	Habitats, biodiversity, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to ecological networks, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	T	Peatlands, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	T	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	P	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	T	Flood risk, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	T	Flood risk, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	T	Water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water quality, natural environment, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water management infrastructrue, built environment	N/A	N/A	The policy has neutral effects as there is no reference to water management, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to pollution, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	o	o	o	I	T	Landscape, natural environment, public realm, open spaces	Ensuring landscaping can improve the character and landscape quality	Combined with policies on green infrastructure and design can work to enhance quality and character of open spaces and public realm	The policy has positive effects as it enhances the quality and character of recreational landscapes through design and landscaping requirements.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	o	o	o	I	T	Local character, Peak District National Park	N/A	N/A	The policy has neutral effects as there is no reference to local character, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	o	o	o	I	T	Landscape, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	T	Soil resources, natural environment, built environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	T	Soil resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	T	Built environment, soil resource, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	T	Soil resource, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	T	Natural resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	T	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	T	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	T	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.

Policy Name	HSP PE6: Peak District National Park											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Local population, affordable housing, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Local population, housing market, vulnerable groups	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Local population, housing land, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	T	Built environment, housing stock, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to housing stock, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	T	Vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local population, emloyment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local population, built environment, employment land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	T	Built environment, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Local population, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, utilities, digital infrastructure, built environment	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	T	Local population, transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	T	Local population, transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	T	Transport network, cycling and walking routes	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	+	++	D	T	Local population, lower socio-economic groups and deprived areas	Reduce levels of deprivation.	Improvements in air quality and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in access to outdoor sport and recreational facilities will reduce health inequalities.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	+	++	D	T	Local population, lower socio-economic groups and deprived areas	Reduce levels of deprivation.	Improvements in air quality and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in access to outdoor sport and recreational facilities will reduce health inequalities.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, vulnerable groups	N/A	N/A	The policy has neutral effects as there is no reference to relations between people, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	T	Local population, vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, vulnerable groups	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	D	T	Local communities, built environment	Protecting the Peak District National Park can maintain access to natural beautry and improve the health and well- being levels of local residents.	Integrating with active travel network can promote use of sustainable modes of transport and increase the physical activity level of the public.	The policy has positive effects as there is reference to Peak District National Park, which addresses the specific needs of a different area.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to sense of belonging, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	T	Natural environment, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to the quantity and quality of active environments, open spaces, green and blue infrastructure, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	T	Local communities, built environment, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to access to green and blue infrastructure, public open space, leisure and recreational facilitie, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, health facilities, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to healthcare facilities, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	T	Local communities, built environment, social infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Local communities, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to travel movements, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	T	Local population, transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	T	Transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	T	Air quality, local population, designated sites, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	T	Air quality, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	T	Air quality, built environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	+	+	+	D	T	Designated sites, natural environment, biodiversity	Protecting the Peak District National Park can maintain access to natural beautry and improve the health and well- being levels of local residents.	Integrating with active travel network can promote use of sustainable modes of transport and increase the physical activity level of the public.	The policy has positive effects as there is reference to protecting the Peak District National Park from new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	-	-	-	D	T	Designated sites, natural environment, biodiversity	Protecting the Peak District National Park can maintain access to natural beautry and improve the health and well- being levels of local residents.	Integrating with active travel network can promote use of sustainable modes of transport and increase the physical activity level of the public.	The policy has negative effects as there is no reference to enhancement and restoration, whereas the policy aims to protect the Peak District National Park.	The policy could make more explicit reference to enhancement and restoration measures on top of protection of the Peak District National Park.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	T	Green and blue infrastructure, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to multifunctional green and blue infrastructure, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	T	Green and blue infrastructure, natural environment, built environment, local communities	N/A	N/A	The policy has neutral effects as there is no reference to access to green and blue infrastructure, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	D	T	Habitats, biodiversity, natural environment	Protecting the Peak District National Park can maintain access to natural beautry and improve the health and well- being levels of local residents.	Integrating with active travel network can promote use of sustainable modes of transport and increase the physical activity level of the public.	The policy has positive effects as there is reference to safegaurding the Peak District National Park from new developments, which includes local wildlife-rich habitats.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	T	Peatlands, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	T	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	P	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	T	Flood risk, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	T	Flood risk, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	T	Water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water quality, natural environment, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water management infrastructrue, built environment	N/A	N/A	The policy has neutral effects as there is no reference to water management, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	+	+	+	D	T	Built environment, water quality, natural environment	Protecting the Peak District National Park can maintain access to natural beautry and improve the health and well- being levels of local residents.	Integrating with active travel network can promote use of sustainable modes of transport and increase the physical activity level of the public.	The policy has positive effects as there is reference to accessing impacts and restricting new developments, which could minimise the risk of pollution.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water efficiency, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas emissions, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	++	++	D	T	Landscape, natural environment	Restricting harmful development helps prevent incremental degradation of the Peak District's natural beauty, wildlife, and cultural heritage over time, maintaining its setting and character.	When combined with complementary policies on landscape, biodiversity, and design, this approach amplifies protection and can enhance the distinctiveness of the National Park's setting.	The policy has positive effects as it supports the criterias intent by prioritising protection of the Park's setting and qualities	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	++	++	D	T	Landscape, natural environment	Restricting harmful development helps prevent incremental degradation of the Peak District's natural beauty, wildlife, and cultural heritage over time, maintaining its setting and character.	When combined with complementary policies on landscape, biodiversity, and design, this approach amplifies protection and can enhance the distinctiveness of the National Park's setting.	The policy has positive effects as it supports the criterias intent by prioritising protection of the Park's setting and qualities	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	++	++	D	T	Landscape, natural environment	Restricting harmful development helps prevent incremental degradation of the Peak District's natural beauty, wildlife, and cultural heritage over time, maintaining its setting and character.	When combined with complementary policies on landscape, biodiversity, and design, this approach amplifies protection and can enhance the distinctiveness of the National Park's setting.	The policy has positive effects as it supports the criterias intent by prioritising protection of the Park's setting and qualities	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	+	I	T	Landscape, natural environment	Restricting harmful development helps prevent incremental degradation of the Peak District's natural beauty, wildlife, and cultural heritage over time, maintaining its setting and character.	When combined with complementary policies on landscape, biodiversity, and design, this approach amplifies protection and can enhance the distinctiveness of the National Park's setting.	The policy has positive effects as it supports the criterias intent by prioritising protection of the Park's setting and qualities	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	+	D	T	Historic environment	Protecting the Peak District National Park can maintain access to natural beautry and improve the health and well- being levels of local residents.	Integrating with active travel network can promote use of sustainable modes of transport and increase the physical activity level of the public.	The policy has positive effects as there is reference to protecting cultural heritage.	The policy could make more explicit reference to enhancing the qualities on top of protection of cultural heritage.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	T	Soil resources, natural environment, built environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	T	Soil resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	T	Built environment, soil resource, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	T	Soil resource, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to eat, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	T	Natural resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	T	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	T	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting Peak District National Park from new developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	T	Waste management facilities, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting Peak District National Park from new developments.	None identified.

Policy Name	HSP PE7: Early years, schools and post-16 education facilities

Ref	Objective	Assessement Criteria	ST (0-4 years)	MT (5-9 years)	LT (10+ years)	Direct or Indirect	Temporary or Permenant	Receptors and/or Affected Groups	Potential Cumulative Effects	Potential Synergistic Effects	Explaination Against Objective	Mitigation/Enhancement
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on education.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on education.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on education.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Local population, housing land, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on education.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	T	Built environment, housing stock, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on education.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	T	Vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on education.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local population, emloyment land	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on education	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	+	++	++	D	T	Local population, local economy	Improved education facilities across Tameside can collectively strengthen workforce skills, supporting future economic growth and reducing skills gaps over time	Combining improved education facilities with targeted skills training initiatives can accelerate workforce development and strengthen economic growth	The policy has positive effects as it strengthens education infrastructure and accessibility, supporting the development of a suitable labour force for future growth	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local population, built environment, employment land	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on education	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	+	I	T	Local population, local economy	Expanding education facilities across Tameside can collectively strengthen skills and knowledge, enabling a more diverse and resilient local economy	Combining improved education provision with business support and innovation policies can accelerate economic diversification and create new growth sectors	The policy is neutral with slight positive effects as the policy strengthens education and skills, which can indirectly support economic diversification, but does not directly influence economic sectors or land use.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	T	Built environment, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on education	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on education	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Local population, transport network, built environment	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on education	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, utilities, digital infrastructure, built environment	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on education.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	+	+	D	T	Local population, transport network, natural environment	New schools across the borough collectively increase demand on local roads and public transport.	A new school combined with an active travel strategy could significantly boost cycling and walking uptake beyond what either policy would achieve alone.	The policy has positive effects as it supports sustainable and active travel by requiring access to public transport and active travel modes for new facilities.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	T	Local population, transport network, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on education	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	+	+	I	T	Local population, transport network, natural environment	New schools across the borough collectively increase demand on local roads and public transport.	A new school combined with an active travel strategy could significantly boost cycling and walking uptake beyond what either policy would achieve alone.	The policy has positive effects as it supports sustainable and active travel by requiring access to public transport and active travel modes for new facilities.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	+	I	T	Local population, transport network, natural environment	Gradual improvements in education access and quality will collectively enhance skills and employment prospects, reducing deprivation over time	Works with housing, transport, and health policies to amplify benefits, creating a supportive environment that accelerates reduction in deprivation.	The policy has slight positive effects as it improved educational access and quality, the policy directly adresses one of the root causes of deprivation which is lack of education and skills. Over time this can reduce poverty and improve opportunities	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	+	I	T	Local population, transport network, natural environment	Gradual improvements in education access and quality will collectively enhance skills and employment prospects, reducing deprivation over time	Works with housing, transport, and health policies to amplify benefits, creating a supportive environment that accelerates reduction in deprivation.	The policy has slight positive effects as it improved educational access and quality, the policy directly adresses one of the root causes of deprivation which is lack of education and skills. Over time this can reduce poverty and improve opportunities	The policy could be enhanced by making explicit reference to the Indices of Multiple Deprivation
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	+	I	T	Local population, vulnerable groups	Repeated community engagement through shared educational and recreational spaces gradually strengthens social cohesion and mutual understanding	Works with cultural, leisure, and health policies to amplify social integration and inclusivity	The policy has positive effects as it actively supports opportunities for shared spaces and inclusive access, which can foster good relations between different people	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	+	I	T	Local population, vulnerable groups, built environment	improved accessibility and quality of education facilities reduce structural barriers, ensuring that all groups benefit equally from educational and community resources	Works with cultural, leisure, and health policies to amplify social integration and inclusivity	The polcy has positive effects as it actively promotes access and opportunity through location, design and community integration	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, vulnerable groups	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on education.	The policy could be enhanced by making referencing to the equality act and require accessible design for people with disabilities
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to the needs of different areas, however the policy is focused on education.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local communities, built environment	Repeated community engagement through shared educational and recreational spaces gradually strengthens social cohesion and mutual understanding	Works with cultural, leisure, and health policies to amplify social integration and inclusivity	The policy has positive effects as it actively supports opportunities for shared spaces and inclusive access, which can foster good relations between different people	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	I	T	Local population, local communities	increased opportunities for active travel and community sports participation foster healthier lifestyles, reduce health inequalities, and improve overall wellbeing across Tameside	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as it encourages active travel and community use of playing fields and sports facilities which promotes physical activity and wellbeing	The polocy could be enhanced by requiring education facilities to include dedicated spaces for physical activity and wellbeing programs accessible to the wider community, promoting proactive health and active lifestyles
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health inequalities, however the policy is focused on education.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	-	--	D	T	Natural environment, green and blue infrastructure	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has negative effects as there is no reference to increasing the quantity and quality of active environments, whereas the policy aims to protect outdoor sport and recreational facilities.	The policy could make more explicit reference to increasing the quantity and quality on top of safeguarding outdoor sport and recreational facilities for educational facilities.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	D	T	Local communities, built environment, green and blue infrastructure	Ensuring sufficient provision of sports and recreational facilities can foster stronger community bonds by providing spaces for social interaction.	Integrating with residential and employment developments can promote physical activity and lead to improved public health.	The policy has positive effects as there is reference to provide community use of playing fields ,which promotes access to leisure and recreational facilities.	The policy could make more explicit reference to increasing the quantity and quality on top of safeguarding outdoor sport and recreational facilities for educational facilities.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on education.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, health facilities, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to healthcare faciliites, however the policy is focused on education.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	D	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	improved accessibility and strategic reuse of sites ensure that educational facilities remain well-distributed and inclusive, reducing barriers	creating integrated networks and inclusive environments that guarantee equitable access to education for all age groups.	The policy has positive effects as it requires new education faciltiies to be highly accessible to their intended catchments	
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	D	T	Local communities, built environment, social infrastructure	community access to shared sports and recreational facilities strengthens social networks, encourages physical activity, and improves wellbeing across Tameside	creating inclusive spaces that support both education and community cohesion, delivering greater social and wellbeing benefits	The policy has positive effects as it encourages community uses such as playing fields and other facilities which directly supports access to social infrastructure and recreational spaces	The policy could be enhanced by inlcuding reference for new education facilities to include multi-use sports areas and playgrounds designed for community access, ensuring inclusive recreational opportunities for all age groups.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	+	+	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	Consistent investment in accessible, high-quality education facilities enhances attainment levels for children across Tameside, reducing educational inequalities and improving long-term life chances	creating inclusive, well-connected learning environments that support both academic achievement and social development	The policy has positive effects as it requiers high quality education facilities and ensures accessibility for catchments	Require new and improved education facilities to incorporate targeted support programs, inclusive learning environments, and digital resources to ensure all children can access high-quality education
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	+	+	+	D	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	better education facilities and inclusive access lead to higher attainment and skill development, improving employability and economic resilience	Combined with employment, training, and economic development strategies to amplify workforce skills and create a more competitive local economy	The policy has positive effects as it directly improves education infrastructure and accessibility which are important for raising skill levels across all backgrounds	The policy could be enhanced by including provisions for community access to education facilities
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	T	Local communities, transport network, built environment	N/A	N/A	The policy has neutral effects as it does not reduce the need to travel, however the policy is focused on education	None identified.

9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	+	I	T	Local population, transport network, natural environment	Prioritising public transport for education facilities reduces car dependency and supports sustainable travel patterns	Combined with transport and climate strategies the policies can create integrated networks that support active travel	The policy has slight positive effects as it promotes public transport use and reduces reliance on private cars	The policy could be enhanced by requireing safe walking and cycling routes
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	+	+	I	T	Transport network, natural environment	improved accessibility by walking, cycling, and public transport reduces car dependency, lowers emissions, and promotes healthier lifestyles	Combined with transport and climate strategies the policies can create integrated networks that support active travel	The policy has positive effects as it explicitly prioritises sustainable and active transport modes	The policy could be enhanced by requireing safe walking and cycling routes
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	T	Air quality, local population, designated sites, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on education.	None identified.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	T	Air quality, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on education.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	T	Air quality, built environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on education.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on education.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on education.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	T	Green and blue infrastructure, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on education.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	T	Green and blue infrastructure, natural environment, built environment, local communities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on education.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	T	Habitats, biodiversity, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to ecological networks, however the policy is focused on education.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on education.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on education.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	T	Peatlands, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on education.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	T	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on education.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on education.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on education.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on education.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on education.	None identified.

13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	P	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on education.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	T	Flood risk, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on education.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	T	Flood risk, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on education.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	T	Water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on education.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water quality, natural environment, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on education.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water management infrastructrue, built environment	N/A	N/A	The policy has neutral effects as there is no reference to water management, however the policy is focused on education.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to pollution, however the policy is focused on education.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on education.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on education.	None identified.

15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas, however the policy is focused on education.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on education.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	o	o	o	I	T	Landscape, natural environment, public realm, open spaces	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on education.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on education.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	o	o	o	I	T	Local character, Peak District National Park	N/A	N/A	The policy has neutral effects as there is no reference to local character, however the policy is focused on education	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	o	o	o	I	T	Landscape, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on education.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on education.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on education.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on education.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on education.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on education.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on education.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on education.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on education.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on education.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on education.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on education.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on education.	None identified.

Policy Name	HSP PE8: Provision of health and social care facilities											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on health and social care facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on health and social care facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on health and social care facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Local population, housing land, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on health and social care facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	T	Built environment, housing stock, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on health and social care facilities.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	T	Vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on health and social care facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local population, emloyment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on provision of health and social care facilities.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on provision of health and social care facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local population, built environment, employment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on provision of health and social care facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on provision of health and social care facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	T	Built environment, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on provision of health and social care facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	-	-	I	P	Local population, utilities, digital infrastructure, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy has slight negative effects as it does not address transport infrastructure. The merging of health facilities may increase travel distances for residents	The policy could make more explicit reference to improving transport accessibility, such as enhancing public transport and active travel links to consolidated health facilities.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	+	I	P	Local population, utilities, digital infrastructure, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy has slight positive effects as it references accessibility.	The policy could make more explicit reference to improving transport accessibility, such as enhancing public transport and active travel links to consolidated health facilities.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, utilities, digital infrastructure, built environment	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on provision of health and social care facilities.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	-	-	I	P	Local population, utilities, digital infrastructure, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy has slight negative effects as it does not address transport infrastructure. The merging of health facilities may increase travel distances for residents	The policy could make more explicit reference to improving transport accessibility, such as enhancing public transport and active travel links to consolidated health facilities.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	-	-	I	P	Local population, utilities, digital infrastructure, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy has slight negative effects as it does not address transport infrastructure. The merging of health facilities may increase travel distances for residents	The policy could make more explicit reference to improving transport accessibility, such as enhancing public transport and active travel links to consolidated health facilities.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	-	-	I	P	Local population, utilities, digital infrastructure, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy has slight negative effects as it does not address transport infrastructure. The merging of health facilities may increase travel distances for residents	The policy could make more explicit reference to improving transport accessibility, such as enhancing public transport and active travel links to consolidated health facilities.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	+	+	I	T	Local population, lower socio-economic groups and deprived areas	Reduce levels of deprivation.	Improvements in health and social infrastructure and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in health and social care facilities can help reduce health related deprivation and improve quality of life for disadvantaged communities	The policy could be enhanced by making explicit reference to targeting areas with high health inequalities to maximise its impact on deprivation
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	+	+	I	T	Local population, lower socio-economic groups and deprived areas	Reduce levels of deprivation.	Improvements in health and social infrastructure and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in health and social care facilities can help reduce health related deprivation and improve quality of life for disadvantaged communities	The policy could be enhanced by making explicit reference to targeting areas with high health inequalities to maximise its impact on deprivation
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	+	I	T	Local population, vulnerable groups	Ensuring sufficient provision of health and social care facilities can foster stronger community bonds by providing spaces for social interaction	Integrated with housing and leisure initiatives, improved health facilities could amplify opportunities for social interaction and community building.	The policy has positive effects as improved health and social care facilities can create shared spaces and foster community interaction, supporting good relations between different people	The policy could be enhanced by making more explicit reference to ensuring inclusive access and community engagement in consolidated facilities
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	-	-	D	T	Local population, vulnerable groups, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Integrated with housing and leisure initiatives, improved health facilities could amplify disparities in access to essential services.	The policy has negative effects as even though it seeks to maintain accessibility, merging facilities could disadvantage those with limited mobility or transport options over time	The policy could be enhanced by making more explicit reference to inclusive design and transport provision to ensure equal access for all residents
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	-	-	D	T	Local population, vulnerable groups	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Integrated with housing and leisure initiatives, improved health facilities could amplify disparities in access to essential services.	The policy has negative effects as even though it seeks to maintain accessibility, merging facilities could disadvantage those with limited mobility or transport options over time	The policy could be enhanced by making more explicit reference to inclusive design and transport provision to ensure equal access for all residents

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	-	-	I	T	Local communities, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Integrated with housing and leisure initiatives, improved health facilities could amplify disparities in access to essential services.	The policy has negative effects as even though it seeks to maintain accessibility, merging facilities could disadvantage those with limited mobility or transport options over time	The policy could be enhanced by making more explicit reference to inclusive design and transport provision to ensure equal access for all residents
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, vulnerable groups	Ensuring sufficient provision of health and social care facilities can foster stronger community bonds by providing spaces for social interaction	Integrated with housing and leisure initiatives, improved health facilities could amplify opportunities for social interaction and community building.	The policy has positive effects as improved health and social care facilities can create shared spaces and foster community interaction, supporting good relations between different people	The policy could be enhanced by making more explicit reference to ensuring inclusive access and community engagement in consolidated facilities
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	++	++	I	T	Local population, vulnerable groups	Ensuring sufficient provision of health and social care facilities can foster stronger community bonds by providing spaces for social interaction	Integrated with housing and leisure initiatives, improved health facilities could amplify opportunities for social interaction and community building.	The policy has positive effects as improved health and social care facilities can create shared spaces and foster community interaction, supporting good relations between different people. Co-located health facilities and health care provision will also have benefits for active travel.	The policy could be enhanced by making more explicit reference to ensuring inclusive access and community engagement in consolidated facilities
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	+	+	+	I	T	Local population, local communities	Reduce levels of deprivation.	Improvements in health and social infrastructure and in turn, improvements in health and wellbeing.	The policy has positive effects as improvements in health and social care facilities can help reduce health related deprivation and improve quality of life for disadvantaged communities	The policy could be enhanced by making explicit reference to targeting areas with high health inequalities to maximise its impact on deprivation
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	T	Natural environment, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it doesn't address access to green or blue infrastructure or leisure facilities, however the policy is focused on provision of health and social care facilities	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	D	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as it doesn't address access to green or blue infrastructure or leisure facilities, however the policy is focused on provision of health and social care facilities	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on provision of health and social care facilities.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	+	+	D	P	Local population, local communities, health facilities, lower socio-economic groups and deprived areas	Improved health facilities can reduce health inequalities and improve well-being for socio-economic groups	Integating with housing and transport initiatives could amplify efforts to ensure equitable access to healthcare and wellbeing assets	The policy has positive effects as it supports improved health facilities for all	The policy could be enhanced by making more explicit reference to prioritising accessibility for deprived communities and ensuring transport provision
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on provision of health and social care facilities.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on health and social care facilites.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on provision of health and social care facilities.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on provision of health and social care facilities.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	-	-	I	P	Local communities, transport network, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy is Initially neutral as accessibility is maintained during transition, but medium- to long-term impacts may become negative if facility mergers increase travel distances without strong local provision or transport links.	The policy could be enhanced by including measures to maintain local accessibility
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	-	-	I	T	Local communities, transport network, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy is Initially neutral as accessibility is maintained during transition, but medium- to long-term impacts may become negative if facility mergers increase travel distances without strong local provision or transport links.	The policy could be enhanced by including measures to maintain local accessibility
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	-	-	I	T	Local communities, transport network, built environment	Consolidating health and social care facilities may gradually increase reliance on transport networks as residents travel farther for services. Over time, this could compound accessibility challenges and place sustained pressure on local transport infrastructure.	Combining the consolidation of health facilities with housing and employment growth could intensify transport demand, leading to greater pressure on connectivity and accessibility	The policy is Initially neutral as accessibility is maintained during transition, but medium- to long-term impacts may become negative if facility mergers increase travel distances without strong local provision or transport links.	The policy could be enhanced by including measures to maintain local accessibility

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	T	Air quality, local population, designated sites, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on provision of health and social care facilities.	None identified.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	T	Air quality, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on provision of health and social care facilities.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	T	Air quality, built environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on provision of health and social care facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on provision of health and social care facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on provision of health and social care facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	T	Green and blue infrastructure, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on provision of health and social care facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	T	Green and blue infrastructure, natural environment, built environment, local communities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on provision of health and social care facilities.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	T	Habitats, biodiversity, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to ecological networks, however the policy is focused on provision of health and social facilities.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on provision of health and social care facilities.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on provision of health and social care facilities.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	T	Peatlands, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on provision of health and social care facilities.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	T	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on ensuring sufficient provision of outdoor sports and recreational facilities.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on provision of health and social care facilities.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on provision of health and social care facilities.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on provision of health and social care facilities.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on provision of health and social care facilities.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	P	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on provision of health and social care facilities.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	T	Flood risk, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on provision of health and social care facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	T	Flood risk, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on provision of health and social care facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	T	Water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on provision of health and social care facilities.	None identified.

14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water quality, natural environment, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on provision of health and social care facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water management infrastructrue, built environment	N/A	N/A	The policy has neutral effects as there is no reference to water management, however the policy is focused on provision of health and social care facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to pollution, however the policy is focused on provision of health and social care facilities.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on provision of health and social care facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on provision of health and social care facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on provision of health and social care facilities.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas, however the policy is focused on provision of health and social care facilites.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on health and social care facilities.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on heath and social care facilities.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on health and social care facilities.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	o	o	o	I	T	Landscape, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on health and social care facilities .	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	o	o	o	I	T	Landscape, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to design, however the policy is focused on health and social care facilities .	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on health and social care facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on health and social care facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on health and social care facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on health and social care facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on health and social care facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on health and social care facilities.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on health and social care facilities.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on health and social care facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on health and social care facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on health and social care facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on health and social care facilities.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on health and social care facilities.	None identified.

Policy Name	HSP PE9: Tameside General Hospital

Ref	Objective	Assessement Criteria	ST (0-4 years)	MT (5-9 years)	LT (10+ years)	Direct or Indirect	Temporary or Permenant	Receptors and/or Affected Groups	Potential Cumulative Effects	Potential Synergistic Effects	Explaination Against Objective	Mitigation/Enhancement
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on Tameside General Hospital.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on Tameside General Hospital.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Local population, housing market, housing land	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on Tameside General Hospital.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Local population, housing land, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on Tameside General Hospital.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	T	Built environment, housing stock, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on Tameside General Hospital.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	T	Vulnerable groups, built environment	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on Tameside General Hospital.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local population, emloyment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on Tameside General Hospital.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	+	+	+	I	T	Local population, emloyment land	As the hospital estate evolves, recurring cohorts of apprentices, trainees and students can cumulatively expand the skilled health and care workforce, with spillover benefits to related sectors.	Integration within the Greater Manchester care system can synergise with FE/HE partnerships and employer-led programmes, aligning clinical training capacity with regional workforce needs.	The policy has positive effects as by enhancing a key NHS facility likely to host placements and apprenticeships, PE9 can support skills development for the local labour force; however, it contains no explicit commitments to education and training.	The policy could be enhanced by providing or safeguarding on-site education and training spaces
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local population, built environment, employment land	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on Tameside General Hospital.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	T	Local population, local economy	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on Tameside General Hospital.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	T	Built environment, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on Tameside General Hospital.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	+	I	P	Local population, utilities, digital infrastructure, built environment	Sustained modal shift and coordinated site management cumulatively ease local network pressures around the hospital, improving efficiency and reducing congestion	Encouraging public transport, walking and cycling works to streamline hospital access and reduce car demand	The policy has positive effects as it promotes sustainable access and minimises local traffic/parking impacts, contributing to network support at the hospital	The policy could be enhanced by including a requirement for a Transport Assessment/Travel Plan
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	+	I	P	Local population, utilities, digital infrastructure, built environment	Sustained modal shift and coordinated site management cumulatively ease local network pressures around the hospital, improving efficiency and reducing congestion	Encouraging public transport, walking and cycling works to streamline hospital access and reduce car demand	The policy has positive effects as it promotes sustainable access and minimises local traffic/parking impacts, contributing to network support at the hospital	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Local population, utilities, digital infrastructure, built environment	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on Tameside General Hospital.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	++	++	++	D	P	Local population, utilities, digital infrastructure, built environment	By promoting walking and cycling alongside better access to preventative care, the combined measures reduce long-term health risks and support healthier lifestyles	Promoting active travel complements preventative healthcare by encouraging physical activity, while integrated hospital services ensure timely interventions. Together, these measures create a stronger foundation for improving determinants of health than if implemented in isolation.	The policy is positive as it focuses on supporting healthier, active lifestyles and preventative care. It promotes walking and cycling and strengthens the hospital's integration within the Greater Manchester care system, which facilitates proactive healthcare and indirectly supports improvements in health determinants.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	+	I	P	Local population, utilities, digital infrastructure, built environment	By promoting walking and cycling alongside better access to preventative care, the combined measures reduce long-term health risks and support healthier lifestyles	Promoting active travel complements preventative healthcare by encouraging physical activity, while integrated hospital services ensure timely interventions. Together, these measures create a stronger foundation for improving determinants of health than if implemented in isolation.	The policy is positive as it focuses on supporting healthier, active lifestyles and preventative care. It promotes walking and cycling and strengthens the hospital's integration within the Greater Manchester care system, which facilitates proactive healthcare and indirectly supports improvements in health determinants.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	++	++	++	D	P	Local population, utilities, digital infrastructure, built environment	By promoting walking and cycling alongside better access to preventative care, the combined measures reduce long-term health risks and support healthier lifestyles	Promoting active travel complements preventative healthcare by encouraging physical activity, while integrated hospital services ensure timely interventions. Together, these measures create a stronger foundation for improving determinants of health than if implemented in isolation.	The policy is positive as it focuses on supporting healthier, active lifestyles and preventative care. It promotes walking and cycling and strengthens the hospital's integration within the Greater Manchester care system, which facilitates proactive healthcare and indirectly supports improvements in health determinants.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	+	+	I	T	Local population, lower socio-economic groups and deprived areas	Improved health outcomes and easier access to services can cumulatively reduce some aspects of deprivation	The policy's integration of hospital services and promotion of sustainable travel work together to improve health and mobility, indirectly supporting efforts to reduce deprivation.	The policy has positive effects as it supports improved healthcare access and active travel, which indirectly reduces deprivation	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	+	+	I	T	Local population, lower socio-economic groups and deprived areas	Improved health outcomes and easier access to services can cumulatively reduce some aspects of deprivation	The policy's integration of hospital services and promotion of sustainable travel work together to improve health and mobility, indirectly supporting efforts to reduce deprivation.	The policy has positive effects as it supports improved healthcare access and active travel, which indirectly reduces deprivation	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, vulnerable groups	N/A	N/A	The policy has neutral effects as it does not include measures specifically aimed at promoting social cohesion or community interaction. However, the policy is focused on Tameside General Hospital	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	+	I	T	Local population, vulnerable groups, built environment	Integrated care and improved non-car access routes cumulatively broadens access to hospital services across socio-economic groups, gradually narrowing access gaps	Encouraging public transport, walking and cycling works together with an integrated care model, so service improvements and easier, lower-cost travel reinforce each other to widen equitable access more than either measure alone.	The policy has positive effects as it supports equal access by enhancing a universal healthcare facility and encouraging non-car travel, improving accessibility for those without private vehicles; however, it lacks explicit commitments to inclusive design or targeted measures for disadvantaged groups.	The policy could be enhanced by explicitly requiring inclusive design, accessible wayfinding for disadvantaged groups

5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, vulnerable groups	N/A	N/A	The policy has neutral effects as while NHS services are universally accessible, the policy does not explicitly reference Equality Act compliance or measures to prevent discrimination.	The policy could be enhanced by referencing the Equality Act compliance or measures to prevent discrimination.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as it does not include explicit measures to ensure equal access for urban, suburban, urban fringe and rural communities	The policy could be enhanced by including measures such as demand-responsive transport links, park-and-ride, and targeted travel assistance
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, vulnerable groups	Ensuring sufficient provision of health and social care facilities can foster stronger community bonds by providing spaces for social interaction	Integrated with housing and leisure initiatives, improved health facilities could amplify opportunities for social interaction and community building.	The policy has positive effects as improved health and social care facilities can create shared spaces and foster community interaction, supporting good relations between different people	The policy could be enhanced by making more explicit reference to ensuring inclusive access and community engagement in consolidated facilities
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	++	++	++	D	P	Local population, vulnerable groups	By promoting walking and cycling alongside better access to preventative care, the combined measures reduce long-term health risks and support healthier lifestyles	Promoting active travel complements preventative healthcare by encouraging physical activity, while integrated hospital services ensure timely interventions. Together, these measures create a stronger foundation for improving determinants of health than if implemented in isolation.	The policy is positive as it focuses on supporting healthier, active lifestyles and preventative care. It promotes walking and cycling and strengthens the hospital's integration within the Greater Manchester care system, which facilitates proactive healthcare and indirectly supports improvements in health determinants.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	+	+	+	I	T	Local population, local communities	Reduce levels of deprivation.	Improvements in health and social infrastructure and in turn, improvements in health and wellbeing.	The policy has positve effects on reducing health inequalities by enhancing access to healthcare through improved hospital facilities and integration within the Greater Manchester care system. However, it does not explicitly include targeted measures for disadvantaged groups, so the impact is assessed as a single positive	The policy could be enhanced by making explicit reference to targeting areas with high health inequalities to maximise its impact on deprivation
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	T	Natural environment, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it doesn't address access to green or blue infrastructure or leisure facilities, however the policy is focused on Tameside General Hospital.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	D	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as it doesn't address access to green or blue infrastructure or leisure facilities, however the policy is focused on Tameside General Hospital.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on Tameside General Hospital.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	++	++	++	D	P	Local population, local communities, health facilities, lower socio-economic groups and deprived areas	Improved health facilities can reduce health inequalities and improve well-being for socio-economic groups	Integating with housing and transport initiatives could amplify efforts to ensure equitable access to healthcare and wellbeing assets	The policy is positive as it ensures people are adequately served by key healthcare facilities. It supports the continued enhancement of Tameside General Hospital and its integration within the Greater Manchester care system, promoting equitable access to healthcare services regardless of socio-economic status.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on Tameside General Hospital.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	T	Vulnerable groups, lower socio-economic groups and deprived areas, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on Tameside General Hospital.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on Tameside General Hospital.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, vulnerable groups, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on Tameside General Hospital.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	+	D	P	Local communities, transport network, built environment	Sustainable transport and better site planning together support long term sustainability goals	Promoting sustainable transport complements efforts to minimise traffic impacts, creating a more integrated, accessible and environmentally sustainable hospital site	The policy has positive effects as it promotes efficient patterns of movement by encouraging sustainable transport modes. However, it does not reduce the need to travel, as hospital visits remain necessary, so the impact is assessed as a single positive	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	+	D	P	Local communities, transport network, built environment	Sustainable transport and better site planning together support long term sustainability goals	Promoting sustainable transport complements efforts to minimise traffic impacts, creating a more integrated, accessible and environmentally sustainable hospital site	The policy is positive as it explicitly promotes public transport, cycling and walking for staff, patients and visitors which will reduce car dependancy and emissions over time.	The policy could be enhanced by explicitly referring to safety or improvements to the transport network
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	++	++	++	D	P	Local communities, transport network, built environment	Sustainable transport and better site planning together support long term sustainability goals	Promoting sustainable transport complements efforts to minimise traffic impacts, creating a more integrated, accessible and environmentally sustainable hospital site	The policy is positive as it explicitly promotes public transport, cycling and walking for staff, patients and visitors which will reduce car dependancy and emissions over time.	None identified.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	T	Air quality, local population, designated sites, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on Tameside General Hospital.	None identified.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	T	Air quality, built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on Tameside General Hospital.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	T	Air quality, built environment	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on Tameside General Hospital.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on Tameside General Hospital.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	T	Designated sites, natural environment, biodiversity	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on Tameside General Hospital.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	T	Green and blue infrastructure, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on Tameside General Hospital.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	T	Green and blue infrastructure, natural environment, built environment, local communities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on Tameside General Hospital.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	T	Habitats, biodiversity, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to ecological networks, however the policy is focused on Tameside General Hospital.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	T	Local communities, built environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on Tameside General Hospital.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on Tameside General Hospital.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	T	Peatlands, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on Tameside General Hospital.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	T	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on Tameside General Hospital.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on Tameside General Hospital.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on Tameside General Hospital.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on Tameside General Hospital.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	T	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on Tameside General Hospital.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	P	Built environment, natural environment, flood risk	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on Tameside General Hospital.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	T	Flood risk, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on Tameside General Hospital.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	T	Flood risk, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on Tameside General Hospital.	None identified.

14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	T	Water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on Tameside General Hospital.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water quality, natural environment, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on Tameside General Hospital.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water management infrastructrue, built environment	N/A	N/A	The policy has neutral effects as there is no reference to water management, however the policy is focused on Tameside General Hospital.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to pollution, however the policy is focused on Tameside General Hospital.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Built environment, water quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on Tameside General Hospital.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on Tameside General Hospital.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on Tameside General Hospital.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	T	Built environment, air quality, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas, however the policy is focused on Tameside General Hospital.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on Tameside General Hospital.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on Tameside General Hospital.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on Tameside General Hospital.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	o	o	o	I	T	Landscape, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on Tameside General Hospital .	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	o	o	o	I	T	Landscape, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to design, however the policy is focused on Tameside General Hospital.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	o	o	o	I	T	Historic environment	N/A	N/A	The policy has neutral effects as there is no reference to historic environment, however the policy is focused on Tameside General Hospital.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on Tameside General Hospital.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on Tameside General Hospital.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on Tameside General Hospital.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on Tameside General Hospital.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on Tameside General Hospital.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	T	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on Tameside General Hospital.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on Tameside General Hospital.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on Tameside General Hospital.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on Tameside General Hospital.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on Tameside General Hospital.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	T	Physical resources, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on Tameside General Hospital.	None identified.

Policy Name	HSP T1: General Approach											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on the general approach to travel.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on the general approach to travel.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on the general approach to travel.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	++	D	P	Built environment, housing market, local population	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references enabling access to employment, services, and leisure.	The policy could be enhanced by referencing access to centres and green space.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on the general approach to travel.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on the general approach to travel.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on the general approach to travel.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on the general approach to travel.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	+	D	P	Local economy, local population, transport infrastructure	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references enabling access to employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on the general approach to travel.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on the general approach to travel.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references improving transport infrastructure and services in phases to support delivery.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references improving transport infrastructure to provide access to, from and within Tameside.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on the general approach to travel.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references supporting sustainable travel behaviour and enabling a model shift to public transport, walking, wheeling, and cycling.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Integrating sustainable transport options like public transit, cycling, and walking can reduce pollution and promote healthier communities	The policy has positive effects as it references providing safe access across Tameside, and supports sustainable travel modes.	The policy could be enhanced by making explicit reference to safety on public transport, and the health benefits of sustainable modes.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Integrating sustainable transport options like public transit, cycling, and walking can reduce pollution and promote healthier communities	The policy has positive effects as it references supporting sustainable travel behaviour and enabling a modal shift to public transport, walking, wheeling, and cycling.	The policy could be enhanced by referencing how the modal shift will be encouraged i.e. through the creation of new routes.

4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on the general approach to travel.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on the general approach to travel.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on the general approach to travel.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	++	D	P	Local population, local communities	Inclusive transport fosters social cohesion by enabling all community members to participate in social, cultural, and economic activities	Enhance the overall quality of life by reducing travel barriers and promoting independence for individuals with mobility challenges	The policy has positive effects as it references improving access across Tameside, especially to employment, services, and leisure, as well as supporting wheeling.	The policy could be enhanced by making explicit reference to equal access.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	+	+	++	D	T	Local population, local communities	Inclusive transport fosters social cohesion by enabling all community members to participate in social, cultural, and economic activities	Enhance the overall quality of life by reducing travel barriers and promoting independence for individuals with mobility challenges	The policy has positive effects as it references improving access across Tameside, and supporting wheeling.	The policy could be enhanced by making explicit reference to equal and inclusive access for underrepresented groups and how this will be achieved.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on the general approach to travel.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on the general approach to travel.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	D	T	Local population, local communities	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Integrating sustainable transport options like public transit, cycling, and walking can reduce pollution and promote healthier communities	The policy has positive effects as it references active travel modes which support healthier lifestyles.	The policy could be enhanced by making explicit reference to the health and air quality benefits of public transport and active travel.

6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on the general approach to travel.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on the general approach to travel.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	D	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Coordinated efforts in land use planning and transport can lead to more efficient and sustainable urban growth.	The policy has positive effects as it references enabling access to leisure.	The policy could be enhanced by making additional reference to access to green and blue infrastructure, public open space, and recreational facilities.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	+	D	P	Local population, local communities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access jobs, education, and services.	The policy has positive effects as it references providing safe access across Tameside.	The policy could be enhanced by making explicit reference to safety on public transport, and how this will be achieved.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on the general approach to travel.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	D	P	Local population, local communities, educational facilities	Increased growth without provision would lead to cumulative issues	Access to educational infrastructure supports the development of a skilled workforce, attracting businesses and driving economic growth	The policy has negative effects as it does not reference enabling access to educational facilities.	The policy could be enhanced by referencing access to educational facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	D	P	Local population, local communities, sports facilities	Increased growth without provision would lead to cumulative issues	Access to social infrastructure can create a more vibrant and healthy community, fostering a sense of belonging and well-being.	The policy has negative effects as it does not reference enabling access to community social infrastructure.	The policy could be enhanced by referencing access to community and social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference educational attainment, however the policy is focused on the general approach to travel.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference educational attainment, however the policy is focused on the general approach to travel.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Supports sustainable urban development by reducing traffic congestion and the need for extensive road infrastructure	The policy has positive effects as it references reducing the overall need to travel.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Supports sustainable urban development by reducing traffic congestion and the need for extensive road infrastructure	The policy has positive effects as it references providing safe access across Tameside and supporting a modal shift to sustainable and active modes.	The policy could be enhanced by making explicit reference to safety on public transport.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Supports sustainable urban development by reducing traffic congestion and the need for extensive road infrastructure	The policy has positive effects as it references supporting a modal shift to sustainable and active modes.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	++	I	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has positive effects as enabling a modal shift to sustainable and active transport will improve air quality.	The policy could be enhanced by making reference to the air quality benefits from modal shift to sustainable and active modes of travel.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on the general approach to travel.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on the general approach to travel.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the general approach to travel.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the general approach to travel.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the general approach to travel.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	D	P	Local population, local communities, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access green and blue infrastructure	The policy has positive effects as it references enabling access to leisure.	The policy could be enhanced by making additional reference to access to green and blue infrastructure, and the benefits this offers.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the general approach to travel.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on the general approach to travel.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on the general approach to travel.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on the general approach to travel.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on the general approach to travel.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new transport infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is protected from flooding.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on the general approach to travel.	None identified.

13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on the general approach to travel.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new transport infrastructure from flooding.	The policy could be enhanced by ensuring new road infrastructure is resilient to flooding.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on the general approach to travel.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on the general approach to travel.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on the general approach to travel.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on the general approach to travel.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on the general approach to travel.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on the general approach to travel.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on the general approach to travel.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on the general approach to travel.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on the general approach to travel.	None identified.

15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on the general approach to travel.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Energy infrastructure	Significantly reduce greenhouse gas emissions and air pollution, contributing to climate change mitigation.	Improved health and wellbeing.	The policy has positive effects as enabling a modal shift to sustainable and active transport will reduce greenhouse gas emissions.	The policy could be enhanced by making explicit reference to the benefits of sustainable and active travel, such as reducing greenhouse gas emissions.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on the general approach to travel.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on the general approach to travel.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on the general approach to travel.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on the general approach to travel.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on the general approach to travel.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on the general approach to travel.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on the general approach to travel.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on the general approach to travel.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on the general approach to travel.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on the general approach to travel.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on the general approach to travel.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on the general approach to travel.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on the general approach to travel.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on the general approach to travel.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on the general approach to travel.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on the general approach to travel.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on the general approach to travel.	None identified.

Policy Name	HSP T2: Trunk Road Development											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on trunk road developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on trunk road developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on trunk road developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	D	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new road developments can enhance connectivity of housing land to employment land, centres and green space.	The policy could be enhanced by referencing that new road developments increase connectivity of housing land.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on trunk road developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on trunk road developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on trunk road developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on trunk road developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	++	D	P	Local economy, local population, transport infrastructure	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new road developments can enhance connectivity to employment land.	The policy could be enhanced by referencing that new road developments increase connectivity of employment land.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on trunk road developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on trunk road developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more infrastructure enhancements and sustainable alternatives are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new road developments can help to support growth and development.	The policy could be enhanced by referencing how new road infrastructure supports growth and development.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new road developments can enhance connectivity.	The policy could be enhanced by referencing the connectivity benefits of the new road developments.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digitial infrastructure, however the policy is focused on trunk road developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	-	-	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as a new road development will encourage private vehicle use, rather than a transition to sustainable and active modes.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	-	-	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as a new road development will encourage private vehicle use, increasing greenhouse gas emissions which are bad for the environment and public health.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	O	O	O	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference walking and cycling, however the policy is focused on trunk road developments.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on trunk road developments.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on trunk road developments.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on trunk road developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on trunk road developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on trunk road developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on trunk road developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on trunk road developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	?	?	?	D	T	Local population, local communities	Less private vehicle use and more use of active and sustainable modes of transport will support improvements in determinants of health	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has uncertain effects as whilst a new road will induce demand and encourage private vehicle use, the policy also highlights the need for appropriate infrastructure to support different vehicle types and segregate more dangerous roads. This will lead to a safer, lower carbon network overall	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on trunk road developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on trunk road developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access health and wellbeing facilities	The policy has positive effects as improved road infrastructure will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure, public open space, and recreational facilities.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on trunk road developments.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on trunk road developments.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	I	P	Local population, local communities, educational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved road infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to educational facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	I	P	Local population, local communities, sports facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved road infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to community and social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on trunk road developments.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on trunk road developments.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	-	-	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as a new road development will not reduce the need to travel.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	-	-	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as a new road development will not reduce the reliance on private motor vehicles.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting bus infrastructure.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	-	-	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as a new road development will not support the use of sustainable and active modes of transport.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	-	-	-	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has negative effects as a new road development will not improve air quality.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	-	-	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has negative effects as a new road development will not improve air quality.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as supporting active travel infrastructure.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on trunk road developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	-	-	D	P	Wildlife, landscapes and green and blue infrastructure	Impact on biodiversity assets may occur in combination with road development.	Conserving diverse ecosystems can improve their resilience to climate change, helping to maintain ecosystem services such as carbon sequestration, water purification, and soil health	The policy has negative effects as the alignment of the new road development to be protected passes through local Sites of Biological Importance.	The policy could be enhanced by referencing any mitigation proposed for the provision of the route, such as measures to protect and enhance biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastucture, and geodiversity, however the policy is focused on trunk road developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastucture, and geodiversity, however the policy is focused on trunk road developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	O	O	O	I	P	Local population, local communities, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastucture, and geodiversity, however the policy is focused on trunk road developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastucture, and geodiversity, however the policy is focused on trunk road developments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on trunk road developments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on trunk road developments.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on trunk road developments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on trunk road developments.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new road infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is protected from flooding.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on trunk road developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on trunk road developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new road infrastructure from flooding.	The policy could be enhanced by ensuring new road infrastructure is resilient to flooding.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on trunk road developments.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on trunk road developments.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on trunk road developments.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on trunk road developments.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on trunk road developments.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on trunk road developments.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on trunk road developments.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on trunk road developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on trunk road developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on trunk road developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	+	I	P	Energy infrastructure	Increased trips by motor vehicles will worsen the air quality over time if sustainable modes are not utilised	The adoption of advanced technologies can synergistically improve the sustainability and efficiency of freight movement	The policy has positive effects as the segragation of HGVs onto dedicated infrastructure is a critical part of Vision Zero and addressing NOX pollution.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on trunk road developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on trunk road developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on trunk road developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on trunk road developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on trunk road developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on trunk road developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on trunk road developments.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on trunk road developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on trunk road developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on trunk road developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on trunk road developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on trunk road developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on trunk road developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on trunk road developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on trunk road developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on trunk road developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on trunk road developments.	None identified.

Policy Name	HSP T3: Rail Infrastructure											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rail infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rail infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rail infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	D	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new rail developments can enhance connectivity of housing land to employment land, centres and green space.	The policy could be enhanced by referencing that new rail developments increase connectivity of housing land.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rail infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rail infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rail infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	P	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rail infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	++	D	P	Local economy, local population, transport infrastructure	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new rail developments can enhance connectivity to employment land.	The policy could be enhanced by referencing that new road developments increase connectivity of employment land.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rail infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rail infrastructure.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new rail developments can help to support growth and development.	The policy could be enhanced by referencing how new rail infrastructure supports growth and development.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new rail developments can enhance connectivity.	The policy could be enhanced by referencing the connectivity benefits of the new rail developments.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on rail infrastructure.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as trains are a sustainable mode of transport, and the provision of cycle parking supports the transition to active modes.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as trains are a sustainable mode of transport, helping to reduce greenhouse gas emissions to improve the environment and public health.	The policy could be enhanced by making explicit reference to safe rail stations and how they will be achieved.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of cycle parking supports the transition to active modes.	The policy could be enhanced by making explicit reference to providing cycle routes around stations.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on rail infrastructure.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on rail infrastructure.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference fostering good relations between people, however the policy is focused on rail infrastructure.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	++	D	P	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has positive effects as it references addressing access needs and introducing accessibility improvements.	The policy could be enhanced by making explicit reference to all new stations being fully accessible.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	+	+	++	D	T	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has positive effects as it references addressing access needs and introducing accessibility improvements.	The policy could be enhanced by making explicit reference to all new stations being fully accessible.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference the needs of different areas, however the policy is focused on rail infrastructure.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference community cohesion, however the policy is focused on rail infrastructure.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	++	D	T	Local population, local communities	Changes in travel patterns as people begin to take advantage of public transport and active travel as their main form of transport	Integrating sustainable transport options like public transit, cycling, and walking can reduce pollution and promote healthier communities	The policy has positive effects as it references cycling which supports healthier lifestyles.	The policy could be enhanced by making explicit reference to the health benefits of active travel.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on rail infrastructure.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on rail infrastructure.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access health and wellbeing facilities	The policy has positive effects as improved rail infrastructure will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure, public open space, and recreational facilities.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-	-	-	D	P	Local population, local communities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access jobs, education, and services.	The policy has negative effects as it does not reference improving safety in rail infrastructure.	The policy could be enhanced by making explicit reference to safety on public transport, and how this will be achieved.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on rail infrastructure.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	I	P	Local population, local communities, educational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved rail infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to educational facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	I	P	Local population, local communities, sports facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved rail infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to community and social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on rail infrastructure.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on rail infrastructure.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of new stations and train routes will promote efficient patterns of movement.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as trains are a sustainable mode of transport that reduce reliance on private motor vehicles.	The policy could be enhanced by making explicit reference to safe rail stations and how they will be achieved.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as trains are a sustainable mode of transport, and the provision of cycle parking supports the transition to active modes.	None identified.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	++	I	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has positive effects as trains are a sustainable mode of transport, helping to improve air quality.	The policy could be enhanced by making reference to the air quality benefits from modal shift to sustainable and active modes of travel.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	-	-	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has negative effects as it does not reference using sustainable construction practices to deliver new rail infrastructure.	The policy could be enhanced by making explicit reference to the use of sustainable construction practice to deliver new rail infrastructure.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on rail infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrasructure, and geodiversity, however the policy is focused on rail infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrasructure, and geodiversity, however the policy is focused on rail infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrasructure, and geodiversity, however the policy is focused on rail infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	I	P	Local population, local communities, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access green and blue infrastructure	The policy has positive effects as improved rail infrastructure will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure and recreational facilities.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrasructure, and geodiversity, however the policy is focused on rail infrastructure.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rail infrastructure.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rail infrastructure.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rail infrastructure.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rail infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new rail infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is protected from flooding.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rail infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rail infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new rail infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is resilient to flooding.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rail infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rail infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rail infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rail infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rail infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rail infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rail infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rail infrastructure.	None identified.

15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on rail infrastructure.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on rail infrastructure.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Energy infrastructure	Significantly reduce greenhouse gas emissions and air pollution, contributing to climate change mitigation	Improved health and wellbeing.	The policy has positive effects as trains are a sustainable mode of transport, helping to reduce greenhouse gas emissions.	The policy could be enhanced by making explicit reference to the benefits of sustainable and active travel, such as reducing greenhouse gas emissions.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on rail infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rail infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rail infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rail infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rail infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rail infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rail infrastructure.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rail infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rail infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rail infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rail infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rail infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rail infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rail infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rail infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rail infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rail infrastructure.	None identified.

Policy Name	HSP T4: Rapid Transit											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rapid transit.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rapid transit.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rapid transit.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	D	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new rapid transit developments can enhance connectivity of housing land to employment land, centres and green space.	The policy could be enhanced by referencing that new rapid transit developments increase connectivity of housing land.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rapid transit.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on rapid transit.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rapid transit.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rapid transit.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	++	D	P	Local economy, local population, transport infrastructure	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new rapid transit developments can enhance connectivity to employment land.	The policy could be enhanced by referencing that new rapid transit developments increase connectivity of employment land.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rapid transit.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on rapid transit.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new rapid transit developments can help to support growth and development.	The policy could be enhanced by referencing how new rapid transit infrastructure supports growth and development.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new rapid transit developments can enhance connectivity.	The policy could be enhanced by referencing the connectivity benefits of the new rapid transit developments.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on rapid transit.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as rapid transit is a sustainable mode of transport.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as rapid transit is a sustainable mode of transport, helping to reduce greenhouse gas emissions to improve the environment and public health.	The policy could be enhanced by making explicit reference to safe rapid transit and how this will be achieved.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	-	-	I	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as it does not reference connecting rapid transit to walking and cycling routes.	The policy could be enhanced by making explicit reference to connecting rapid transit infrastructure to walking and cycling routes.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on rapid transit.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on rapid transit.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on rapid transit.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	-	-	-	D	P	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has negative effects as it does not reference ensuring rapid transit is accessible to all.	The policy could be enhanced by making explicit reference to ensuring rapid transit infrastructure is accessible and how this will be achieved.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	-	-	-	D	T	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has negative effects as it does not reference ensuring rapid transit is accessible to all.	The policy could be enhanced by making explicit reference to ensuring rapid transit infrastructure is accessible and how this will be achieved.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on rapid transit.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on rapid transit.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on rapid transit.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on rapid transit.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on rapid transit.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access health and wellbeing facilities	The policy has positive effects as improved rapid transit infrastructure will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure, public open space, and recreational facilities.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-	-	-	D	P	Local population, local communities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access jobs, education, and services.	The policy has negative effects as it does not reference improving safety in rapid transit infrastructure.	The policy could be enhanced by making explicit reference to safety on public transport, and how this will be achieved.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on rapid transit.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	I	P	Local population, local communities, educational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved rapid transit infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to educational facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	I	P	Local population, local communities, sports facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved rapid transit infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to community and social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on rapid transit.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on rapid transit.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of new rapid transit infrastructure and routes will promote efficient patterns of movement.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as rapid transit systems are a sustainable mode of transport that reduce reliance on private motor vehicles.	The policy could be enhanced by making explicit reference to safe rapid transit and how this will be achieved.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as rapid transit systems are a sustainable mode of transport.	None identified.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	++	I	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has positive effects as rapid transit systems are a sustainable mode of transport, helping to improve air quality.	The policy could be enhanced by making reference to the air quality benefits from modal shift to sustainable and active modes of travel.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	-	-	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has negative effects as it does not reference using sustainable construction practices to deliver new rapid transit infrastructure.	The policy could be enhanced by making explicit reference to the use of sustainable construction practice to deliver new rapid transit infrastructure.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on rapid transit.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on rapid transit.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on rapid transit.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on rapid transit.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	I	P	Local population, local communities, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access green and blue infrastructure	The policy has positive effects as improved rapid transit infrastructure will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure and recreational facilities.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on rapid transit.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rapid transit.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rapid transit.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rapid transit.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on rapid transit.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new rapid transit infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is protected from flooding.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rapid transit.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rapid transit.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new rapid transit infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is resilient to flooding.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rapid transit.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on rapid transit.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rapid transit.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rapid transit.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rapid transit.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rapid transit.	None identified.

14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rapid transit.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on rapid transit.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on rapid transit.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on rapid transit.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Energy infrastructure	Significantly reduce greenhouse gas emissions and air pollution, contributing to climate change mitigation	Improved health and wellbeing.	The policy has positive effects as rapid transit systems are a sustainable mode of transport, helping to reduce greenhouse gas emissions.	The policy could be enhanced by making explicit reference to the benefits of sustainable and active travel, such as reducing greenhouse gas emissions.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on rapid transit.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rapid transit.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rapid transit.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rapid transit.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rapid transit.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on rapid transit.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rapid transit.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rapid transit.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rapid transit.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rapid transit.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rapid transit.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on rapid transit.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rapid transit.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rapid transit.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rapid transit.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rapid transit.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on rapid transit.	None identified.

Policy Name	HSP T5: Facilities for Buses											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on facilities for buses.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on facilities for buses.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on facilities for buses.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	D	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as bus priority measures can enhance connectivity of housing land to employment land, centres and green space.	The policy could be enhanced by referencing that the benefits of bus priority measures increase connectivity of housing land.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on facilities for buses.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on facilities for buses.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on facilities for buses.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on facilities for buses.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	++	D	P	Local economy, local population, transport infrastructure	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as bus prioirty measures can enhance connectivity to employment land.	The policy could be enhanced by referencing that the benefits of bus priority measures increase connectivity of employment land.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on facilities for buses.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on facilities for buses.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new bus facilities can help to support growth.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new bus facilities can enhance connectivity.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on facilities for buses.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of facilities for buses will support the transition to sustainable modes of transport.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as it references the provision of safe facilities, and buses are a sustainable mode of transport, helping to reduce greenhouse gas emissions to improve the environment and public health.	The policy could be enhanced by making explicit reference to the safety interventions that will be used at bus interchanges.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	-	-	I	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has negative effects as it does not reference connecting bus facilities to walking and cycling routes.	The policy could be enhanced by making explicit reference to connecting bus facilities to walking and cycling routes.

4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on facilities for buses.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on facilities for buses.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on facilities for buses.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	++	D	P	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has positive effects as it references the provision of accessible bus facilities.	The policy could be enhanced by making explicit reference to specific types of improvements, such as lifts and level access, for example.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	+	+	++	D	P	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has positive effects as it references the provision of accessible bus facilities.	The policy could be enhanced by making explicit reference to specific types of improvements, such as lifts and level access, for example.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on facilities for buses.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on facilities for buses.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on facilities for buses.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on facilities for buses.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on facilities for buses.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access health and wellbeing facilities	The policy has positive effects as improved bus facilities will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure, public open space, and recreational facilities.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	+	D	P	Local population, local communities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access jobs, education, and services.	The policy has positive effects as it references the provision of safe facilities.	The policy could be enhanced by making explicit reference to safety on public transport, and how this will be achieved.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on facilities for buses.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	I	P	Local population, local communities, educational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved bus facilities will improve access to different land uses.	The policy could be enhanced by referencing access to educational facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	I	P	Local population, local communities, sports facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved bus facilities will improve access to different land uses.	The policy could be enhanced by referencing access to community and social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on facilities for buses..	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on facilities for buses..	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of new bus facilities and lanes will promote efficient patterns of movement.	None identified.

9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as it references the provision of safe infrastructure, and improved bus facilities will reduce reliance on private motor vehicles.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as it promotes the use of buses which are a sustainable mode of transport.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	++	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has positive effects as buses are a sustainable mode of transport, helping to improve air quality.	The policy could be enhanced by making reference to the air quality benefits from modal shift to sustainable and active modes of travel.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	-	-	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has negative effects as it does not reference using sustainable construction practices to deliver new facilities for buses.	The policy could be enhanced by making explicit reference to the use of sustainable construction practice to deliver new facilities for buses.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on facilities for buses.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on facilities for buses.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on facilities for buses.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on facilities for buses.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	I	P	Local population, local communities, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access green and blue infrastructure	The policy has positive effects as improved bus facilities will improve access to different land uses.	The policy could be enhanced by making reference to access to green and blue infrastructure and recreational facilities.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on facilities for buses.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on facilities for buses.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on facilities for buses.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on facilities for buses.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on facilities for buses.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new bus infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is protected from flooding.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on facilities for buses.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on facilities for buses.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new bus infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is resilient to flooding.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on facilities for buses.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on facilities for buses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on facilities for buses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on facilities for buses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on facilities for buses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on facilities for buses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on facilities for buses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on facilities for buses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on facilities for buses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on facilities for buses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Energy infrastructure	Significantly reduce greenhouse gas emissions and air pollution, contributing to climate change mitigation	Improved health and wellbeing.	The policy has positive effects as buses are a sustainable mode of transport, helping to reduce greenhouse gas emissions.	The policy could be enhanced by making explicit reference to the benefits of sustainable and active travel, such as reducing greenhouse gas emissions.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on facilities for buses.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on facilities for buses.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on facilities for buses.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on facilities for buses.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on facilities for buses.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on facilities for buses.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on facilities for buses.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on facilities for buses.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on facilities for buses.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on facilities for buses.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on facilities for buses.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on facilities for buses.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on facilities for buses.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on facilities for buses.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on facilities for buses.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on facilities for buses.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on facilities for buses.	None identified.

Policy Name	HSP T6: Walking, Wheeling and Cycling											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on walking, wheeling, and cycling.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on walking, wheeling, and cycling.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on walking, wheeling, and cycling.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	D	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new walking, wheeling and cycling infrastructure can enhance connectivity of housing land to employment land, centres and green space.	The policy could be enhanced by referencing that improved walking, wheeling and cycling routes increase connectivity of housing land.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on walking, wheeling, and cycling.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on walking, wheeling, and cycling.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on walking, wheeling, and cycling.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	P	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on walking, wheeling, and cycling.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	++	D	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as new walking, wheeling and cycling infrastructure can enhance connectivity of housing land to employment land, centres and green space.	The policy could be enhanced by referencing that improved walking, wheeling and cycling routes increase connectivity of employment land.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on walking, wheeling, and cycling.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on walking, wheeling, and cycling.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new walking, wheeling, and cycling infrastructure can help to support growth, particularly when incorporated into new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as new walking, wheeling, and cycling infrastructure can enhance connectivity, particularly when incorporated into new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on walking, wheeling, and cycling.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	++	++	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of walking, wheeling and cycling infrastructure will support the transition to active travel.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as it references safety, and the provision of walking, wheeling and cycling infrastructure will reduce car dependency, improving the environment and public health.	The policy could be enhanced by making explicit reference to the safety interventions that will be used to support active travel routes, aside from maintenance of existing routes.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	++	++	++	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as it references the provision of walking, wheeling and cycling infrastructure.	None identified.

4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on walking, wheeling, and cycling.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	+	+	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has positive effects as it references increasing walking, wheeling, and cycling which supports health, which is a domain of the IMD.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on walking, wheeling, and cycling.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	++	++	++	D	P	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has positive effects as it references the provision of wheeling routes.	The policy could be enhanced by making explicit reference to how access for wheeling will be achieved, such as through dropped kerbs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	++	++	++	D	P	Local population, local communities	Accessible transport systems enhance mobility for all individuals, including those with disabilities, leading to increased independence and participation in social, economic, and recreational activities	When transport systems are designed to be accessible, they promote social inclusion by ensuring that all community members can participate fully in society	The policy has positive effects as it references the provision of wheeling routes.	The policy could be enhanced by making explicit reference to how access for wheeling will be achieved, such as through dropped kerbs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on walking, wheeling, and cycling.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on walking, wheeling, and cycling.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	++	D	T	Local population, local communities	Changes in travel patterns as people begin to take advantage of active travel as their main form of transport	Integrating sustainable transport options like public transit, cycling, and walking can reduce pollution and promote healthier communities	The policy has positive effects as it references walking, wheeling, and cycling which supports healthier lifestyles.	The policy could be enhanced by making explicit reference to the health benefits of active travel.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	+	+	++	I	T	Local population, local communities	Changes in travel patterns as people begin to take advantage of active travel as their main form of transport	Integrating sustainable transport options like public transit, cycling, and walking can reduce pollution and promote healthier communities	The policy has positive effects as it references walking, wheeling, and cycling which supports healthier lifestyles.	The policy could be enhanced by making explicit reference to the health benefits of active travel.

6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on walking, wheeling, and cycling.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	D	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access health and wellbeing facilities	The policy has positive effects as it references how specific active travel infrastructure will improve access to nature.	The policy could be enhanced by making explicit reference to the lesiure opportunities of active travel routes.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	+	D	P	Local population, local communities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access jobs, education, and services.	The policy has positive effects as it references safety for users.	The policy could be enhanced by making explicit reference to safety on all active travel routes, not just Public Rights of Way and the National Cycle Network, and how this will be achieved.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on walking, wheeling and cycling.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	I	P	Local population, local communities, educational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved active travel infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to educational facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	I	P	Local population, local communities, sports facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as improved active travel infrastructure will improve access to different land uses.	The policy could be enhanced by referencing access to community and social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on walking, wheeling and cycling.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on walking, wheeling and cycling.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of new active travel infrastructure and improving cross boundary linkages will promote efficient patterns of movement.	None identified.

9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as the provision of new active travel infrastructure can increase accessibility to public transport networks.	The policy could be enhanced by making explicit reference to integration of active travel infrastructure with the public transport network.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	++	++	++	D	P	Transport network, road network, road users, local population, local environment	Increased growth without provision would lead to cumulative issues	Coordinated efforts in land use planning and transport development can lead to more efficient and sustainable urban growth	The policy has positive effects as it promotes walking, wheeling, and cycling.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	++	D	P	Local population, local communities, air quality	Less motor vehicles and more use of increasingly connected sustainable modes of transport, will ultimately reduce greenhouse emissions long-term.	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has positive effects as increased use of active travel modes can work to improve air quality.	The policy could be enhanced by making reference to the air quality benefits from modal shift to sustainable and active modes of travel.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on walking, wheeling, and cycling.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on walking, wheeling, and cycling.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on walking, wheeling, and cycling.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on walking, wheeling, and cycling.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	++	I	P	Wildlife, landscapes and green and blue infrastructure	Substantial improvements in air quality, biodiversity, and overall urban health	Active travel routes integrated with green and blue infrastructure create more accessible and enjoyable pathways, encouraging more people to walk, wheel, and cycle and interact with nature	The policy has positive effects as it references protecting and enhancing Public Rights of Way and integrating roues with nature on The Medlock Way.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	++	D	P	Local population, local communities, green and blue infrastructure, leisure and recreational facilities	Substantial improvements in air quality, biodiversity, and overall urban health	Active travel routes integrated with green and blue infrastructure create more accessible and enjoyable pathways, encouraging more people to walk, wheel, and cycle and interact with nature	The policy has positive effects as it references protecting and enhancing Public Rights of Way and integrating roues with nature on The Medlock Way.	The policy could be enhanced by making explicit reference to the recreational and wellbeing opportunities of active travel routes.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on walking, wheeling, and cycling.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on walking, wheeling, and cycling.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on walking, wheeling, and cycling.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on walking, wheeling, and cycling.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on walking, wheeling, and cycling.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on walking, wheeling, and cycling.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on walking, wheeling, and cycling.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on walking, wheeling, and cycling.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on walking, wheeling, and cycling.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on walking, wheeling, and cycling.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on walking, wheeling, and cycling.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on walking, wheeling, and cycling.	None identified.

14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on walking, wheeling, and cycling.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on walking, wheeling, and cycling.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Energy infrastructure	Significantly reduce greenhouse gas emissions and air pollution, contributing to climate change mitigation	Improved health and wellbeing.	The policy has positive effects as active travel reduces reliance on cars, helping to reduce greenhouse gas emissions.	The policy could be enhanced by making explicit reference to the benefits of sustainable and active travel, such as reducing greenhouse gas emissions.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on walking, wheeling, and cycling.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	-	-	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Over time, investments in public realm improvements, such as better lighting, seating, and greenery, can make urban spaces more attractive and inviting	Integrating active travel routes with public realm enhancements creates a seamless network that makes it easier for people to move around the city	The policy has negative effects as it does not reference improving landscape quality or the public realm, which will encourage active travel.	The policy could be improved by referencing how the public realm will be improved to encourage and facilitate active travel.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on walking, wheeling, and cycling.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The development and maintenance of public rights of way improve accessibility, making it easier for people to navigate urban and rural areas	Linking public rights of way with other forms of green infrastructure and active travel routes creates a comprehensive network that enhances mobility and connectivity	The policy has positive effects as it references protecting and enhancing Public Rights of Way, which are a key aspect of the Peak District National Park.	The policy could be enhanced by making explicit reference to maintaining the character of the Peak District National Park when protecting and enhancing active travel routes and Public Rights of Ways
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on walking, wheeling, and cycling.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on walking, wheeling, and cycling.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on walking, wheeling, and cycling.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on walking, wheeling, and cycling.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on walking, wheeling, and cycling.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on walking, wheeling, and cycling.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on walking, wheeling, and cycling.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on walking, wheeling, and cycling.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on walking, wheeling, and cycling.	None identified.

Policy Name	HSP T7: Freight Movement and Deliveries											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on freight movement and deliveries.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on freight movement and deliveries.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on freight movement and deliveries.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on freight movement and deliveries.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on freight movement and deliveries.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on freight movement and deliveries.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	+	+	++	D	P	Local economy, local population	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as it will support new local frieght and logistics facilities.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on freight movement and deliveries.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	+	D	P	Local economy, local population, transport infrastructure	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as it references using the strategic highway network for freight movement.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on freight movement and deliveries.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on freight movement and deliveries.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	+	D	P	Transport network, road network, road users, local population	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as it references using the strategic highway network for freight movement.	The policy could be enhanced by referencing other modes that support freight movements, including through low- or zero-carbon delivery mechanisms.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	+	D	P	Transport network, road network, road users, local population	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as it references using the strategic highway network for freight movement.	The policy could be enhanced by referencing other modes that support freight movements, including through low- or zero-carbon delivery mechanisms.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on freight movement and deliveries.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-/?	-/?	-/?	D	P	Transport network, road network, road users, local population	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has negative/uncertain effects as freight traffic is not sustainable, however, is required for the efficient movement of goods and services.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms, and explicity referencing further measures to ensure all road users are accomodated safely, such as driver layover facilities.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	-	-	D	P	Transport network, road network, road users, local population, local environment	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has negative effects as freight traffic is not sustainable and can have negaitve impacts on air quality and therefore on the environment and public health.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms, and explicity referencing further measures to ensure all road users are accomodated safely, such as driver layover facilities.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	+	I	P	Transport network, road network, road users, local population, local environment	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as preventing freight traffic from using residential streets will encourage walking, wheeling and cycling.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	+	+	I	P	Local population, lower socio-economic groups and deprived areas	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as it accommodates the expansion of freight activities, so it will indirectly reduce the proportion of people living in deprivation through employment opportunities.	None identified.

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on freight movement and deliveries.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on freight movement and deliveries.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on freight movement and deliveries.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on freight movement and deliveries.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on freight movement and deliveries.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on freight movement and deliveries.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	I	T	Local population, local communities	Less vehicle use and more use of active and sustainable modes of transport will support improvements in determinants of health	Reduced health issues caused by poor air quality, reducing pressures on health services.	The policy has positive effects as the segragation of HGVs onto dedicated infrastructure has documented positive impacts on health and safety.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on freight movement and deliveries.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on freight movement and deliveries.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on freight movement and deliveries.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on freight movement and deliveries.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on freight movement and deliveries.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	O	O	O	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on freight movement and deliveries.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	O	O	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on freight movement and deliveries.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on freight movement and deliveries.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on freight movement and deliveries.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has positive effects as it references traffic management, preventing the use of unsuitable roads and using the strategic highway network for freight movement, which will improve efficiency	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	O	O	O	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference sustainable transport, however the policy is focused on freight movement and deliveries.	None identified.

9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-/?	-/?	-/?	D	P	Transport network, road network, road users, local population, local environment	Over time, the continuous movement of freight can lead to the degradation of transportation infrastructure, necessitating regular maintenance and upgrades.	Efficient freight networks can stimulate regional development by improving access to markets and resources, fostering economic opportunities.	The policy has negative/uncertain effects as freight traffic is not sustainable, however, is required for the efficient movement of goods and services.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms, and explicity referencing further measures to ensure all road users are accomodated safely, such as
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	-	-	-	D	P	Local population, local communities, air quality	Increased trips by motor vehicles will worsen the air quality over time if sustainable modes are not utilised	The continuous movement of freight vehicles, especially those powered by diesel, contributes to the accumulation of pollutants, leading to poor air quality and therefore poor health and wellbeing.	The policy has negative effects as unsustainable freight movement will have negaitve impacts on air quality.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on freight movement and deliveries.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on freight movement and deliveries.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on freight movement and deliveries.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on freight movement and deliveries.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on freight movement and deliveries.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on freight movement and deliveries.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on freight movement and deliveries.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on freight movement and deliveries.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on freight movement and deliveries.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on freight movement and deliveries.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on freight movement and deliveries.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on freight movement and deliveries.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on freight movement and deliveries.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on freight movement and deliveries.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on freight movement and deliveries.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on freight movement and deliveries.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on freight movement and deliveries.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on freight movement and deliveries.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on freight movement and deliveries.	None identified.

14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on freight movement and deliveries.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on freight movement and deliveries.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on freight movement and deliveries.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on freight movement and deliveries.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	D	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on freight movement and deliveries.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	D	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on freight movement and deliveries.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	+	I	P	Energy infrastructure	Increased trips by motor vehicles will worsen the air quality over time if sustainable modes are not utilised	The adoption of advanced technologies can synergistically improve the sustainability and efficiency of freight movement	The policy has positive effects as the segragation of HGVs onto dedicated infrastructure is a critical part of Vision Zero and addressing NOX pollution.	The policy could be enhanced by promoting the sustainable movement of freight, including low- or zero- carbon delivery mechanisms.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy schemes, however the policy is focused on freight movement and deliveries.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on freight movement and deliveries.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on freight movement and deliveries.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on freight movement and deliveries.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on freight movement and deliveries.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on freight movement and deliveries.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on freight movement and deliveries.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on freight movement and deliveries.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on freight movement and deliveries.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on freight movement and deliveries.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on freight movement and deliveries.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on freight movement and deliveries.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on freight movement and deliveries.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on freight movement and deliveries.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on freight movement and deliveries.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on freight movement and deliveries.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on freight movement and deliveries.	None identified.

Policy Name	HSP T8: Parking											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on parking.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on parking.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on parking.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on parking.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on parking.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on parking.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on parking.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on parking.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	O	O	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on parking.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on parking.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on parking.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	+	D	P	Transport network, road network, road users, local population	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as the provision of parking and promotion of sustainable and active travel modes will ensure the network can support development.	The policy could be enhanced by making explicit reference to how parking standards will support and enable development.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	O	O	O	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as it does not reference connectivity, however the policy is focused on parking.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on parking.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	+	I	P	Transport network, road network, road users, local population	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as it supports the Right Mix 2040 ambition of 50% of all trips being made by public or active travel.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	I	P	Transport network, road network, road users, local population, local environment	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as it supports the Right Mix 2040 ambition of 50% of all trips being made by public or active travel, which will help to improve air quality and therefore improve the environment and public health, as well as the delivery of safe on and off-street parking.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	+	I	P	Transport network, road network, road users, local population, local environment	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as it supports the Right Mix 2040 ambition of 50% of all trips being made by public or active travel. This will encourage the creation of new active travel routes.	The policy could be enhanced by making explicit reference to cycle parking.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on parking.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on parking.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on parking.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	-	-	-	D	P	Local population, local communities	Ensuring equal access to parking for all community members, including disabled people, can cumulatively improve overall accessibility and mobility	By ensuring fair access to parking, cities can support local businesses and economic development, creating a more vibrant urban environment	The policy has negative effects as it does not reference accessible parking for disabled people and those with children.	The policy could be enhanced by making explicit reference to how parking standards will support disabled people and those with children.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	-	-	-	D	T	Local population, local communities	Ensuring equal access to parking for all community members, including disabled people, can cumulatively improve overall accessibility and mobility	By ensuring fair access to parking, cities can support local businesses and economic development, creating a more vibrant urban environment	The policy has negative effects as it does not reference accessible parking for disabled people and those with children.	The policy could be enhanced by making explicit reference to how parking standards will support disabled people and those with children.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on parking.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	-	-	-	I	T	Local population, local communities	Ensuring equal access to parking for all community members, including disabled people, can cumulatively improve overall accessibility and mobility	By ensuring fair access to parking, cities can support local businesses and economic development, creating a more vibrant urban environment	The policy has negative effects as it does not reference accessible parking for disabled people and those with children. Lack of this could make people feel unwelcome and underserved.	The policy could be enhanced by making explicit reference to how parking standards will support disabled people and those with children.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	I	T	Local population, local communities	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as it supports the Right Mix 2040 ambition of 50% of all trips being made by public or active travel, which supports healthier, active lifestyles.	The policy could be enhanced by making explicit reference to cycle parking and the health benefits of active travel.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on parking.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on parking.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on parking.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	+	D	P	Local population, local communities	Consistent implementation of safety measures in car parks can cumulatively enhance overall public safety, making people feel more secure when parking their vehicles	By integrating safe car parks with public transport hubs, cities can promote the use of public transport, reducing traffic congestion and environmental impact	The policy has positive effects as it references the provision of safe parking facilities.	The policy could be ehanced by referencing how safe parking facilities will be achieved.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on parking.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	D	P	Local population, local communities, educational facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as it references the Parking for All standards. Accessible and safe parking will ensure better access to social infrastructure.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	D	P	Local population, local communities, sports facilities	Could have cumulative socio-economic and environmental effects with other local development schemes.	Improved mobility, making it easier for people to access social infrastructure.	The policy has positive effects as it references the Parking for All standards. Accessible and safe parking will ensure better access to social infrastructure.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on parking.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on parking.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as parking standards and reducing parking spaces can encourage people to live closer to essential services, limiting the need to travel.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as parking standards and reducing parking spaces can encourage people to use public and active modes, reducing reliance on private cars.	The policy could be ehanced by referencing how safe parking facilities will be achieved, and possible integration with the public transport network, such as through Park and Ride.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as parking standards and reducing parking spaces can encourage people to use public and active modes, reducing reliance on private cars.	The policy could be enhanced by making explicit reference to cycle parking.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	D	P	Local population, local communities, air quality	Over time, the cumulative effect of vehicle emissions can degrade air quality significantly.	Implementing efficient parking systems can reduce the time vehicles spend circling for spaces, thereby decreasing emissions and improving air quality	The policy has positive effects as parking standards and reducing parking spaces can encourage people to use public and active modes, improving air quality.	The policy could be enhanced by explicity referencing different types of parking for cleaner modes, such as EV and cycle, and air quality benefits from modal shift to sustainable and active modes of travel.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on parking.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on parking.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on parking.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on parking.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on parking.	The policy could be enhanced by proposing the integration of green infrastructure into car parking, such as green roofs, to help promote healthier air quality.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on parking.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on parking.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on parking.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	-	-	-	I	P	Built environment, natural environment	Inadequate guidance for EV provision in parking standards can lead to a reduced uptake of EVs.	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has negative effects as it does not reference guidance for EV parking or charging provision, which is a low/zero-carbon technology.	The policy could be enhanced by explicity referencing different types of parking for modes using low-carbon and renewable energy technology, such as EVs.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on parking.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on parking.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Reduce flood risk.	Reduce damage to property and therefore reduce risk of economic losses.	The policy has negative effects as it does not reference protecting new transport infrastructure from flooding.	The policy could be enhanced by ensuring new transport infrastructure is protected from flooding.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on parking.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on parking.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on parking.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on parking.	The policy could be enhanced by proposing the integration of sustainable drainage systems within parking layouts.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on parking.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on parking.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on parking.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on parking.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on parking.	None identified.

14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on parking.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on parking.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on parking.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on parking.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	+	D	P	Energy infrastructure	Over time, inadequate parking standards can lead to increased traffic congestion as drivers search for parking spaces	Restrictive parking standards can synergistically promote the use of public transport, cycling, and walking	The policy has positive effects as parking standards and reducing parking spaces can encourage people to use public and active modes, which will improve air quality.	The policy could be enhanced by explicity referencing different types of parking for cleaner modes, such as EV and cycle.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however the policy is focused on parking.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on parking.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on parking.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on parking.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on parking.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on parking.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on parking.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on parking.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on parking.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on parking.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on parking.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on parking.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on parking.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on parking.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on parking.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on parking.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on parking.	None identified.

Policy Name	HSP T9: EV Charging Infrastructure

Ref	Objective	Assessement Criteria	ST (0-4 years)	MT (5-9 years)	LT (10+ years)	Direct or Indirect	Temporary or Permenant	Receptors and/or Affected Groups	Potential Cumulative Effects	Potential Synergistic Effects	Explaination Against Objective	Mitigation/Enhancement
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on EV charging infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on EV charging infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on EV charging infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on EV charging infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on EV charging infrastructure.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	O	O	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however the policy is focused on EV charging infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on EV charging infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	O	O	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on EV charging infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	O	O	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on EV charging infrastructure.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	O	O	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on EV charging infrastructure.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	O	O	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as it does not reference employment land, however the policy is focused on EV charging infrastructure.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as the provision of EV charging infrastructure will support development.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	++	D	P	Transport network, road network, road users, local population	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as the provision of EV charging infrastructure in convenient and accessible locations will improve connectivity.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	O	O	O	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities and digital infrastructure, however the policy is focused on EV charging infrastructure.	The policy could be enhanced by referencing the need for greater grid capacity to support EV charging infrastructure.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+/?	+/?	++/?	D	P	Transport network, road network, road users, local population	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive/uncertain effects as the provision of EV charging infrastructure will not reduce the reliance on the private vehicle, however, is required to transtion to a more environmentally sustainable network.	The policy could be enhanced by proposing that EV charging infrastructure is also co-located with or installed alongisde active travel and public transport facilities, such as at Mobility Hubs.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+/?	+/?	++/?	D	P	Transport network, road network, road users, local population, local environment	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive/uncertain effects as the policy references safe locating and cross-pavement solutions, and provision of EV charging infrastructure will support more environmentally sustainable travel, minimising air pollution, however, will not reduce non-tailpipe emissions or the reliance on the private vehicle.	The policy could be enhanced by proposing that EV charging infrastructure is also co-located with or installed alongisde active travel and public transport facilities, such as at Mobility Hubs.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	O	O	O	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference walking and cycling, however the policy is focused on EV charging infrastructure.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on EV charging infrastructure.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	O	O	O	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however the policy is focused on EV charging infrastructure.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on EV charging infrastructure.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	+	D	P	Local population, local communities	Consistent efforts to distribute EV charging infrastructure equitably can help reduce disparities in access to clean transportation options, benefiting low-income and marginalized communities	Synergistic effects include fostering community engagement and trust, as equitable EV charging infrastructure demonstrates a commitment to inclusivity and sustainability	The policy has positive effects as it references providing publicly accessible infrastructure in accessible locations.	The policy could be enhanced by ensuring the provision of EV charging infrastructure in low income and marginalised communities, as well as the provision of EV charging infrastructure in disabled and parent and child spaces.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	+	+	+	D	T	Local population, local communities	Consistent efforts to distribute EV charging infrastructure equitably can help reduce disparities in access to clean transportation options, benefiting low-income and marginalized communities	Synergistic effects include fostering community engagement and trust, as equitable EV charging infrastructure demonstrates a commitment to inclusivity and sustainability	The policy has positive effects as it references providing publicly accessible infrastructure in accessible locations.	The policy could be enhanced by ensuring the provision of EV charging infrastructure in low income and marginalised communities, as well as the provision of EV charging infrastructure in disabled and parent and child spaces.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	O	O	O	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however the policy is focused on EV charging infrastructure.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	D	T	Local population, local communities	Consistent efforts to distribute EV charging infrastructure equitably can help reduce disparities in access to clean transportation options, benefiting low-income and marginalized communities	Synergistic effects include fostering community engagement and trust, as equitable EV charging infrastructure demonstrates a commitment to inclusivity and sustainability	The policy has positive effects as it references providing publicly accessible infrastructure in accessible locations.	The policy could be enhanced by ensuring the provision of EV charging infrastructure in low income and marginalised communities, as well as the provision of EV charging infrastructure in disabled and parent and child spaces.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+/?	+/?	+/?	D	T	Transport network, road network, road users, local population, local environment	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive/uncertain effects as the provision of EV charging infrastructure will support more environmentally sustainable travel, minimising air pollution which is a determinant of health, however, will not reduce non-exhaust emissions or the reliance on the private vehicle.	The policy could be enhanced by proposing that EV charging infrastructure is also co-located with or installed alongside active travel and public transport facilities, such as at Mobility Hubs.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on EV charging infrastructure.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on EV charging infrastructure.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	O	O	O	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as it does not reference health and wellbeing, however the policy is focused on EV charging infrastructure.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	++	D	P	Local population, local communities	Over time, the presence of EV charging stations in safe locations can encourage more people to adopt electric vehicles, contributing to a reduction in greenhouse gas emissions and air pollution	Safe EV charging infrastructure can synergistically enhance urban livability by creating secure and accessible environments that encourage sustainable mobility	The policy has positive effects as it references providing infrastructure in safe locations. and cross-pavement solutions.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	O	O	O	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on EV charging infrastructure.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	O	O	O	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on EV charging infrastructure.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	O	O	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however the policy is focused on EV charging infrastructure.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on EV charging infrastructure.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	O	O	O	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however the policy is focused on EV charging infrastructure.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	O	O	O	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reduce the need to travel, however the policy is focused on EV charging infrastructure.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	O	O	O	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference public transport, however the policy is focused on EV charging infrastructure.	The policy could be enhanced by proposing that EV charging infrastructure is also co-located with or installed alongisde active travel and public transport facilities, such as at Mobility Hubs.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+/?	+/?	++/?	D	P	Transport network, road network, road users, local population	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive/uncertain effects as the provision of EV charging infrastructure will not reduce the reliance on the private vehicle, however, is required to transtion to a more environmentally sustainable network.	The policy could be enhanced by proposing that EV charging infrastructure is also co-located with or installed alongisde active travel and public transport facilities, such as at Mobility Hubs.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	D	P	Local population, local communities, air quality	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as it promotes the use of electric vehicles, which will improve air quality overall.	The policy could be enhanced by referencing the air quality benefits of EVs, in addition to referencing their limitation in reducing non-exhaust emissions.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on EV charging infrastructure.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	O	O	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however the policy is focused on EV charging infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure and geodiversity, however the policy is focused on EV charging infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure and geodiversity, however the policy is focused on EV charging infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure and geodiversity, however the policy is focused on EV charging infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure and geodiversity, however the policy is focused on EV charging infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	O	O	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure and geodiversity, however the policy is focused on EV charging infrastructure.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on EV charging infrastructure.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	+	+	++	D	P	Built environment, natural environment	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as it promotes the use of EVs, which use low or zero carbon technology.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on EV charging infrastructure.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	O	O	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however the policy is focused on EV charging infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on EV charging infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on EV charging infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on EV charging infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on EV charging infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	O	O	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on EV charging infrastructure.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	O	O	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flooding, however the policy is focused on EV charging infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on EV charging infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on EV charging infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on EV charging infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on EV charging infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	O	O	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on EV charging infrastructure.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	O	O	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however the policy is focused on EV charging infrastructure.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	+	+	++	D	P	Energy infrastructure	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as it promotes the use of electric vehicles and EV charging infrastructure, which will reduce energy demand.	The policy could be enhanced by referencing how EV charging will be supported in new developments, such as through home charging or parking standards.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	O	O	O	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy generation, however the policy is focused on EV charging infrastructure.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Energy infrastructure	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as it promotes the use of electric vehicles which will reduce greenhouse gas emissions.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	+	+	++	D	P	Energy infrastructure	The cumulative reduction in greenhouse gas emissions from widespread EV adoption can significantly improve air quality and mitigate climate change	The development of EV charging infrastructure can synergistically stimulate economic growth by creating jobs, attracting investments, and fostering innovation in green technologies	The policy has positive effects as it promotes the use of electric vehicles and EV charging infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on EV charging infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on EV charging infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on EV charging infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on EV charging infrastructure.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	O	O	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as it does not reference heritage, however the policy is focused on EV charging infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on EV charging infrastructure.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on EV charging infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on EV charging infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on EV charging infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	O	O	O	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on EV charging infrastructure.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	O	O	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however the policy is focused on EV charging infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on EV charging infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on EV charging infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on EV charging infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on EV charging infrastructure.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	O	O	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however the policy is focused on EV charging infrastructure.	None identified.

Policy Name	HSP PL1: Archaeology and Scheduled Monuments											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and conserving heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and conserving heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and conserving heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and conserving heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing stock, however the policy is focused on protecting and conserving heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on protecting and conserving heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting and conserving heritage assets.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and conserving heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting and conserving heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on protecting and conserving heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on protecting and conserving heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on protecting and conserving heritage assets.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on protecting and conserving heritage assets.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on protecting and conserving heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to relations between people, however the policy is focused on protecting and conserving heritage assets.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on protecting and conserving heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on protecting and conserving heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to needs of different areas, however the policy is focused on protecting and conserving heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, local communities	Protecting heritage assets can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with transport network can promote access to heritage assets, enouraging educational, recreational and tourism use of historic destinations.	The policy has positive effects as there is reference to protecting and conserving heritage assets of archaeological interest, which can help to crease a sense of belonging.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting and conserving heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting and conserving heritage assets.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to active environments, open spaces, green and blue infrastructure, however the policy is focused on protecting and conserving heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	D	P	Local population, local communities, educational facilities	Protecting heritage assets can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with transport network can promote access to heritage assets, enouraging educational, recreational and tourism use of historic destinations.	The policy has positive effects as there is reference to the potential recereational benefits of archeological remains.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on protecting and conserving heritage assets.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to healthcare facilities, however the policy is focused on protecting and conserving heritage assets.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	D	P	Local population, local communities, educational facilities	Protecting heritage assets can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with transport network can promote access to heritage assets, enouraging educational, recreational and tourism use of historic destinations.	The policy has positive effects as there is reference to the potential educational benefits of archeological remains.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastrucutre, however the policy is focused on protecting and conserving heritage assets.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and conserving heritage assets.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and conserving heritage assets.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to travel movement, however the policy is focused on protecting and conserving heritage assets.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and conserving heritage assets.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and conserving heritage assets.	None identified.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and conserving heritage assets.	None identified.

10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and conserving heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on protecting and conserving heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on protecting and conserving heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on protecting and conserving heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on protecting and conserving heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to ecological network, however the policy is focused on protecting and conserving heritage assets.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on protecting and conserving heritage assets.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on protecting and conserving heritage assets.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on protecting and conserving heritage assets.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on protecting and conserving heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting and conserving heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting and conserving heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting and conserving heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting and conserving heritage assets.	None identified.

13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting and conserving heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptation, however the policy is focused on protecting and conserving heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on protecting and conserving heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on protecting and conserving heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on protecting and conserving heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water management, however the policy is focused on protecting and conserving heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to risk of pollution, however the policy is focused on protecting and conserving heritage assets.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water efficiency, however the policy is focused on protecting and conserving heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on protecting and conserving heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on protecting and conserving heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas, however the policy is focused on protecting and conserving heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on protecting and conserving heritage assets.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting heritage assets can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with transport network can promote access to heritage assets, enouraging educational, recreational and tourism use of historic destinations.	The policy has positive effects as there is reference to encouraging facilitation of the conservation, accessibility, and interpretation of achaeological remains within public realms.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	++	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting heritage assets can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with transport network can promote access to heritage assets, enouraging educational, recreational and tourism use of historic destinations.	The policy has positive effects as there is reference to protecting and conserving heritage assets of archaeological interest.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	o	o	o	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as there is no reference to local character, however the policy is focused on protecting and conserving heritage assets.	
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	o	o	o	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as there is no reference to high quality design, however the policy is focused on protecting and conserving heritage assets.	
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	++	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting heritage assets can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with transport network can promote access to heritage assets, enouraging educational, recreational and tourism use of historic destinations.	The policy has positive effects as there is reference to protecting and conserving heritage assets (both designated and non-designated) of archaeological interest.	
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting and conserving heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on protecting and conserving heritage assets.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on protecting and conserving heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting and conserving heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting and conserving heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on protecting and conserving heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on protecting and conserving heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on protecting and conserving heritage assets.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and conserving heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and conserving heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and conserving heritage assets.	None identified.

Policy Name	HSP PL2: Listed Buildings - Alternative Uses, Additions, Demolition and Development within their Setting											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing stock, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	+	+	I	P	Local economy, local population	Heritage preservation supports the tourism industry, which fuels demand for jobs in various fields, including hospitality, guiding services, event planning, and transportation	Adaptive reuse of heritage buildings can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it supports the reuse/alternative uses of listed buildings.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to relations between people, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to needs of different areas, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, local communities	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing listed buildings and their settings, which can help to create a sense of belonging.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to active environments, open spaces, green and blue infrastructure, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, public open space, leisure and recreational facilities, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to healthcare facilities, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to travel movements, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	+	+	++	D	P	Wildlife, landscapes and green and blue infrastructure	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as it references considerations for protected species where they are using a heritage asset.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to ecological networks, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	-	-	I	P	Built environment, natural environment	N/A	N/A	The policy has negative effects as there is no reference to climate change or adaptation measures to environmental damage that could be required to protect listed building property and their settings.	The policy could be enhanced by referencing considerations for how development could affect a listed building's resilience to environmental risk, such as new development that increases flood risk.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Built environment, natural environment	N/A	N/A	The policy has negative effects as there is no reference to climate change or adaptation measures to environmental damage that could be required to protect listed building property and their settings.	The policy could be enhanced by referencing considerations for how development could affect a listed building's resilience to environmental risk, such as new development that increases flood risk.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water managements, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to risk of pollution, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas emissions, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing listed buildings and their settings, and its relation to the adjacent public realm.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing listed buildings and their settings.	The policy could be enhanced by referencing specific guidance or standards that may support the protection, conservation and enhancement of listed buildings.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing listed buildings and their settings, which respects and maintains local character and distinctiveness.	The policy could be enhanced by referencing specific guidance or standards that may support the protection, conservation and enhancement of listed buildings.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to encouraging high quality design solutions in relation to listed buildings.	The policy could be enhanced by referencing specific guidance or standards that may support the protection, conservation and enhancement of listed buildings.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing listed buildings and their settings.	The policy could be enhanced by referencing specific guidance or standards that may support the protection, conservation and enhancement of listed buildings.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+	+	+	I	P	Brownfield land, local population	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as appropriate safeguards and allowances for development that affects listed buildings can encourage a sustainable and efficent alternative use of land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	++	D	P	Brownfield land, local population	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as appropriate safeguards and allowances for development that affects listed buildings can encourage the redevelopment and appropriate use of derelict properties and buildings.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	+	+	++	D	P	Brownfield land, local population	Protecting listed buildings and their setting can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as appropriate safeguards and allowances for development that affects listed buildings can encourage re-use and a sustainable use of physical resources, such as building materials.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and enhancing listed buildings and their setting.	None identified.

Policy Name	HSP PL3: Conservation Areas - Managing											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing conservation areas.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing conservation areas.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing conservation areas.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on protecting and enhancing conservation areas.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing stock, however the policy is focused on protecting and enhancing conservation areas.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on protecting and enhancing conservation areas.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting and enhancing conservation areas.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and enhancing conservation areas.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on protecting and enhancing conservation areas.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on protecting and enhancing conservation areas.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	++	D	T	Local population, local communities	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects conservation areas can include town centres, such as Stalybridge Town Centre	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on protecting and enhancing conservation areas.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on protecting and enhancing conservation areas.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on protecting and enhancing conservation areas.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to relations between people, however the policy is focused on protecting and enhancing conservation areas.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on protecting and enhancing conservation areas.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on protecting and enhancing conservation areas.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	I	P	Local population, local communities	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as the conservation areas can ecompass rural hamlets villages, through to urban neighbourhoods, town centres and industrial areas. however the policy is focused on protecting and enhancing conservation areas.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, local communities	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing conservation areas, which can help to create a sense of belonging.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting and enhancing conservation areas.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on protecting and enhancing conservation areas.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to active environments, open spaces, green and blue infrastructure, however the policy is focused on protecting and enhancing conservation areas.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, public open space, leisure and recreational facilities, however the policy is focused on protecting and enhancing conservation areas.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on protecting and enhancing conservation areas.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to healthcare facilities, however the policy is focused on protecting and enhancing conservation areas.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on protecting and enhancing conservation areas.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on protecting and enhancing conservation areas.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and enhancing conservation areas.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on protecting and enhancing conservation areas.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to travel movements, however the policy is focused on protecting and enhancing conservation areas.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on protecting and enhancing conservation areas.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and enhancing conservation areas.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and enhancing conservation areas.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on protecting and enhancing conservation areas.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Conservation areas safeguard natural features which can contribute to biodiversity and climate resilience.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as conservation areas can include designated wildlife and unique geological features, such as at Carrbrook.	The policy could be enhanced by referencing the benefits of conservation areas, other than local character.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Conservation areas safeguard natural features which can contribute to biodiversity and climate resilience.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as conservation areas can include designated wildlife and unique geological features, such as at Carrbrook.	The policy could be enhanced by referencing the benefits of conservation areas, other than local character.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Conservation areas safeguard natural features which can contribute to biodiversity and climate resilience.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as conservation areas can function as multifunctional green and blue infrastructure, such as new designated canal networks.	The policy could be enhanced by referencing the benefits of conservation areas, other than local character.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on protecting and enhancing conservation areas.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Conservation areas safeguard natural features which can contribute to biodiversity and climate resilience.	Conservation areas support sustainability by encouraging the reuse and adaptation of existing buildings, reducing the need for new construction and reducing emissions.	The policy has positive effects as enhancing conservation areas can conttibute to greater climate resilience by safeguarding natural features.	The policy could be enhanced by referencing the benefits of conservation areas, other than local character.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	+	+	+	I	P	Built environment, natural environment	Conservation areas safeguard natural features which can contribute to biodiversity and climate resilience.	Conservation areas support sustainability by encouraging the reuse and adaptation of existing buildings, reducing the need for new construction and reducing emissions.	The policy has positive effects as enhancing conservation areas can conttibute to greater climate resilience by safeguarding natural features.	The policy could be enhanced by referencing the benefits of conservation areas, other than local character.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on protecting and enhancing conservation areas.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on protecting and enhancing conservation areas.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on protecting and enhancing conservation areas.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing conservation areas.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing conservation areas.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing conservation areas.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing conservation areas.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing conservation areas.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on protecting and enhancing conservation areas.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on protecting and enhancing conservation areas.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on protecting and enhancing conservation areas.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on protecting and enhancing conservation areas.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water managements, however the policy is focused on protecting and enhancing conservation areas.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to risk of pollution, however the policy is focused on protecting and enhancing conservation areas.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on protecting and enhancing conservation areas.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy efficiency, however the policy is focused on protecting and enhancing conservation areas.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on protecting and enhancing conservation areas.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas emissions, however the policy is focused on protecting and enhancing conservation areas.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on protecting and enhancing conservation areas.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	++	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as the policy is focused on protecting and enhancing conservation areas, which can enhance area character and the public realm.	The policy could be enhanced by also referencing national planning policy and partnership working.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing conservation areas.	The policy could be enhanced by also referencing national planning policy and partnership working.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing conservation areas, which respects and maintains local character and distinctiveness.	The policy could be enhanced by also referencing national planning policy and partnership working.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to encouraging proposals to use design and materials that accord with the character and appearance of adjacent buildings and features of interested and the wider area.	The policy could be enhanced by also referencing national planning policy and partnership working.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Protecting and enhancing conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developemnts can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing conservation areas.	The policy could be enhanced by also referencing national planning policy and partnership working.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+	+	+	I	P	Brownfield land, local population	Protecting conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as appropriate safeguards and allowances for development that affects conservations areas can encourage a sustainable and efficent alternative use of land, such as through reuse in accordance with Listed Buildings policy.	The policy could be enhanced by also referencing national planning policy and partnership working.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on protecting and enhancing conservation areas.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on protecting and enhancing conservation areas.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	+	I	P	Brownfield land, local population	Protecting conservation areas can maintain the cultural identify and history of communities, fostering a sense of pride and belonging among residents.	Integrating with other types of developments can create more cohesion in architectural style and further enhance local character and distinctiveness.	The policy has positive effects as appropriate safeguards and allowances for development that affects conservations areas can encourage a sustainable and efficent alternative use of land, such as through reuse in accordance with Listed Buildings policy.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on protecting and enhancing conservation areas.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on protecting and enhancing conservation areas.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on protecting and enhancing conservation areas.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on protecting and enhancing conservation areas.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and enhancing conservation areas.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and enhancing conservation areas.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on protecting and enhancing conservation areas.	None identified.

Policy Name	HSP PL4: Historic Parks and Gardens- Managing											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing stock, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to utilities / digital infrastructure, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to relations between people, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to needs of different areas, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	++	D	P	Local population, local communities	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing the overall significance of registered parks and gardens, which can help to create a sense of place for present and future communities.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to active environments, open spaces, green and blue infrastructure, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+/?	+/?	+/?	D	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive / uncertain effects as there is reference to protecting, conserving, and enhancing the overall significance of registered parks and gardens, which can act as green infrastructure and provide public open space, leisure and recreational functions, in turn promoting access, however there is no explicit reference to promoting access through other means.	The policy could be enhanced by referencing how access to Historic Parks and Gardens will be promoted, beyond development management and protection.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to healthcare facilities, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	D	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing the overall significance of registered parks and gardens, which can contain playing fields and sports facilities, and references Policy HSP PE5..	The policy could be enhanced by referencing how access to Historic Parks and Gardens will be promoted, beyond development management and protection.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to travel movements, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as there is reference to protecting, conserving, and enhancing the overall significance of registered parks and gardens, which can act as multifunctional green and blue infrastructure.	The policy could be enhanced by making more explicit reference to how Historic Parks and Gardens will be enhanced.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+/?	+/?	+/?	D	T	Wildlife, landscapes and green and blue infrastructure	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive / uncertain effects as there is reference to protecting, conserving, and enhancing the overall significance of registered parks and gardens, which can act as green infrastructure and provide public open space, leisure and recreational functions, in turn promoting access, however there is no explicit reference to ensuring access through other means.	The policy could be enhanced by referencing how access to Historic Parks and Gardens will be promoted, beyond development management and protection.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to ecological networks, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water managements, however the policy is focused on protecting and enhancing conservation areas.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to risk of pollution, however the policy is focused on protecting and enhancing conservation areas.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to greenhouse gas emissions, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as the policy is focused on protecting Historic Parks and Gardens, which can improve landscape quality, the character of open spaces and the public realm.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as the policy is focused on protecting Historic Parks and Gardens, which conserves and enhances the historic environment, heritage assets and their setting.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as the policy is focused on protecting Historic Parks and Gardens, which respects, maintains and stengthens local character and distinctiveness.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	-	-	-	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has negative effects as there is no reference to high quality design as in keeping with local context as a criteria for new proposals affecting Historic Parks and Gardens.	The policy could reference high quality design standards in relation to requirements for new developments in or within or affecting the setting of a Registered Historic Park and Garden.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Developments proven to be exceptional circumstances may build up around Historic Parks and Gardens and result in an overall adverse impact on their significance in the long term.	Integrating new developments with Historic Parks and Gardens in terms of design and styles can create more cohesion and further enhance local character and distinctiveness.	The policy has positive effects as the policy is focused on protecting Historic Parks and Gardens, which can protect or enhance the significance of designated and non-designated heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on managing new developments within or affecting the setting of Historic Parks and Gardens.	None identified.

Policy Name	HSP PL5: Designated Heritage Assets-											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing need, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing need, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing need, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	+	+	+	D	P	Built environment, housing market, local population	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to improving the energy efficiency of designated heritage assets, which could include housing stock which are listed buildings.	The policy could make more explicit reference to housing stock in relation to promoting the energy efficiency of designated heritage assets.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	D	T	Local economy, local population, town centres	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as measures to improve energy efficiency of heritage assets can include listed buildings in town centres, augmenting their viability.	The policy could be enhanced by referencing examples of designated heritage assets and assoicated benefits of improved energy efficiency.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to relations between people, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to needs of different areas, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to community cohesion, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to active environments, open spaces, green and blue infrastructure, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, public open space, leisure and recreational facilities, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to community safety, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to healthcare facilities, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to travel movements, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	I	P	Local population, local communities, air quality	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to lowering carbon emissions of designated heritage assets, which could contribute to improving air quality.	The policy could make reference to the benefits of lowering carbon emssions, such as climate change mitigation and improved air quality.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	+	++	D	P	Local population, local communities, air quality	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as it is focused on lowering carbon emissions of designated heritage assets.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to areas with poor air quality, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to giving consideration to mitigation of impacts on protected species.	The policy could make more explicit reference to designated wildlife sites and habitats in relation to mitigating impacts on protected species.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to green and blue infrastructure, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Improving he energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to consider mitigation of impacts on protected species.	The policy could make more explicit reference to supporting local wider ecological networks in relation to mitigating impacts on protected species.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	+	+	++	D	P	Built environment, natural environment	Improving he energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to mitigating climate change through improving carbon efficiency of heritage assets.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	+	+	++	I	P	Built environment, natural environment	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to supporting measures that lower carbon emmissions and integrate renewable energy sources with designated heritage assets, which supports the delivery of renewable and low carbon energy technology.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to nature-based solutions, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk adaptations, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water features, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water managements, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to risk of water pollution, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water recycling, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	+	+	++	D	P	Energy infrastructure	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as new development can include upgrades and re-use of designated heritage assets, and the policy is focused on energy efficiency.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	+	+	++	D	P	Energy infrastructure	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as it references integrating renewable energy sources withn designated heritage assets.	The policy could be enhanced by referencing types of renewable energy sources or conditions required for integration.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	I	P	Energy infrastructure	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to supporting measures that lower carbon emmissions and integrate renewable energy sources with designated heritage assets, which promotes reduction in greenhouse gas emissions.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	+	+	++	I	P	Energy infrastructure	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to supporting measures that lower carbon emmissions and integrate renewable energy sources with designated heritage assets.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	o	o	o	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as there is no reference to landscape, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to minimising harm to the significance of heritage assets and their setting, in terms of scale, siting and appearance.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	+	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to minimising harm to the significance of heritage assets and their setting, in terms of scale, siting and appearance, which respects and maintains local character and distinctiveness.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to minimising harm to the significance of heritage assets and their setting, in terms of scale, siting and appearance, which promotes high quality design in contexts with the surroundings	The policy could make more explicit reference to high quality design standards in relation to the scale, siting and appearance requirements for measures to improve energy efficiency of designated heritage assets.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Improving the energy efficiency of heritage buildings ensures that they remain functional and promotes sustainable reuse of buildings.	Integrating with sustainable transport network and green infrastructure could create a wider sustainability network to further improve resilience against climate change.	The policy has positive effects as there is reference to minimising harm to the significance of heritage assets and their setting, in terms of scale, siting and appearance.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to physical resources, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on supporting measures to lower carbon emissions and promote energy efficiency of designated heritage assets.	None identified.

Policy Name	HSP PL6: Non-Designated Heritage Assets											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on non-designated heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on designated heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	+	+	+	D	P	Built environment, housing market, local population	When planning new housing developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing can promote sustainable development by preserving historical structures while meeting modern housing needs. This approach can	The policy has positive effects as the reuse of non-designated heritage assets as residential properties can help to diversify the housing mix.	The policy could be enhanced by making explicit reference to the reuse of non-designated heritage assets as residential properties to support levels of local demand.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on non-designated heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on non-designated heritage assets.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on non-designated heritage assets.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on non-designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on non-designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on non-designated heritage assets.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	+	+	D	P	Local economy, local population	Heritage preservation supports the tourism industry, which fuels demand for jobs in various fields, including hospitality, guiding services, event planning, and transportation	Adaptive reuse of heritage buildings can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as the reuse of heritage buildings as tourist attractions can diversity the local economy through cultural tourism.	The policy could be enhanced by making explicit reference to the economic benefits of conserving and enhancing non-designated heritage assets.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	D	P	Local economy, local population, town centres	Heritage assets collectively enrich the cultural landscape of a town centre, making it a more attractive place to live and visit.	Adaptive reuse of heritage buildings can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as the reuse of non-designated heritage assets in town centres can enhance their vitality.	The policy could be enhanced by making explicit reference to the social and economic benefits of conserving and enhancing non-designated heritage assets.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on non-designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on non-designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on non-designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on non-designated heritage assets.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on non-designated heritage assets.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on non-designated heritage assets.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on non-designated heritage assets.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on non-designated heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	+	D	T	Local population, local communities	The presence of multiple non-designated heritage assets can collectively enhance community identity and pride. This can foster a sense of belonging and equality among residents	The recognition and preservation of non-designated heritage assets can empower marginalised groups by validating their cultural heritage and contributions. This can enhance their social standing and promote equality	The policy has positive effects as it references social or communal value as criteria for non-designated heritage asset status, as such recognising different communities and groups.	The policy could be enhanced by referencing ways community engagement will be delivered.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on non-designated heritage assets.	The policy could be enhanced by referencing ways community engagement will be delivered to ensure all communities are equally represented.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on non-designated heritage assets.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on non-designated heritage assets.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	++	D	T	Local population, local communities	The presence of multiple non-designated heritage assets can collectively enhance community identity and pride. This can foster a sense of belonging and equality among residents	The recognition and preservation of non-designated heritage assets can empower marginalised groups by validating their cultural heritage and contributions. This can enhance their social standing and promote equality	The policy has positive effects as it references social or communal value as criteria for non-designated heritage asset status, as such recognising different communities and groups which can create belonging and community cohesion.	The policy could be enhanced by referencing ways community engagement will be delivered to ensure all members of the Tameside community are equally represented.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on non-designated heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on non-designated heritage assets.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on non-designated heritage assets.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on non-designated heritage assets.	
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on non-designated heritage assets.	
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on non-designated heritage assets.	
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on non-designated heritage assets.	
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on non-designated heritage assets.	
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on non-designated heritage assets.	

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on non-designated heritage assets.	
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on non-designated heritage assets.	
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on non-designated heritage assets.	
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on non-designated heritage assets.	
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on non-designated heritage assets.	

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on non-designated heritage assets.	
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on non-designated heritage assets.	
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on non-designated heritage assets.	
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on non-designated heritage assets.	
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on non-designated heritage assets.	

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on non-designated heritage assets.	
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on non-designated heritage assets.	
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on non-designated heritage assets.	The policy could be enhanced by referencing the need to consider climate change mitigation in the approach to non-designated heritage assets.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on non-designated heritage assets.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on non-designated heritage assets.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on non-designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on non-designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on non-designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on non-designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on non-designated heritage assets.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on non-designated heritage assets.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on non-designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources however the policy is focused on non-designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources however the policy is focused on non-designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources however the policy is focused on non-designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources however the policy is focused on non-designated heritage assets.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources however the policy is focused on non-designated heritage assets.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources however the policy is focused on non-designated heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy however the policy is focused on non-designated heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy however the policy is focused on non-designated heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy however the policy is focused on non-designated heritage assets.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy however the policy is focused on non-designated heritage assets.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	o	o	o	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	N/A	N/A	The policy has neutral effects as there is no reference to landscape and open space however the policy is focused on non-designated heritage assets.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	When planning new developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it references sensitively conserving and reusing non-designated heritage assets	The policy could be enhanced by explicitly referencing the conservation and enhancement of the setting of non-designated heritage assets, although this is mentioned in HSP PL2.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	When planning new developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it references sensitively conserving and reusing non-designated heritage assets	The policy could make explicit reference to how conserving non-designated heritage assets can strengthen local character.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	When planning new developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it references sensitively conserving and reusing non-designated heritage assets, which can be achieved through good design.	The policy could make explicit reference to ensuring high quality design when reusing non-designated heritage assets.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	When planning new developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it references sensitively conserving and reusing non-designated heritage assets	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+	+	++	D	P	Brownfield land, local population	Reusing multiple heritage assets can significantly boost the local economy by attracting tourists and investors. This increased economic activity can lead to higher property values and greater demand for housing	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it references sensitively conserving and reusing non-designated heritage assets	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on non-designated heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on non-designated heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	++	D	P	Brownfield land, local population	Reusing multiple heritage assets can significantly boost the local economy by attracting tourists and investors. This increased economic activity can lead to higher property values and greater demand for housing	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive effects as it references sensitively conserving and reusing non-designated heritage assets	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land contamination, however the policy is focused on non-designated heritage assets.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on non-designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste however the policy is focused on non-designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste however the policy is focused on non-designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste however the policy is focused on non-designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste however the policy is focused on non-designated heritage assets.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste however the policy is focused on non-designated heritage assets.	None identified.

Policy Name	HSP PL7: Landscapes, Townscape and											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on landscape, townscape and urban form.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on landscape, townscape and urban form.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on landscape, townscape and urban form.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on landscape, townscape and urban form.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on landscape, townscape and urban form.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on landscape, townscape and urban form.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on landscape, townscape and urban form.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on landscape, townscape and urban form.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on landscape, townscape and urban form.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on landscape, townscape and urban form.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	D	P	Built environment, housing market, local population	Implementing multiple design improvements in different areas can collectively boost local economies by attracting businesses, tourists, and residents. This increased economic activity can lead to higher property values and greater demand for housing	Thoughtful design can foster a sense of community by creating spaces that encourage social interaction and inclusivity. When multiple design interventions are harmonised, they can strengthen social bonds and make areas more cohesive and resilient	The policy has positive effects as there is reference to enhancing townscapes and other built environment features, which can contribute the vitality of town centres.	The policy could be enhanced by explicitly referencing the synergistic benefits of development that enhances townscapes.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	The policy could be enhanced by referencing the link between movement and place, and in particular the use of active modes.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	The policy could be enhanced by referencing the link between movement and place, and in particular the use of active modes.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on landscape, townscape and urban form.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on landscape, townscape and urban form.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on landscape, townscape and urban form.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on landscape, townscape and urban form.	The policy could be enhanced by making explicit reference to ensuring landscapes, townscapes and urban form considers equality and inclusion.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on landscape, townscape and urban form.	The policy could be enhanced by making explicit reference to ensuring landscapes, townscapes and urban form considers equality and inclusion.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	D	P	Local population, local communities	Implementing multiple design improvements in different areas can collectively boost local economies by attracting businesses, tourists, and residents. This increased economic activity can lead to higher property values and greater demand for housing	Thoughtful design can foster a sense of community by creating spaces that encourage social interaction and inclusivity. When multiple design interventions are harmonised, they can strengthen social bonds and make areas more cohesive and resilient	The policy has positive effects as design codes will be prepared for areas and corridors of the Borough to ensure their design needs are addressed.	The policy could be enhanced by adding clearer design criteria accounting for different area contexts.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	o	o	o	I	T	Local population, local communities	Implementing multiple design improvements in different areas can collectively boost local economies by attracting businesses, tourists, and residents. This increased economic activity can lead to higher property values and greater demand for housing	Thoughtful design can foster a sense of community by creating spaces that encourage social interaction and inclusivity. When multiple design interventions are harmonised, they can strengthen social bonds and make areas more cohesive and resilient	The policy has positive effects as development that respects, aligns and enhances with Tameside's natural and built environment helps maintain local character which can contribute to a sense of belonging.	The policy could be enhanced by referencing clearer design criteria or considerations, such as scale, massing and integration with green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	I	T	Local population, local communities	The presence of various natural landscapes can enhance mental well-being by providing opportunities for relaxation, stress reduction, and mental restoration.	Landscapes that integrate various natural and social elements can foster greater community engagement and participation. This can lead to stronger social bonds and a more resilient community, enhancing overall health and well-being	The policy has positive effects as it aims to enhance the natural environment which can encourage people to spend more time outside, improving their health and wellbeing.	The policy could be enhanced by making explicit reference to the benefits of improving the landscape,townscape and urban form.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on landscape, townscape and urban form.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	+	+	+	D	P	Local population, local communities, open space, green and blue infrastructure	The presence of various natural landscapes can enhance mental well-being by providing opportunities for relaxation, stress reduction, and mental restoration.	Landscapes that integrate various natural and social elements can foster greater community engagement and participation. This can lead to stronger social bonds and a more resilient community, enhancing overall health and well-being	The policy has positive effects as it references enhancing natural environments and waterways.	The policy could be enhanced by making explicit reference to green and blue infrastructure within the policy wording, and making clearer what respect and enhance translates to.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	+	D	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	The presence of various natural landscapes can enhance mental well-being by providing opportunities for relaxation, stress reduction, and mental restoration.	Landscapes that integrate various natural and social elements can foster greater community engagement and participation. This can lead to stronger social bonds and a more resilient community, enhancing overall health and well-being	The policy has positive effects as it references enhancing natural environments and waterways.	The policy could be enhanced by making explicit reference to ensuring new developments integrate with and enable access to natural environments and waterways.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on landscape, townscape and urban form.	The policy could be enhanced by making explicit reference to ensuring landscapes, townscapes and urban form considers safety.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on landscape, townscape and urban form.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on landscape, townscape and urban form.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on landscape, townscape and urban form.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on landscape, townscape and urban form.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on landscape, townscape and urban form.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on landscape, townscape and urban form.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on landscape, townscape and urban form.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on landscape, townscape and urban form.	The policy could be enhanced by referencing the link between movement and place, and in particular the use of active modes.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	I	P	Local population, local communities, air quality	The cumulative effect of emissions from developments over time accelerates climate change, impacting natural habitats and species distributions	The interaction between different pollutants can amplify stress on natural environments.	The policy has positive effects as it references enhancing natural environments and waterways, which in turn, will improve air quality.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	+	+	I	P	Local population, local communities, air quality	The cumulative effect of emissions from developments over time accelerates climate change, impacting natural habitats and species distributions	The interaction between different pollutants can amplify stress on natural environments.	The policy has positive effects as it references supporting new developments that enhance natural environments and waterways, which in turn, will improve air quality.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on landscape, townscape and urban form.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Enhancing multiple landscapes and townscapes can improve habitat connectivity, allowing species to move more freely and access resources. This can lead to increased biodiversity and healthier ecosystems	Integrating diverse landscape and townscape enhancements can create more resilient ecosystems. For instance, combining green roofs, parks, and natural corridors can provide a variety of habitats that support different species, leading to greater biodiversity	The policy has positive effects as it references supporting new developments that enhance natural environments and waterways.	The policy could be enhanced by making explicit reference to respecting, protecting and enhancing designated sites.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Enhancing multiple landscapes and townscapes can improve habitat connectivity, allowing species to move more freely and access resources. This can lead to increased biodiversity and healthier ecosystems	Integrating diverse landscape and townscape enhancements can create more resilient ecosystems. For instance, combining green roofs, parks, and natural corridors can provide a variety of habitats that support different species, leading to greater biodiversity	The policy has positive effects as it references supporting new developments that enhance natural environments and waterways.	The policy could be enhanced by making explicit reference to respecting, protecting and enhancing designated sites and the habitats and species within them.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Enhancing multiple landscapes and townscapes can improve habitat connectivity, allowing species to move more freely and access resources. This can lead to increased biodiversity and healthier ecosystems	Integrating diverse landscape and townscape enhancements can create more resilient ecosystems. For instance, combining green roofs, parks, and natural corridors can provide a variety of habitats that support different species, leading to greater biodiversity	The policy has positive effects as it references supporting new developments that enhance natural environments and waterways.	The policy could be enhanced by making explicit reference to green and blue infrastructure within the policy wording, including protecting it and integrating it with new development.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Enhancing multiple landscapes and townscapes can improve habitat connectivity, allowing species to move more freely and access resources. This can lead to increased biodiversity and healthier ecosystems	Integrating diverse landscape and townscape enhancements can create more resilient ecosystems. For instance, combining green roofs, parks, and natural corridors can provide a variety of habitats that support different species, leading to greater biodiversity	The policy has positive effects as it references supporting new developments that enhance natural environments and waterways.	The policy could be enhanced by making explicit reference to access to green and blue infrastructure within the policy wording.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Enhancing multiple landscapes and townscapes can improve habitat connectivity, allowing species to move more freely and access resources. This can lead to increased biodiversity and healthier ecosystems	Integrating diverse landscape and townscape enhancements can create more resilient ecosystems. For instance, combining green roofs, parks, and natural corridors can provide a variety of habitats that support different species, leading to greater biodiversity	The policy has positive effects as it references supporting new developments that enhance natural environments and waterways.	The policy could be enhanced by making explicit reference to respecting, protecting and enhancing wildlife-rich habitats and species within them.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	-	-	I	P	Built environment, natural environment	Continuous efforts to protect landscapes and townscapes can enhance ecosystem resilience	Synergistic protection strategies can improve climate adaptation by creating more resilient landscapes and townscapes	The policy has negative effects as whilst it references enhancing natural landscapes and heritage assets, it does not reference protecting them from the effects of climate change.	The policy could be enhanced by making explicit reference to protecting landscapes and townscapes from the effects of climate change.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on landscape, townscape and urban form.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on landscape, townscape and urban form.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on landscape, townscape and urban form.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on landscape, townscape and urban form.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on landscape, townscape and urban form.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on landscape, townscape and urban form.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on landscape, townscape and urban form.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on landscape, townscape and urban form.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on landscape, townscape and urban form.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	+	+	+	D	P	Water courses, ground water, water supplies, local population	The quality of water resources may be affected cumulatively in conjunction with nearby development.	Cleaner water supports healthier ecosystems, promoting the growth and diversity of aquatic plants and animals.	The policy has positive effects as whilst it does not reference the Water Directive Framework, its objectives align with the policy.	The policy could be enhanced by making explicit reference to the Water Framework Directive.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	+	+	+	D	P	Water courses, ground water, water supplies, local population	The quality of water resources may be affected cumulatively in conjunction with nearby development.	Cleaner water supports healthier ecosystems, promoting the growth and diversity of aquatic plants and animals.	The policy has positive effects as it references supporting new development that respects and enhances waterways.	The policy could be enhanced by making explicit reference to protecting landscapes and townscapes from the pollution.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on landscape, townscape and urban form.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on landscape, townscape and urban form.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	+	+	+	D	P	Water courses, ground water, water supplies, local population	The quality of water resources may be affected cumulatively in conjunction with nearby development.	Cleaner water supports healthier ecosystems, promoting the growth and diversity of aquatic plants and animals.	The policy has positive effects as it references supporting new development that respects and enhances waterways.	The policy could be enhanced by making explicit reference to protecting landscapes and townscapes from the pollution.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on landscape, townscape and urban form.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on landscape, townscape and urban form.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on landscape, townscape and urban form.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on landscape, townscape and urban form.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on landscape, townscape and urban form.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative enhancement of landscapes and townscapes can boost local economies by attracting tourists and investors.	Integrating landscape and townscape enhancements with heritage conservation can create a unique and visually appealing environment.	The policy has positive effects as it references enhancing the natural environment of landscapes.	The policy could be enhanced by referencing how landscapes will be protected, and explicity referencing the public realm and the benefits of improvements to it.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative enhancement of landscapes and townscapes can boost local economies by attracting tourists and investors.	Integrating landscape and townscape enhancements with heritage conservation can create a unique and visually appealing environment.	The policy has positive effects as it references enhancing the historic environment and heritage assets.	The policy could be enhanced by referencing that the historic environment will be conserved or protected.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative enhancement of landscapes and townscapes can boost local economies by attracting tourists and investors.	Integrating landscape and townscape enhancements with heritage conservation can create a unique and visually appealing environment.	The policy has positive effects as it references respecting and enhancing the historic environment and heritage assets.	The policy could be enhanced by making explicit reference to the Peak District National Park and / or the maintenance of local character.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative enhancement of landscapes and townscapes can boost local economies by attracting tourists and investors.	Integrating landscape and townscape enhancements with heritage conservation can create a unique and visually appealing environment.	The policy has positive effects as it references preparing urban design codes to ensure new developments respect natural and historic landscapes.	The policy could be enhanced by setting out key considerations that will be consistent across urban design codes.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative enhancement of landscapes and townscapes can boost local economies by attracting tourists and investors.	Integrating landscape and townscape enhancements with heritage conservation can create a unique and visually appealing environment.	The policy has positive effects as it references enhancing the historic environment and heritage assets.	The policy could be enhanced by referencing that the historic environment and heritage assets will be conserved or protected.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on landscape, townscape and urban form.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	+	+	+	D	P	Natural environment	Improved environmental sustainability.	Synergistic enhancements can improve climate adaptation by creating more resilient landscapes and townscapes.	The policy has positive effects as it references enhancing the natural environment of landscapes.	The policy could be enhanced by making explicit reference to agricultural land and soils and their protection.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	+	+	+	D	P	Natural environment	Improved environmental sustainability.	Synergistic enhancements can improve climate adaptation by creating more resilient landscapes and townscapes.	The policy has positive effects as it references enhancing the natural environment of landscapes.	The policy could be enhanced by making explicit reference to agricultural land and soils and their protection.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on landscape, townscape and urban form.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on landscape, townscape and urban form.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	+	+	+	D	P	Natural environment	Improved environmental sustainability.	Synergistic enhancements can improve climate adaptation by creating more resilient landscapes and townscapes.	The policy has positive effects as it references enhancing the natural environment of landscapes.	The policy could be enhanced by making explicit reference to peat and its protection.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on landscape, townscape and urban form.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on landscape, townscape and urban form.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on landscape, townscape and urban form.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on landscape, townscape and urban form.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on landscape, townscape and urban form.	None identified.

Policy Name	HSP PL8: Design and Amenity											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on design and amenity of new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on design and amenity of new developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	+	+	+	I	P	Built environment, housing market, local population			The policy has positive effects as it focuses on design and space standards for development, which can help deliver a mix of properties.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	I	P	Built environment, housing market, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references connecting housing land to green infrastructure.	The policy could be enhanced by stating that where practicable, residential development creates, enhances or integrates with routes to employment land, centres and other places of interest.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	+	+	+	D	P	Built environment, housing market, local population	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of energy efficient measures.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to pitches/plots, however the policy is focused on design and amenity of new developments.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on design and amenity of new developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education and training, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on design and amenity of new developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	+	+	I	P	Local economy, local population	Delivering mixed-use schemes in different locations over time can foster lively, versatile communities and broaden the scope of local economic opportunities.	Combining adaptable building forms with strong placemaking and green infrastructure can attract creative and leisure enterprises, helping to diversify the economy beyond its traditional base.	The policy has positive effects as it references encouraging mixed-use development and states that employment development must be designed to be adaptable to future uses.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	I	P	Local economy, local population, town centres	Without careful planning, the cumulative effects of urban design can exacerbate economic disparities, with certain areas benefiting more than others	Well-designed urban areas can attract businesses and industries, leading to job creation and economic growth.	The policy has positive effects as it references considerations for design and amenity within centres.	The policy could be enhanced with stronger design principles for centres, or cross-reference to policies within the Centres theme.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	+	I	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references accessible places with design standards, prioritising non-highway modes which can help support scale and spatial distribution of development.	The policy could be enhanced by referencing that there will be no unacceptable impacts on the surrounding network even when a development is considered cumulatively.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	+	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references prioritising sustainable modes and good access design, which can enhance transport connectivity.	The policy could be enhanced by stating that where practicable, development creates, enhances or integrates with routes to key services, facilities and other places of interest, or cross-referencing policies within the Transport theme.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on design of residential additions, alterations and extensions.	The policy could be enhanced by adding considerations for utilites, such as in the Layout clause.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	++	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as itreferences prioritising sustainable modes and good access design, including standards and measures that directly and indirectly support uptake of active and sustainable modes.	The policy could be enhanced by stating that where practicable, development creates, enhances or integrates with routes to key services, facilities and other places of interest, or link promotion of sustainable modes to public spaces and safety.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	+	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references prioritising sustainable modes and good access design, including standards and measures that directly and indirectly support uptake of active and sustainable modes, which will minimise impact on the local envionment and public health.	The policy could be enhanced by explicitly referencing safety in the movement and accessibility clause.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references integrating with existing street patterns and circulation routes	The policy could be enhanced by stating that where practicable, development creates new cycling and walking routes that contribute to a wider network.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	+	+	I	P	Local population, lower socio-economic groups and deprived areas	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as appropriate application of the design and amenity policy can indirectly lead to reduced deprivation, such as through healthy and sustainable homes that meet diverse needs.	The policy could be enhanced by explicitly referencing that the policy will improve living standards.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	+	+	I	P	Local population, lower socio-economic groups and deprived areas	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as appropriate application of the design and amenity policy can indirectly lead to reductions across the domains of the IMD, such as Living Environment.	The policy could be enhanced by explicitly referencing that the policy will improve living standards.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	++	I	T	Local population, local communities	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it encourages inclusive design, safe public spaces and communal environments that encourage interaction.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	++	D	P	Local population, local communities	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it promotes accessible design standards, such as through meeting wheelchair user standards in new homes of major developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	+	+	++	D	T	Local population, local communities	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it promotes accessible design standards, such as through meeting wheelchair user standards in new homes of major developments.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	I	P	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references the forthcoming Character and Design Assessment, which should contain detail relating to the the needs of different areas.	The policy could be enhanced by explicitly referencing that design principles should reflect the distinct character and needs of different areas.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	++	++	D	T	Local population, local communities	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it encourages inclusive design, safe public spaces and communal environments that encourage interaction whilst meeting diverse needs at the household level.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	++	D	T	Local population, local communities	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can compound a network effect, enhancing the overall connectivity of active travel routes and encouraging uptake.	The policy has positive effects as it contains several clauses which relate directly or indirectly to health and active lifestyles, such as prioritising sustainable transport, preventing pollution, creating safe spaces and creating homes with design that enhances quality of life - all of which supports improvements in determinants of health.	The policy could be enhanced by stating that where practicable, development creates new cycling and walking routes that contribute to a wider network.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	+	+	+	D	T	Local population, local communities	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it contains several clauses which support improvements in determinants of health, which can help narrow health inequality gaps over time.	The policy could be enhanced by stating that local needs or deprived communities may also be considered in Design and Amenity provision.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	+	++	++	D	P	Local population, local communities, open space, green and blue infrastructure	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it contains several clauses which support increases in the quantity and quality of active environments, open spaces and green/blue infrastructure, such as 4. Nature and Environment relating to tree planting, 8. Residential Development relating to provision of outdoor amenity space, and 3. Movement and Accessibility relating to active travel and design.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	++	++	D	P	Local population, local communities, open space, green and blue infrastructure	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it contains several clauses which promote access to recreational facilities, open spaces and green/blue infrastructure, such as 4. Nature and Environment relating to connecting to blue and green infrastructure and 8. Residential Development relating to provision of outdoor amenity space.	The policy could be enhanced by explicitly referencing wellbeing, leisure and recreational benerfits from these spaces.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	++	D	P	Local population, local communities	Application of natural surveillance principles and inclusive public space design across multiple developments gradually creates safer neighbourhoods	Combining safe, well-overlooked public spaces with mixed-use development and active travel routes creates vibrant areas with high footfall, reducing crime risk	The policy has positive effects as it refers to providing safe public spaces and developments that encourage surveillance and reduce crime, fear of crime and anti-social behaviour	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	+	+	D	P	Local population, local communities, healthcare facilities	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it refers to providing shared outdoor amenity spaces, which could be regarded as community well-being assets	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	++	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on design and amenity of new developments.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	++	D	P	Local population, local communities, sports facilities	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it refers to provision of play equpiment, where appropriate.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education levels, however the policy is focused on design and amenity of new developments.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education and skill levels, however the policy is focused on design and amenity of new developments.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references providing an effective layout promoting efficient use of land, integrating with existing street patterns and circulation routes and prioritising sustainable transport, which is more efficient.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	+	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references prioritising sustainable modes including public transport in design of new development, which could reduce reliacne on private vehicles.	The policy could be enhanced by explicitly referencing safety in the movement and accessibility clause, for example, around public transport stops.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	The increased number of residents using the transport network may reduce quality of services unless more are provided	Efficient transport systems reduce travel time and costs, leading to increased productivity and economic efficiency	The policy has positive effects as it references prioritising sustainable transport and active modes in new development design, referencing design standards to support this.	The policy could be enhanced by explicitly referencing safety in the movement and accessibility clause, for example, around public transport stops.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	++	I	P	Local population, local communities, air quality	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it references pollution control and supporting active travel.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	+	++	I	P	Local population, local communities, air quality	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it references pollution control for new developments.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on design and amenity of new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated wildlife and geological sites, however the policy is focused on design and amenity of new developments of new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated wildlife and geological sites, however the policy is focused on design and amenity of new developments of new developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	++	D	P	Local population, local communities, open space, green and blue infrastructure	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it contains several clauses which support and enhance multifucntional green/blue infrastructure, such as 4. Nature and Environment relating to tree planting and connecting to green/blue infrastrcture to enhance and protect biodiversity	The policy could be enhanced by explicitly referencing wellbeing, leisure and recreational benerfits from these spaces.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	++	D	P	Local population, local communities, open space, green and blue infrastructure	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it contains several clauses which support and enhance multifucntional green/blue infrastructure, such as 4. Nature and Environment relating to tree planting and connecting to green/blue infrastrcture to enhance and protect biodiversity	The policy could be enhanced by explicitly referencing wellbeing, leisure and recreational benerfits from these spaces.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it contains several clauses which support and enhance multifucntional green/blue infrastructure, such as 4. Nature and Environment relating to tree planting and connecting to green/blue infrastrcture to enhance and protect biodiversity	The policy could be enhanced by explicitly referencing wildlife, or that design should support habitat corridors
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	+	+	+	D	P	Built environment, natural environment	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it contains clauses which refer to responding to climate change through design, including specific environmental mitigation (c.4), and efficient and resilient resource use (c.7).	The policy could be enhanced by offering more adaptation measures at the household level,
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	+	+	+	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to designated peatland, however the policy is focused on design and amenity of new developments of new developments.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	+	+	++	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it contains clauses which refer to responding to climate change through design, including specific environmental mitigation that constitutes nature-based solutions.	The policy could be enhanced by offering more nature-based solution examples at the household design level,
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to restricting development in flood risk areas, however the policy is focued on design and amenity of new developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	+	+	+	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of green space from repeated additions reduces biodiversity and permeable surfaces over time.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as there is reference to measures to manage flood risk in c.4.	The policy could be enhanced by referencing considerations for material choice and roof area/pitch can affect run-off rates and in turn flood risk.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	+	+	+	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of green space from repeated additions reduces biodiversity and permeable surfaces over time.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as there is reference to measures to manage flood risk in c.4.	The policy could be enhanced by referencing considerations for material choice and roof area/pitch can affect run-off rates and in turn flood risk.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	+	+	+	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of green space from repeated additions reduces biodiversity and permeable surfaces over time.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as there is reference to measures to manage flood risk in c.4.	The policy could be enhanced by referencing considerations for material choice and roof area/pitch can affect run-off rates and in turn flood risk.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	+	+	+	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of green space from repeated additions reduces biodiversity and permeable surfaces over time.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as there is reference to measures to manage flood risk in c.4.	The policy could be enhanced by referencing sustainable drainage systems and other management measures.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	+	++	++	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of green space from repeated additions reduces biodiversity and permeable surfaces over time.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as there is reference to measures to manage flood risk in c.4.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	+	+	+	D	P	Water courses, ground water, water supplies, local population	Encouraging access to waterside environments through active travel links rather than highways can minimise the risk of pollution to the water environment.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as preventing water pollution is explicity mentioned.	The policy could be enhanced by referencing sustainable drainage systems and other management measures.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	+	+	++	D	T	Water courses, ground water, water supplies, local population	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency and efficient and resilient use of water.	The policy could be enhanced by referencing examples of measures to support water efficiency
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	+	+	+	D	P	Water courses, ground water, water supplies, local population	Incremental loss of green space from repeated additions reduces biodiversity and permeable surfaces over time.	Design improvements paired withnature-based resilience enhance both neighbourhood character and climate resilience.	The policy has positive effects as there is reference to measures to manage flood risk, which can constitute water manaegment infrastructure.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	+	+	++	I	P	Local population, local communities, air quality	Consistent application of space standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better health and living conditions over time.	Integrating walking, wheeling and cycling routes of new developments with existing routes in a safe and accessible manner can reduce deprivation levels as people have easier access to cheaper and safe mobility connecting them to opportuniteis	The policy has positive effects as it references pollution control for new developments.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	+	+	++	D	T	Water courses, ground water, water supplies, local population	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency and efficient and resilient use of water.	The policy could be enhanced by referencing examples of measures to support water efficiency
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	+	+	+	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	+	+	+	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	++	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments, and prioritising sustainable modes of transport.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	+	+	+	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	++	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better landscape quality and public spaces.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it focuses on better design and open space outcomes through considerations of social, environmental and housing needs and alignment with existing context and identity	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+/?	+/?	+/?	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	When planning new developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive/uncertain effects as it references new developments responding positively to heritage assets, however, this does not mean the heritage asset will be conserved.	The policy could be enhanced by explicitly referencing the conservation and enhancement of the setting of non-designated heritage assets, or cross-referncing to HSP PL2.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	++	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better landscape quality and public spaces.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it focuses on better design and open space outcomes through considerations of social, environmental and housing needs and alignment with existing context and identity	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	++	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better landscape quality and public spaces.	Combining well-designed housing, inclusive public spaces, and sustainable travel connections delivers a combined benefit for social inclusion and community well-being that exceeds what each element could achieve on its own	The policy has positive effects as it focuses on better design and open space outcomes through considerations of social, environmental and housing needs and alignment with existing context and identity	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+/?	+/?	+/?	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	When planning new developments, the cumulative impact of heritage assets must be considered to ensure that new constructions complement the historic environment	Adaptive reuse of heritage buildings for housing and commercial purposes can promote sustainable development by preserving historical structures while meeting modern needs. This approach can create synergies between heritage conservation and urban development	The policy has positive/uncertain effects as it references new developments responding positively to heritage assets, however, this does not mean the heritage asset will be conserved.	The policy could be enhanced by explicitly referencing the conservation and enhancement of the setting of non-designated heritage assets, or cross-referncing to HSP PL2.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Natural environment	Consistent application of design standards, accessibility, and amenity requirements across developments improves overall housing quality, contributing to better landscape quality and public spaces.	Uncoordinated efforts in land-use planning and transport planning can lead to inefficient and slower growth	The policy has negative effects as there is no reference to prioirtising sustainable locations, but development in unsustainable locations can dampen the ability to reach transport, health and place outcomes	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	+	+	+	D	P	Natural environment	Improved environmental sustainability.	Synergistic enhancements can improve climate adaptation by creating more resilient landscapes and townscapes.	The policy has positive effects as it references enhancing the natural environment through pollution control and nature based soultions	The policy could be enhanced by making explicit reference to agricultural land and soils and their protection.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	+	+	+	D	P	Natural environment	Widespread remediation improves soil and water quality, reducing long-term environmental and health risks.	Synergistic enhancements can improve climate adaptation by creating more resilient landscapes and townscapes.	The policy has positive effects as it references enhancing the natural environment through pollution control and nature based soultions	The policy could be enhanced by making explicit reference to agricultural land and soils and their protection.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	+	D	P	Brownfield land, local population	Widespread remediation improves soil and water quality, reducing long-term environmental and health risks.	Combining remediation with sustainable drainage systems and green infrastructure creates multifunctional spaces that manage water, improve biodiversity, and enhance amenity.	The policy has positive effects as it refers to addressing land contamination.	The policy could be enhanced by explicity refercning previously developed land.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+	+	+	D	P	Brownfield land, local population	Widespread remediation improves soil and water quality, reducing long-term environmental and health risks.	Combining remediation with sustainable drainage systems and green infrastructure creates multifunctional spaces that manage water, improve biodiversity, and enhance amenity.	The policy has positive effects as it refers to addressing land contamination.	The policy could be enhanced by explicity refercning previously developed land.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to designated peatland, however the policy is focused on design and amenity of new developments of new developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	+	+	+	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	+	+	+	D	P	Built environment, natural environment	Adoption of energy-efficient design and nature-based solutions improves long-term sustainability and reduces carbon emissions collectively.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references resource efficiency, efficient and resilient use of energy and resilient developments.	The policy could be enhanced by referencing examples of renewable and low-carbon energy technology.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	+	+	+	I	P	Utility network	Provision of segregated waste storage across developments improves recycling rates borough-wide over time.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references providing accessible and convenient waste management facilities and well designed refuse and service areas, which can combine to indirectly promote movement up the waste hierarchy.	The policy could be enahnced by requiring new developments to demonstrate measures to minimise waste.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	+	+	+	I	P	Utility network	Provision of segregated waste storage across developments improves recycling rates borough-wide over time.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references providing accessible and convenient waste management facilities and well designed refuse and service areas, which can combine to indirectly promote movement up the waste hierarchy.	The policy could be enahnced by requiring new developments to demonstrate measures to minimise waste.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	+	+	+	I	P	Utility network	Provision of segregated waste storage across developments improves recycling rates borough-wide over time.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references providing accessible and convenient waste management facilities and well designed refuse and service areas, which can combine to indirectly promote movement up the waste hierarchy.	The policy could be enahnced by requiring new developments to demonstrate measures to minimise waste.

Policy Name	HSP PL9: Design of Residential Additions,											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land quantity, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land quantity, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	+	+	+	D	P	Built environment, housing market, local population	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references scale and massing of developments, although it is largely focused on householder applications so the extent of the effect is limited.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land connectivity, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	+	+	+	D	P	Built environment, housing market, local population	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to pitches/plots, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education and training, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to the economy, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	o	o	o	I	P	Local economy, local population, town centres	N/A	N/A	The policy has neutral effects as there is no reference to town centres, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to utilities, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	+	I	P	Transport network, road network, road users, local population	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references appropriate retention of off-street parking, which can prevent overspill parking on streets that affects safety and active mobility.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	+	D	T	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as measures that minimise harm to neighbouring amenity can help foster good relations.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	+	D	T	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references ensuring additions, alterations or extensions do not affect disabled access.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	+	+	+	D	T	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references ensuring additions, alterations or extensions do not affect disabled access.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	I	P	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references the Tameside Character and Place Assessment and Design SPDs as guidance for applicants, which should contain detail relating to the the needs of different areas.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	D	T	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as measures that minimise harm to neighbouring amenity can help foster good relations and a sense of belonging due to the preservation of local character.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-	-	-	I	P	Local population, local communities	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has negative effects as there is no reference to community safety and design, even though residential alterations, additions and extensions can affect this.	The policy could be strengthened by linking the references to privacy, visual intrusion and light to community safety, for example.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	I	P	Local population, local communities, air quality	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions, which can minimise emissions and improve air quality.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	+	+	I	P	Local population, local communities, air quality	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions, which can minimise emissions and improve air quality.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated wildlife and geological sites, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated wildlife and geological sites, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references preserving amenity space and natural features such as communal outdoor space, which can act as multifunctional green infrastructure.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references preserving amenity space and natural features such as communal outdoor space, which can act as multifunctional green infrastructure.	The policy could be enhanced by referencing that natural features contribute to more than just visual amenity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references encouraging householders to deliver biodiversity net gain, providing examples.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	+	+	+	I	P	Built environment, natural environment	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references encouraging householders to protect mature trees, deliver biodiversity net gain and energy efficiency improvements, which can enhance climate change resilience.	The policy could be enhanced by referencing the link between climate change and preservation and enhancement of nature, for example.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	+	+	+	D	P	Built environment, natural environment	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	+	+	+	I	P	Built environment, natural environment	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references encouraging to deliver biodiversity net gain, providing examples, which can act as nature-based solutions.	The policy could be enhanced by explicity referencing nature-based solutions.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	-	-	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of garden space from repeated additions reduces biodiversity and permeable surfaces over time.	Extensions plus hardstanding for parking together increase surface water runoff and reduce green infrastructure benefits.	The policy has negative effects as there is no reference to consideration of increased run-off rates that can result from alterations, additions and extentsions.	The policy could be enhanced by referencing considerations for material choice and roof area/pitch can affect run-off rates and in turn flood risk.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Incremental loss of garden space from repeated additions reduces biodiversity and permeable surfaces over time.	Extensions plus hardstanding for parking together increase surface water runoff and reduce green infrastructure benefits.	The policy has negative effects as there is no reference to consideration of increased run-off rates that can result from alterations, additions and extentsions.	The policy could be enhanced by referencing considerations for material choice and roof area/pitch can affect run-off rates and in turn flood risk.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on design of residential additions, alterations and extensions.	The policy could be enhanced by referencing sustainable drainage systems alongside the biodiversity net gain examples.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	-	-	-	D	T	Water courses, ground water, water supplies, local population	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has negative effects as there is no reference to waterefficiency, even though this could be recommended in the same way as energy efficiency or biodiversity net gain is.	The policy could be enhanced by referencing improvements to water efficiency and recycling as part of additions, alterations, and extensions.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	+	+	+	D	P	Energy infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	+	+	+	D	P	Energy infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions.	The policy could be enhanced by referencing the potential for sustainable energy generation, such as solar roofing.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	+	D	P	Energy infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions, which promotes a reduction in direct and indirect GHG emissions.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	+	+	+	D	P	Energy infrastructure	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references incorporation of energy-efficient materials and systems to residential additions, alterations and extensions.	The policy could be enhanced by referencing the potential for sustainable energy generation, such as solar roofing.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	+	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references the Tameside Character and Place Assessment and Design SPDs as guidance for applicants as well as protecting visual amenity, which could improve landscape quality.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	-	-	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has negative effects as it does not reference possible interface and affect on heritage assets and their setting.	The policy could cross-reference HSP PL2 and PL5, for example.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	+	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references the Tameside Character and Place Assessment and Design SPDs as guidance for applicants as well as referencing character and design quality.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	+	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references the Tameside Character and Place Assessment and Design SPDs as guidance for applicants as well as referencing character and design quality.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	-	-	I	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has negative effects as it does not reference possible interface and affect on heritage assets and their setting.	The policy could cross-reference HSP PL2 and PL5, for example.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+	+	+	D	P	Brownfield land, local population	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as appropriate alterations, additions or extenstions on developed land can foster efficient use of land and sustainable use of materials.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to agricultural land or soil, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to agricultural land or soil, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	+	D	P	Brownfield land, local population	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as appropriate alterations, additions or extenstions on developed land can foster efficient use of land and sustainable use of materials.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land contamination, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	+	+	+	D	P	Natural environment	The cumulative impact of residential developments with high design quality can improve the attractiveness of an area, raising property values.	Design improvements paired with energy efficiency upgrades enhance both neighbourhood character and climate resilience.	The policy has positive effects as it references energy-efficient materials.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to natural resource use, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on design of residential additions, alterations and extensions.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on design of residential additions, alterations and extensions.	None identified.

Policy Name	HSP PL10: Design of Commercial Frontages											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on the design of commercial frontages.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on the design of commercial frontages.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on the design of commercial frontages.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on the design of commercial frontages.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on the design of commercial frontages.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing land, however the policy is focused on the design of commercial frontages.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on the design of commercial frontages.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on the design of commercial frontages.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on the design of commercial frontages.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment land, however the policy is focused on the design of commercial frontages.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	++	D	P	Local economy, local population, town centres	Without careful planning, the cumulative effects of urban design can exacerbate economic disparities, with certain areas benefiting more than others	Well-designed urban areas can attract businesses and industries, leading to job creation and economic growth.	The policy has positive effects as it focuses on the design of commercial frontages which can make town centres more attractive.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport and utilities, however the policy is focused on the design of commercial frontages.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport and utilities, however the policy is focused on the design of commercial frontages.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as there is no reference to transport and utilities, however the policy is focused on the design of commercial frontages.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as there is no reference to transport and utilities, however the policy is focused on the design of commercial frontages.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport and utilities, however the policy is focused on the design of commercial frontages.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to transport and utilities, however the policy is focused on the design of commercial frontages.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on the design of commercial frontages.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on the design of commercial frontages.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on the design of commercial frontages.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	++	D	P	Local population, local communities	Incorporating universal design principles makes centres accessible, improving equality.	Designing spaces that are accessible and welcoming to all can enhance social cohesion and reduce inequality	The policy has positive effects as it references making public entrances accessible to all and relevant accessibility standards.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	+	+	++	D	T	Local population, local communities	Incorporating universal design principles makes centres accessible, improving equality.	Designing spaces that are accessible and welcoming to all can enhance social cohesion and reduce inequality	The policy has positive effects as it references making public entrances accessible to all and relevant accessibility standards.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality of opportunity, however the policy is focused on the design of commercial frontages.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, local communities	Incorporating universal design principles makes centres accessible, improving equality.	Designing spaces that are accessible and welcoming to all can enhance social cohesion and reduce inequality	The policy has positive effects as active and welcoming frontages in accordance with local character can create a sense of belonging and community cohesion.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on the design of commercial frontages.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on the design of commercial frontages.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on the design of commercial frontages.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as there is no reference to health and wellbeing, however the policy is focused on the design of commercial frontages.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	++	++	D	P	Local population, local communities	Reduced risk of crime.	Well-designed entrances with clear sightlines and good lighting can enhance natural surveillance, making it easier for people to observe and report suspicious activities. This can deter criminal behavior and improve overall safety.	The policy has positive effects as it references making public entrances safe and welcoming with reference to key design features.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on the design of commercial frontages.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on the design of commercial frontages.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as there is no reference to social infrastructure, however the policy is focused on the design of commercial frontages.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on the design of commercial frontages.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on the design of commercial frontages.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on the design of commercial frontages.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on the design of commercial frontages.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as there is no reference to sustainable transport, however the policy is focused on the design of commercial frontages.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on the design of commercial frontages.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on the design of commercial frontages.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to air quality, however the policy is focused on the design of commercial frontages.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the design of commercial frontages.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the design of commercial frontages.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the design of commercial frontages.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the design of commercial frontages.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to biodiversity, green and blue infrastructure, and geodiversity, however the policy is focused on the design of commercial frontages.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on the design of commercial frontages.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on the design of commercial frontages.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on the design of commercial frontages.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flooding, however the policy is focused on the design of commercial frontages.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on the design of commercial frontages.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on the design of commercial frontages.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on the design of commercial frontages.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on the design of commercial frontages.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on the design of commercial frontages.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on the design of commercial frontages.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on the design of commercial frontages.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on the design of commercial frontages.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on the design of commercial frontages.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on the design of commercial frontages.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references retaining and restoring frontages of historic or architectural significance and integration of design with the surrounding buildings and streetscape, which can improve the public realm.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references retaining and restoring frontages of historic or architectural significance.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references retaining and restoring frontages of historic or architectural significance and integration of design with the surrounding buildings and streetscape to compliment local character.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references retaining and restoring frontages of historic or architectural significance and integration of design with the surrounding buildings and streetscape to compliment local character.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references retaining and restoring frontages of historic or architectural significance.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on the design of commercial frontages.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on the design of commercial frontages.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on the design of commercial frontages.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	+	I	P	Brownfield land, local population	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references retaining and restoring frontages of historic or architectural significance.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on the design of commercial frontages.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to land resources, however the policy is focused on the design of commercial frontages.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on the design of commercial frontages.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on the design of commercial frontages.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on the design of commercial frontages.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on the design of commercial frontages.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste, however the policy is focused on the design of commercial frontages.	None identified.

Policy Name	HSP PL11: Outdoor Advertisements and Signage											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however, the policy is focused on outdoor advertisements and signage.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however, the policy is focused on outdoor advertisements and signage.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however, the policy is focused on outdoor advertisements and signage.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however, the policy is focused on outdoor advertisements and signage.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however, the policy is focused on outdoor advertisements and signage.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as it does not reference housing land, however, the policy is focused on outdoor advertisements and signage.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however, the policy is focused on outdoor advertisements and signage.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as it does not reference employment land, however, the policy is focused on outdoor advertisements and signage.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	o	o	o	I	P	Local economy, local population, transport infrastructure	N/A	N/A	The policy has neutral effects as it does not reference employment land, however, the policy is focused on outdoor advertisements and signage.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as it does not reference employment land, however, the policy is focused on outdoor advertisements and signage.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	D	P	Local economy, local population, town centres	Without careful planning, the cumulative effects of urban design can exacerbate economic disparities, with certain areas benefiting more than others	Well-designed urban areas can attract businesses and industries, leading to job creation and economic growth.	The policy has positive effects as consideration of design and character in relation to outdoor advertisements and signage can support the enhancements of town centres.	The policy could be enhanced by referencing urban spacesor centres.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as it does not reference the transport network, however, the policy is focused on outdoor advertisements and signage.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as it does not reference the transport network, however, the policy is focused on outdoor advertisements and signage.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has neutral effects as it does not reference utilities or digital infrastructure, however, the policy is focused on outdoor advertisements and signage.	The policy could be enhanced by referencing guidance for illumination relating to digital advertisements and signage.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	o	o	o	I	P	Transport network, road network, road users, local population	N/A	N/A	The policy has neutral effects as it does not reference the transport network, however, the policy is focused on outdoor advertisements and signage.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Without careful planning, outdoor signage and advertisements can harm and design of the local area, reducing the attractiveness of places.	Safe active travel routes removes barriers to walking, wheeling and cycling, enabling a greater uptake of sustainable transport.	The policy has positive effects as it references ensuring outdoor adverts and signage do not compromise active travel or highways safety.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference the transport network, however, the policy is focused on outdoor advertisements and signage.	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however, the policy is focused on outdoor advertisements and signage.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as it does not reference deprivation, however, the policy is focused on outdoor advertisements and signage.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however, the policy is focused on outdoor advertisements and signage.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however, the policy is focused on outdoor advertisements and signage.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	o	o	o	D	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however, the policy is focused on outdoor advertisements and signage.	The policy could be enhanced by referencing that outdoor advertisements and signage do not infringe on those with limited mobility.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference equality of opportunity, however, the policy is focused on outdoor advertisements and signage.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, local communities	Without careful planning, the cumulative effects of urban design can exacerbate economic disparities, with certain areas benefiting more than others	Well-designed urban areas can attract businesses and industries, leading to job creation and economic growth.	The policy has positive effects as consideration of design and character in relation to outdoor advertisements and signage can help create a sense of belonging and community cohesion.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health, however, the policy is focused on outdoor advertisements and signage.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health, however, the policy is focused on outdoor advertisements and signage.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference health, however, the policy is focused on outdoor advertisements and signage.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	o	o	o	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	N/A	N/A	The policy has neutral effects as it does not reference health, however, the policy is focused on outdoor advertisements and signage.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	o	o	o	D	P	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference health, however, the policy is focused on outdoor advertisements and signage.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	o	o	o	I	P	Local population, local communities, healthcare facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however, the policy is focused on outdoor advertisements and signage.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however, the policy is focused on outdoor advertisements and signage.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	o	o	o	I	P	Local population, local communities, sports facilities	N/A	N/A	The policy has neutral effects as it does not reference social infrastructure, however, the policy is focused on outdoor advertisements and signage.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however, the policy is focused on outdoor advertisements and signage.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as it does not reference education, however, the policy is focused on outdoor advertisements and signage.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference sustainable transport, however, the policy is focused on outdoor advertisements and signage.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	o	o	o	I	P	Transport network, road network, road users, local population, local environment	N/A	N/A	The policy has neutral effects as it does not reference sustainable transport, however, the policy is focused on outdoor advertisements and signage.	None identified.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Without careful planning, outdoor signage and advertisements can harm and design of the local area, reducing the attractiveness of places.	Safe active travel routes removes barriers to walking, wheeling and cycling, enabling a greater uptake of sustainable transport.	The policy has positive effects as it references ensuring outdoor adverts and signage do not compromise safety on active travel routes.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however, the policy is focused on outdoor advertisements and signage.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	-	-	I	P	Local population, local communities, air quality	Without careful planning, outdoor signage and advertisements can harm and design of the local area, reducing the attractiveness of places.	Reductions in energy consumption can benefit people and organisations through reduced energy costs.	The policy has negative impacts as it does not reference the potential for use of low-energy lighting where outdoor advertising or signage uses illumination or digital displays.	The policy could be enhanced by referencing the opportunities for advertising and signage that is more energy-efficient, or providing stronger guidance for control of illumination.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as it does not reference air quality, however, the policy is focused on outdoor advertisements and signage.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references ensuring conservation areas are protected from outdoor advertisements and signage.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however, the policy is focused on outdoor advertisements and signage.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however, the policy is focused on outdoor advertisements and signage.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as it does not reference biodiversity, green and blue infrastructure, and geodiversity, however, the policy is focused on outdoor advertisements and signage.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	I	P	Wildlife, landscapes and green and blue infrastructure	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references ensuring conservation areas are protected from outdoor advertisements and signage.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however, the policy is focused on outdoor advertisements and signage.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	-	-	-	I	P	Built environment, natural environment	Without careful planning, outdoor signage and advertisements can harm and design of the local area, reducing the attractiveness of places.	Reductions in energy consumption can benefit people and organisations through reduced energy costs.	The policy has negative impacts as it does not reference the potential for use of low-energy lighting where outdoor advertising or signage uses illumination or digital displays.	The policy could be enhanced by referencing the opportunities for advertising and signage that is more energy-efficient, or uses low-carbon technology.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however, the policy is focused on outdoor advertisements and signage.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as it does not reference climate change, however, the policy is focused on outdoor advertisements and signage.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flood risk, however, the policy is focused on outdoor advertisements and signage.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flood risk, however, the policy is focused on outdoor advertisements and signage.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flood risk, however, the policy is focused on outdoor advertisements and signage.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flood risk, however, the policy is focused on outdoor advertisements and signage.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flood risk, however, the policy is focused on outdoor advertisements and signage.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as it does not reference flood risk, however, the policy is focused on outdoor advertisements and signage.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference the Water Framework Directive, however, the policy is focused on outdoor advertisements and signage.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water features and pollution, however, the policy is focused on outdoor advertisements and signage.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water resources, however, the policy is focused on outdoor advertisements and signage.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water management, however, the policy is focused on outdoor advertisements and signage.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference pollution, however, the policy is focused on outdoor advertisements and signage.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as it does not reference water efficiency, however, the policy is focused on outdoor advertisements and signage.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	-	-	-	D	P	Energy infrastructure	Without careful planning, outdoor signage and advertisements can harm and design of the local area, reducing the attractiveness of places.	Reductions in energy consumption can benefit people and organisations through reduced energy costs.	The policy has negative impacts as it does not reference the potential for use of low-energy lighting where outdoor advertising or signage uses illumination or digital displays.	The policy could be enhanced by referencing the opportunities for advertising and signage that is more energy-efficient, or uses low-carbon technology.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however, the policy is focused on outdoor advertisements and signage.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	-	-	-	D	P	Energy infrastructure	Without careful planning, outdoor signage and advertisements can harm and design of the local area, reducing the attractiveness of places.	Reductions in energy consumption can benefit people and organisations through reduced energy costs.	The policy has negative impacts as it does not reference the potential for use of low-energy lighting where outdoor advertising or signage uses illumination or digital displays.	The policy could be enhanced by referencing the opportunities for advertising and signage that is more energy-efficient, or uses low-carbon technology.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as it does not reference energy, however, the policy is focused on outdoor advertisements and signage.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has postive effects as it references protecting the qualities of the historic environment and open spaces.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references ensuring the historic environment and conservation areas are protected from outdoor advertisements and signage.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references the design and character of outdoor advertisements and signage respond positively to the character and appearance of the wider area, including in Green Belt.	The policy could be enhanced with stronger wording regarding maintaining character.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references the design and character of outdoor advertisements and signage respond positively to the character and appearance of the wider area, including in Green Belt.	The policy could be enhanced with stronger wording regarding maintaining character.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Long-term conservation of cultural and historical assets	Combining modern design with heritage conservation creates a balanced and cohesive environment that respects historical significance while meeting contemporary needs	The policy has positive effects as it references ensuring the historic environment and conservation areas are protected from outdoor advertisements and signage.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however, the policy is focused on outdoor advertisements and signage.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however, the policy is focused on outdoor advertisements and signage.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however, the policy is focused on outdoor advertisements and signage.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however, the policy is focused on outdoor advertisements and signage.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as it does not reference land resources, however, the policy is focused on outdoor advertisements and signage.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as it does not reference land resources, however, the policy is focused on outdoor advertisements and signage.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however, the policy is focused on outdoor advertisements and signage.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however, the policy is focused on outdoor advertisements and signage.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however, the policy is focused on outdoor advertisements and signage.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however, the policy is focused on outdoor advertisements and signage.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as it does not reference waste, however, the policy is focused on outdoor advertisements and signage.	None identified.

Policy Name	HSP PL12: Design and Enhancement of the Waterside											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on supporting new developments to enhance waterside	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on supporting new developments to enhance waterside	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	I	P	Built environment, housing market, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as there is reference to improving public access to the waterside from new development, which can help improve connectivity to employment land, centres and green space	The policy could be enhanced by making reference to how the waterside can improve connectivity to employment land, centres and green space.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	+	I	P	Built environment, housing market, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as there is reference to improving public access to the waterside from new development, which can help improve connectivity to employment land, centres and green space.	The policy could be enhanced by making reference to how the waterside can improve the connectivity of employment land.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	I	P	Local economy, local population, town centres	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as there is reference to improving public access to the waterside from new development, conserving heritage and enhancing layout of waterways, all of which could enhance the vitality and viability of Tameside's town centres due to their integration with waterways.	The policy could be enhanced by making reference to how the waterside can improve the vitality and viability of town centres.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	++	D	P	Transport network, road network, road users, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links and measures to enable this, which helps to deliver a transport network that can support growth.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	+	D	P	Transport network, road network, road users, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has positive effects as there is reference to improving public access and connectivity to the waterside, including active travel and public transport.	The policy could be enhanced with more reference to the functional connectivity benefits of waterside links, such as to employment and town centres.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	-	-	-	D	P	Transport network, road network, road users, local population, utility network, digital network	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to utilities, even though increased waterside development could place pressure on drainage and water infrastructure.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	+	D	P	Transport network, road network, road users, local population	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to active modes of transport.	The policy could be enhanced by referencing maintenance of waterside paths and the approach to managing shared-space between different mobility modes.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	+	++	I	P	Transport network, road network, road users, local population, local environment	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes a safe transport network that minimise impacts on local environment and health, and is cognisant of the importance of surveillance and views on safety.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	++	D	P	Transport network, road network, road users, local population, local environment	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by foot and cycle paths, which will help open new routes and support connections to existing ones	None identified.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	+	I	T	Local population, local communities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as it focuses on improving waterside environments, which encourages people to utilise public spaces and foster social interactions, and is cognisant of the importance of layout and views.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	o	o	o	I	P	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to equality, however the policy is focused on supporting new developments to enhance waterside environments.	The policy could be enhanced by making greater reference to supporting access for all people and barrier removal to waterside environments.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to discrimination, however the policy is focused on supporting new developments to enhance waterside environments.	The policy could be enhanced by making greater reference to supporting access for all people and barrier removal to waterside environments.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	I	P	Local population, local communities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to accounting for the distinct waterside character of the area, and waterways flow through all different areas.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	I	T	Local population, local communities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improve waterside environments and encourages good design, which can help to establish communities that has sense of beloinging.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	+	I	T	Local population, local communities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to active modes of transport and encourages healthier lifestyles.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health inequalities, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	+	+	++	D	P	Local population, local communities, open space, green and blue infrastructure	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving waterside environments and public access to active travel infrastructure, which will increase the quantity and quality of open spaces and green and blue infrastructure.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	++	D	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving waterside environments and public access to active travel infrastructure, which promotes access to green and blue infrastrucutre.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	+	I	P	Local population, local communities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to opportunities for natural surveillance, designing out crime and the fear of crime.	The policy could be enhanced by strengthening the policy wording (i.e. 'provides natural surveillance' rather than 'opportunities for natural surveillance')
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	+	+	I	P	Local population, local communities, healthcare facilities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as it focuses on improving waterside environments and promoting access to them, which can be regarded as a community well-being assets.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	o	o	o	I	P	Local population, local communities, educational facilities	N/A	N/A	The policy has neutral effects as there is no reference to educational facilities, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	I	P	Local population, local communities, sports facilities	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as it focuses on improving waterside environments and promoting access to them, which can be regarded as community social infrastructure.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to clear street patterns and circulation routes, whislt waterside links can help take strain off the highway network, which promotes efficient patterns of movement.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	+	D	P	Transport network, road network, road users, local population	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to active modes of transport.	The policy could be enhanced by referencing maintenance of waterside paths and the approach to managing shared-space between different mobility modes.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	+	D	P	Transport network, road network, road users, local population	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to active modes of transport.	The policy could be enhanced by referencing maintenance of waterside paths and the approach to managing shared-space between different mobility modes.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	I	P	Local population, local communities, air quality	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to sustainable modes of transport and helps to improve air quality.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	+	+	I	P	Local population, local communities, air quality	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to sustainable modes of transport and helps to improve air quality.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to areas of poor air quality, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	o	o	o	I	P	Wildlife, landscapes and green and blue infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to designated sites, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	++	D	P	Wildlife, landscapes and green and blue infrastructure	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving waterside environments, which includes blue infrastructure.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	++	D	P	Wildlife, landscapes and green and blue infrastructure	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving waterside environments and promoting leisure, health, and wellbeing through exercise.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-/?	-/?	-/?	D	P	Wildlife, landscapes and green and blue infrastructure	Increased number of new developments near waterside may lead to increased pollution of waterways.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has uncertain / negative effects as whilst there is reference to contributing to biodiveristy, there is no indication of ho reference to safeguarding ecological networks at watersides, even though new development could affect these.	The policy could be enhanced by referencing how biodiversity will be enhanced and protected.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	-	-	I	P	Built environment, natural environment	Increased number of new developments near waterside may lead to increased risk of flood from hard surfacing.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to flood risk or climate change, even though extreme weather events may place greater risk on waterside developments.	The policy could be enhanced by referencing flood risk and climate change.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy technology, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to climate change, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to areas of high flood risk, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk mearues, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased number of new developments near waterside may lead to increased risk of flood from hard surfacing.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to ensuring developments do not increase flood risk, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to ensuring developments do not increase flood risk in relation to requirements for new developments near waterside environments.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	-	-	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased number of new developments near waterside may lead to increased risk of flood from hard surfacing.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has neutral effects as there is no reference to flood risk or climate change, even though extreme weather events may place greater risk on waterside developments.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	o	o	o	I	T	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood defences, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to flood risk management, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	-	-	-	D	P	Water courses, ground water, water supplies, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to Water Framework Directive, whereas the policy aims to supporting new developments to enhance waterside environments.	The policy could make more explicit reference to compliance with the Water Framework Directive in relation to waterside developments.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	-	-	-	D	P	Water courses, ground water, water supplies, local population	Encouraging access to waterside environments through active travel links can minimise the risk of pollution to the water environment.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to protecting water features from pollution, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to protecting water features in relation to the requirements for new developments that enhances waterside environments.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	-	-	-	D	T	Water courses, ground water, water supplies, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to controlling water consumpton from developments, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to controlling water consumption in relation to the requirements for new developments that enhances waterside environments.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	-	-	-	D	P	Water courses, ground water, water supplies, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to water management infrastructure, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to water management infrastructure in relation to the requirements for new developments that enhances waterside environments.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	-	-	-	D	P	Water courses, ground water, water supplies, local population	Encouraging access to waterside environments through active travel links can minimise the risk of pollution to the water environment.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to minimising the risk of pollution from new developments, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to minimising the risk of pollution in relation to the requirements for new developments that enhances waterside environments.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	-	-	-	D	T	Water courses, ground water, water supplies, local population	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to encouraging water efficiency of new developments, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to encouragning water efficiency in relation to the requirements for new developments that enhances waterside environments.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	-	-	-	D	P	Energy infrastructure	Increased number of new developments near waterside may lead to increased need for new infrastrucuture and increased consumption of resources.	Integrating with other development plans and infrastructure network can deliver a more sustainable growth of the wider region.	The policy has negative effects as there is no reference to energy efficiency in new developments, whereas the policy aims to support new developments near waterside environments.	The policy could make more explicit reference to encouraging energy demand reductions and energy efficiency in new developments, in relation to enhancing waterside environments.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy generation, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	+	I	P	Energy infrastructure	Encouraging access to waterside environments with active travel links can promote transition to more sustainable modes of transport.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to improving public access to the waterside by active travel links, which promotes the transition to active modes of transport and promotes reduction in greenhouse gas emissions.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy schemes, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is rerference to improving waterside environments an improving public access, which can provide open spaces and public realm.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to good design that relates to history and reusing heritage assets.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is reference to good design that relates well to the scale, massing, character, and history of the environment and landscape setting, which can help to strengthen the local character.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is rerference to good design that relates well to the scale, massing, character, and history of the environment and landscape setting.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Promoting good design that relates to the character and history of the environment can amplify the cultural and educational potential of local distinctiveness.	Integrating sport and recreation spaces with waterside developments can encourage physical activity and improve public health.	The policy has positive effects as there is rerference to good deisng that relates to history and reusing heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+	+	++	D	P	Brownfield land, local population	Reusing existing buildings and structures can reduce waste generated through construction and promote movement up the waste hierarchy.	Integrating new development locations with transport and logistic networks can support more efficiency in movements and promtoe sustainable construction methods.	The policy has positive effects as there is reference to reusing previously developed land existing buildings, structures and features of heritage value, which supports sustainable options for developments.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soil resources, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	+	+	D	P	Brownfield land, local population	Reusing existing buildings and structures can reduce waste generated through construction and promote movement up the waste hierarchy.	Integrating new development locations with transport and logistic networks can support more efficiency in movements and promtoe sustainable construction methods.	The policy has positive effects as there is reference to reusing existing buildings, structures and features of heritage value.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+	+	+	D	P	Brownfield land, local population	Reusing existing buildings and structures can reduce waste generated through construction and promote movement up the waste hierarchy.	Integrating new development locations with transport and logistic networks can support more efficiency in movements and promtoe sustainable construction methods.	The policy has positive effects as there is reference to previously developed land, reusing existing buildings, structures and features of heritage value, which could involve reductions in land contamination.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	+	+	+	D	P	Utility network	Reusing existing buildings and structures can reduce waste generated through construction and promote movement up the waste hierarchy.	Integrating new development locations with transport and logistic networks can support more efficiency in movements and promtoe sustainable construction methods.	The policy has positive effects as there is reference to reusing existing buildings, structures and features of heritage value.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	+	+	+	D	P	Utility network	Reusing existing buildings and structures can reduce waste generated through construction and promote movement up the waste hierarchy.	Integrating new development locations with transport and logistic networks can support more efficiency in movements and promtoe sustainable construction methods.	The policy has positive effects as there is reference to reusing existing buildings, structures and features of heritage value, which promotes movement up the waste hierarchy.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste generation, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to recycling of waste, however the policy is focused on supporting new developments to enhance waterside environments.	None identified.

Policy Name	HSP PL13: Design of Public Realm and Urban Spaces											
Ref	**Objective**	**Assessement Criteria**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permenant**	**Receptors and/or Affected Groups**	**Potential Cumulative Effects**	**Potential Synergistic Effects**	**Explaination Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on enhancing the design of public realm and urban spaces through	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on enhancing the design of public realm and urban spaces through	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	+	+	D	P	Built environment, housing market, local population	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to connect developments to green routes, active travel and public realms.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to housing, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	o	o	o	I	P	Built environment, housing market, local population	N/A	N/A	The policy has neutral effects as there is no reference to Gypsies, Travellers and Travelling Show People, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to employment, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	o	o	o	I	T	Local economy, local population, children and young people	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	+	+	D	P	Local economy, local population	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to connect developments to green routes, active travel, public transport and the public realm.	Amendment of typo in Movement and Connectivity a). 'shift away from public transport'
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	o	o	o	I	P	Local economy, local population	N/A	N/A	The policy has neutral effects as there is no reference to economy, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	+	+	I	P	Local economy, local population, town centres	N/A	N/A	The policy has positive effects as high-quality public realm is crucial to enhancing the vitality and viability of town centres.	The policy could be enhanced by specifically referencing centres.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	+	+	D	P	Transport network, road network, road users, local population	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to maximising opporutnities for active travel and connection to public transport in new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	+	+	D	P	Transport network, road network, road users, local population	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to maximising opporutnities for active travel and connection to public transport in new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	o	o	o	I	P	Transport network, road network, road users, local population, utility network, digital network	N/A	N/A	The policy has positive effects as there is reference to maximising opporutnities for active travel and connection to public transport in new developments.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to maximising opporutnities for active travel and connection to public transport in new developments, as well as reference to design guidance and quality measures.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	++	++	I	P	Transport network, road network, road users, local population, local environment	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to maximising opporutnities for active travel and connection to public transport in new developments, which minimises impacts on local environment and public health, as well as reference to design guidance which can help create a safe network.	None identified.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to maximise opporutnities for active travel and connection to public transport in new developments, which minimises impacts on local environment and public health.	The policy could be enhanced by explicitly referencing the creation of new routes.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on enhancing the design of public realm;, and urban spaces through developments.	None identified.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	o	o	o	I	P	Local population, lower socio-economic groups and deprived areas	N/A	N/A	The policy has neutral effects as there is no reference to deprivation, however the policy is focused on enhancing the design of public realm;, and urban spaces through developments.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	+	+	++	D	T	Local population, local communities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to enhancing public realm, which provides spaces for social interaction and can foster good relations, as well as safety and surveillance in these spaces.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	+	++	D	P	Local population, local communities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to providing inclusive and accessible design principles and interventions	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	+	+	++	D	T	Local population, local communities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to providing inclusive and accessible design principles and interventions	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	+	+	+	I	P	Local population, local communities	N/A	N/A	The policy has positive effects as there is reference to the design of public realm and urban spaces in a manner that considers and cuts across different area needs.	The policy could make more explicit reference to the needs of different areas in relation to the design requirements for public realm and urban spaces, such as for rural areas.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	+	+	D	T	Local population, local communities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to improving public realm and urban spaces, which can help to create a sense of belonging and community cohesion.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	+	++	I	T	Local population, local communities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to maximising opportutnities for active travel, which sipports a healthier lifestyle.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to health inequalities, however the policy is focused on enhancing the design of public realm, and urban spaces through developments.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	+	+	++	I	P	Local population, local communities, open space, green and blue infrastructure	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to improving public realm and active travel opportuntiies, as well as provision of green infrastructure.	None identified.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	+	+	++	I	P	Local population, local communities, open space, green and blue infrastructure, leisure and recreational facilities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to improving public realm and active travel opportuntiies, as well as provision of green infrastructure.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	+	+	++	D	P	Local population, local communities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to providing natural surveillance and lighting to encourage safety and design out crime.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	+	+	D	P	Local population, local communities, healthcare facilities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to enhancing connection to destinations and services, which includes healthcare facilities.	The policy could make more explicit reference to healthcare facilities in relation to improving connectivity to destinations and facilities.
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	+	+	D	P	Local population, local communities, educational facilities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to enhancing connection to destinations and services, which includes educational facilities.	The policy could make more explicit reference to educational facilities in relation to improving connectivity to destinations and facilities.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	+	+	D	P	Local population, local communities, sports facilities	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to enhancing connection to destinations and services, which includes social infrastructure.	The policy could make more explicit reference to social infrastructure in relation to improving connectivity to destinations and facilities.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.

8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	o	o	o	I	T	Local population, local communities	N/A	N/A	The policy has neutral effects as there is no reference to education, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to improving connectivity and connection to public transport, which can act as more efficient modes of transport and connected-well can reduce the need to travel.	None identified.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	+	+	D	P	Transport network, road network, road users, local population, local environment	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to improving connection to public transport.	The policy could be enhanced by making reference to safety at public transport nodes within public realm and urban spaces.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	+	++	D	P	Transport network, road network, road users, local population	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and higher utilisation of public spaces.	The policy has positive effects as there is reference to maximising opporutnities for active travel and connection to public transport in new developments, as well as reference to design guidance and quality measures.	None identified.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	+	+	I	P	Local population, local communities, air quality	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to improving connection to public transport and maximising opportuntiies for active travel, which can help to promote sustainable modes of transport and improve air quality.	None identified.

10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	+	+	I	P	Local population, local communities, air quality	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to improving connection to public transport and maximising opportunties for active travel within new development proposals, which can help to promote sustainable modes of transport and improve air quality.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	o	o	o	I	P	Local population, local communities, air quality	N/A	N/A	The policy has neutral effects as there is no reference to areas of poor air quality, however the policy is focused on enhancing the design of public real, and urban spaces through developments.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to retaining mature natural features of interest and enhancing biodiversity.	The policy could make more explicit reference to European, nationally and locally designated wildlife and geological sites in relation to retaining mature natural features of interest.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to retaining mature natural features of interest and enhancing biodiversity.	The policy could make more explicit reference to designated wildlife sites, habitats and species and protected and unique geological features in relation to retaining mature natural features of interest.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	+	+	++	D	P	Wildlife, landscapes and green and blue infrastructure	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to enhancing and connecting green routes, as well as a commitment to planting street trees and supporting other green infrastructure.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to enhancing and connecting green routes, as well as a commitment to planting street trees and supporting other green infrastructure.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+	+	+	D	P	Wildlife, landscapes and green and blue infrastructure	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to retaining mature natural features of interest and enhancing biodiversity.	The policy could make more explicit reference to local wider ecological networks including local wildlife-rich habitats in relation to retaining mature natural features of interest.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	+	+	+	D	P	Built environment, natural environment	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to aligning with PfE policies relating to Green Infrastructure and Sustainability, such as through SuDs, which can augment resilience to climate change.	The policy could be enhanced by referencing how the GI and sustainability aspect of the policy is important for climate resilience.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	o	o	o	I	P	Built environment, natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peatlands, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	+	+	++	I	P	Built environment, natural environment	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles and street tree planting, which represent nature-based solutions.	The policy could be enhanced by referencing how nature-based solutions are important for climate resilience.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	o	o	o	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	N/A	N/A	The policy has neutral effects as there is no reference to areas of high flood risk, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	+	+	++	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to managing surface water and aligning with PfE Policy JP-S4 Flodd Risk and the Water Environment.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	+	+	++	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to managing surface water and aligning with PfE Policy JP-S4 Flodd Risk and the Water Environment.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	+	+	++	D	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to managing surface water and aligning with PfE Policy JP-S4 Flodd Risk and the Water Environment.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	+	++	++	D	T	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to managing surface water and aligning with PfE Policy JP-S4 Flodd Risk and the Water Environment.	None identified.

13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	+	+	++	I	P	Flood risk areas, local population, local communities, built envirnment, flood defences	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles and street tree planting, which represent nature-based solutions.	The policy could be enhanced by referencing how nature-based solutions are important for climate resilience.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	o	o	o	I	P	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to Water Framework Directive, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	+	+	+	D	P	Water courses, ground water, water supplies, local population	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles, which can help protect water features from pollution.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	o	o	o	I	T	Water courses, ground water, water supplies, local population	N/A	N/A	The policy has neutral effects as there is no reference to water resources, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	+	+	+	I	P	Water courses, ground water, water supplies, local population	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles being considered in development proposals.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	+	+	+	I	P	Water courses, ground water, water supplies, local population	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles, which can help protect water features from pollution.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	+	+	+	I	P	Water courses, ground water, water supplies, local population	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles, which can help enhance water recycling.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	+	+	+	I	P	Energy infrastructure	Maximising opportunities for active travel can reduce emissions and improve air quality to minimise impacts of transport on the environment and local health	integrating active travel links with the wider transport network can promote transition to sustainable modes of transport and better air quality	The policy has positive effects as there is reference to maximising opportuntiies for active travel and connection to public transport, which help to reduce greenhouse gas emissions.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	o	o	o	I	P	Energy infrastructure	N/A	N/A	The policy has neutral effects as there is no reference to energy, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	++	++	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as it is focused on the design of public realm and contains measures to enhance its character, such as reference to using soft and hard landscaping.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to retainaing historic built features of interest.	The policy could be enhanced by strengthing wording around how development relates to its surrounding environment, and referencing heritage assets.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to retainaing historic built features of interest and enhancing local character and sense of place.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	+	+	++	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to promoting good design of public realms and urban spaces to form an integral part of new development, including enhancing local character.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+	+	+	D	P	Protected landscapes and/or built heritage assets. Protected or locally significant views	Integrating public realms with local developments can promote physical activity and lead to improved public health.	integrating active travel links with the wider transport network can promote higher utilisation of public spaces and encourage social gathering.	The policy has positive effects as there is reference to retainaing historic built features of interest.	The policy could be enhanced by referencing heritage assets.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to soils, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	o	o	o	I	P	Brownfield land, local population	N/A	N/A	The policy has neutral effects as there is no reference to land use, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	o	o	o	I	P	Natural environment	N/A	N/A	The policy has neutral effects as there is no reference to peat, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	+	+	+	I	P	Utility network	Increased hard surfacing in public realms may lead to incresed risk of flooding from surface water run-off.	Integrating with sustainable drainage and water management plans can reduce risk of flooding for the wider region.	The policy has positive effects as there is reference to sustainable water management principles, which can help enhance water recycling.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to natural resources, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	o	o	o	I	P	Utility network	N/A	N/A	The policy has neutral effects as there is no reference to waste and recycling, however the policy is focused on enhancing the design of public realm and urban spaces through developments.	None identified.

A.2.2 Allocations Assessment

			HSP S2D Allocation 1: Clarence Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents a key employment site.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects as 0% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 820m from a GP and 730m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 12% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 225m from a bus stop, 206m from the Beeway Network, and 18m from the Busy	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as the site is in close proximity to a TPO group.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as the site is in close proximity to a TPO group.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there is a listed building within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there is a listed building within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is a cleared employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is a cleared employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is a cleared employment site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2D Allocation 2: Berkeley Business Park		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity to develop new employment units.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	++	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	++	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has negative effects as the site is located 660m from a GP and 318m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 65m from a bus stop, 61m from the Beeway Network, and 282m from the Busy	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as the site is located on open grassland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as the site is located on open grassland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as the site is located on open grassland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2D Allocation 3: Conduit Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity to deliver a range of medium to small sizes unts.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 430m from a GP and from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 76m from a bus stop, 30m from the Beeway Network, and 52m from the Busy	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	--	The allocation has negative effects as 2% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 2% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSSI and 1% of the site is located within an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSI and 1% of the site is located within an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	--	The allocation has negative effects as 16% of the site is within Flood Zone 3 and 34% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	--	The allocation has ngeative effects as there are 5 listed buildings and Ashton Town Centre Conseration Area within 200m of the site.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	--	The allocation has ngeative effects as there are 5 listed buildings and Ashton Town Centre Conseration Area within 200m of the site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is a cleared employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is a cleared employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is a cleared employment site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2D Allocation 4: Ashton Moss East		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity to deliver a range of medium to small sizes unts.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	+	The allocation has positive effects as 10% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above and 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above and 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 930m from a GP and857m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 21% of the site is covered by GMLA index score of 5 and above, and 70% is within a 400m buffer of a Metrolink stop. Whilst 0% of the site is within an 800m buffer of a railway station, it is 66m from a bus stop, 131m from the Beeway Network, and 807m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	--	The allocation has negative effects as 8% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 8% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 100% of the site is in an area defined as peaty soil by Natural England.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as 99% of the site is located in a mineral safeguarding area for Brick Clay.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 100% of the site is in an area defined as peaty soil by Natural England.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	--	The allocation has negative effects as the site on open grassland in an area classified as deep peaty soil.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or high value land.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	--	The allocation has negative effects as 100% of the site is in an area classified as deep peaty soil and 76% of the site is covered by Agricultural Land Value Grade 1, 2 or 3.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or high value land.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	--	The allocation has negative effects as 100% of the site is in an area classified as deep peaty soil and 76% of the site is covered by Agricultural Land Value Grade 1, 2 or 3.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or high value land.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	--	The allocation has negative effects as the site on open grassland in an area classified as deep peaty soil.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or high value land.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	--	The allocation has negative effects as the site on open grassland in an area classified as deep peaty soil.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or high value land.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	--	The allocation has negative effects as 100% of the site is in an area defined as peaty soil by Natural England.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or high value land.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	--	The allocation has negative effects as 99% of the site is located in a mineral safeguarding area for Brick Clay.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2D Allocation 5: Palace Road		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 20 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 0% of the site is within 800m of each centre but the nearest primary school is 298m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 144m from a bus stop, and 242m from the Beeway Network and Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 144m from a bus stop, and 242m from the Beeway Network and Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 144m from a bus stop, and 242m from the Beeway Network and Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to education and training for local people as well as

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 144m from a bus stop, and 242m from the Beeway Network and Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	--	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as 96% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive/negative effects as it is located 505m from a GP and 1257m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 298m of a primary school and 971m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 298m of a primary school and 971m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 144m from a bus stop, and 242m from the	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 144m from a bus stop, and 242m from the	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	--	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as 29% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2D Allocation 6: Oxford Street East		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity to deliver high quality canal side employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 95% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% of the site is located 2m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% of the site is located 2m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has negative effects as the site is located 170m from a GP and 746m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located with an 800m buffer of a railway station and a bus stop is 141m away, and the Beeway Network is 2m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	--	The allocation has negative effects as there is a listed building on the site.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	--	The allocation has negative effects as there is a listed building on the site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on vacant land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on vacant land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on vacant land.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2E Allocation 1: Ashton Canal		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 65 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing, despite the references to the site helping address local deprivation, as 100% of the site is within the IMD decile.	The allocation could be enhanced by explicity referencing that the mix of housing will help meet affordable needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	++	The allocation has positive effects as there is reference to housing mix in this location helping address local deprivation, as 100% of the site is within the IMD decile.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as the site is well-connected to transport links, employment land and a primary school and 0% is within an Open Space Assessment Area of Greater Need, however, it is not within 800m of a centre.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 62% of the site is within 400m of a Metrolink stop and is close to bus stops and the Busy Beeway Network which all represent more efficient modes of transport that can support and enable development, however, only 7% of the site is within 800m of a rail station with 2tph and the proximity to the motorway network could encourage car trips.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 62% of the site is within 400m of a Metrolink stop and is close to bus stops and the Busy Beeway Network which represent sustainable or active modes of transport, however, only 7% of the site is within 800m of a rail station with 2tph and the proximity to the motorway network could encourage car trips.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health - however, only 7% of the site is within 800m of a rail station with 2tph and the proximity to the motorway network could encourage car trips.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to improving active transport routes, however the site is near the Busy Beeway Network and the PRoW network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as there is reference to housing mix in this location helping address local deprivation, as 100% of the site is within the IMD decile.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as there is reference to housing mix in this location helping address local deprivation, as 100% of the site is within the IMD decile.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	+	The allocation has positive effects as there is reference to housing mix in this location helping address local deprivation, as 100% of the site is within the IMD decile, which can aid community cohesion and wellbeing.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can support improvements in determinants of health - however, only 7% of the site is within 800m of a rail station with 2tph and the proximity to the motorway network could encourage car trips.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland which can function as green infrastructure, although the site itself would still be near to other green and blue infrastructure, public open space and leisure and recreational facilities.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as it is located over 900m from a GP and over 1.2km from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 400m of a primary school but over 1.1km from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education levels and accessibility to educational facilities is mixed.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as the site is accessible for public transport - the increased uptake of which can minimise the impact on the local environment and public health - however, only 7% of the site is within 800m of a rail station with 2tph and the proximity to the motorway network could encourage car trips.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 62% of the site is within 400m of a Metrolink stop, within is close to bus stops and the Busy Beeway Network which represent sustainable or active modes of transport, however, only 7% of the site is within 800m of a rail station with 2tph and the proximity to the motorway network	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	-	The site is close to the J24 of the M60, which could have negative impacts on air quality by encouraging vehicle trips.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	The site is close to the J24 of the M60, which could have negative impacts on air quality by encouraging vehicle trips.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 38% of the site is located within an existing AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 1% of the site contains a woodland / group TPO, it is near an area of particular importance or that could become of particular importance for biodiversity, and it is near Ashton Canal SBI.	Ensure that the new development maximises the ability to mitigate for the loss of the TPO.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	-	The allocation has negative effects as it is near an area of particular importance or that could become of particular importance for biodiversity.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as its development would mean loss of its existing multifunctional use as greenspace and woodland.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland, although the site itself is near to other green and blue infrastructure, public open space and leisure and recreational facilities.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland, which possibly supports wildlife-rich habitats, and it is near an area of particular importance or that could become of particular importance for biodiversity.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	?	The allocation has uncertain effects as the site does not have any landscape designations, although the loss of its existing green space and woodland use might affect landscape quality.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2E Allocation 2: Audenshaw Tram Stop		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 36 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	+	The allocation has positive effects as it references delivering a mix of housing.	The allocation could be enhanced by referencing the housing mix will be in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as the site is well-connected to transport links, employment land and a primary school whilst 0% is within an Open Space Assessment Area of Greater Need, however, only 5% of the site is within 800m of a centre.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	++	The allocation has positive effects as all of the site is immediately adjacent to a Metrolink stop, bus stops and the Busy Beeway Network which all represent more efficient modes of transport that can support and enable development.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as it is within a gas pipeline MAH consultation area, which could restrict development.	Ensure sufficient mitigation is developed to prevent the presence of the consultation area restricting development.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	++	The allocation has positive effects as all of the site is immediately adjacent to a Metrolink stop, bus stops and the Busy Beeway Network which all represent more efficient modes of transport that can support and enable development.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as its development would mean loss of its existing use as (informal) greenspace.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-/+	The allocation has negative/positive effects as its development would mean loss of its existing use as (informal) greenspace, although the site itself would be near to green and blue infrastructure, public open space and recreational facilities.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport safety issues.	Ensure that the new development recognises any additional needs for safety considerations.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as it is located over 700m from a GP and over 950m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 250m of a primary school but over 1.3km from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 400m of a primary school but over 1.1km from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, although only 5% of the site is within 800m of a town centre.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 88% of the site is located within an existing AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as whilst the site is currently (informal) greenspace, its' existing multifunctional aspect is likely limited.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?/+	The allocation has uncertain / postiive effects as whilst the site is currently (informal) greenspace, its' existing multifunctional aspect is likely limited and the site is near to other green and blue infrastructure, public open space and leisure and recreational facilities.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as its development would mean loss of its existing (limited and informal) greenspace function, which may cause harm to local wildlife-rich habitats.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	?	The allocation has uncertain effects as the site does not have any landscape designations, although the loss of its existing green space and woodland use might affect landscape quality.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space and woodland.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2F Allocation 1: Holland Street West		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	-	Whilst the site is close to the J24 of the M60, it has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site presents a highly attractive location for occupiers.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is located with 800m of each centre.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	Whilst the site is close to the J24 of the M60, it has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	Whilst the site is close to the J24 of the M60, it has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	--	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. The site is close to the J24 of the M60, which could have negative impact on road traffic accidents and air quality.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. However, 100% of the site is covered by by the GMAL index score of 5 and above.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a highly attractive location for occupiers, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% of the site is covered by by the GMAL index score of 5 and above.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located within 600m of a GP and 700m of a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. However, 100% of the site is covered by by the GMAL index score of 5 and above.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. The site is close to the J24 of the M60 which will encoruage private motor vehicle use.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. The site is close to the J24 of the M60 which will encoruage private motor vehicle use.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	-	The site is close to the J24 of the M60, which could have negative impacts on air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	The site is close to the J24 of the M60, which could have negative impacts on air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area that has seen recent development activity, however, the close proximity to J24 of the M60 and the clustering with new development suggests that this will be a highly attractive location for occupiers.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area that has seen recent development activity, however, the close proximity to J24 of the M60 and the clustering with new development suggests that this will be a highly attractive location for occupiers.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area that has seen recent development activity, however, the close proximity to J24 of the M60 and the clustering with new development suggests that this will be a highly attractive location for occupiers.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2F Allocation 2: Windmill Lane East		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	-	Whilst the site is close to the J24 of the M60, it has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site presents a highly attractive location for occupiers.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 66% of the site is located with 800m of each centre.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	Whilst the site is close to the J24 of the M60, it has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	Whilst the site is close to the J24 of the M60, it has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	--	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. The site is close to the J24 of the M60, which could have negative impact on road traffic accidents and air quality.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	--	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop, and covered by the GMAL index score of 5 and above.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a highly attractive location for occupiers, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	--	The allocation has negative effects as 0% of the site is covered by the GMAL index score of 5 and above.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	--	The allocation has negative effects as the site is within a COMAH zone.	Ensure that the new development considers the health and safety of employees and local residents.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located within 750m of a GP and 1050m of a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	--	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop, and covered by the GMAL index score of 5 and above.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	--	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop, and covered by the GMAL index score of 5 and above.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	--	The allocation has negative effects as 0% of the site is within an 800m buffer of a railway station with at least two trains per hour or a 400m buffer of a Metrolink stop. The site is close to the J24 of the M60 which will encoruage private motor vehicle use.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	-	The site is close to the J24 of the M60, which could have negative impacts on air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	The site is close to the J24 of the M60, which could have negative impacts on air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, the close proximity to J24 of the M60 and the clustering with existing development suggests that this will be a highly attractive location for occupiers.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, the close proximity to J24 of the M60 and the clustering with existing development suggests that this will be a highly attractive location for occupiers.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, the close proximity to J24 of the M60 and the clustering with existing development suggests that this will be a highly attractive location for occupiers.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2F Allocation 4: Two Trees Lane		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 318 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 0% is within 800m of each centre and is 873m from a secondary school, however there is a primary school within 358m.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as whist 0% of the site is within an 800m buffer of a railway and 400m buffer of the Metrolink, 55% is covered by the GMAL index score of 5 and above, as well as being within 3m of a bus stop, 6m of the Beeway Network, and 375m of the Busy Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as whist 0% of the site is within an 800m buffer of a railway and 400m buffer of the Metrolink, 55% is covered by the GMAL index score of 5 and above, as well as being within 3m of a bus stop, 6m of the Beeway Network, and 375m of the Busy Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has negative effects as 71% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has negative effects as 71% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport safety issues.	Ensure that the new development recognises any additional needs for safety considerations.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as the site is 212m from a GP and 444m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 358m of a primary school but over 800m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 358m of a primary school but over 800m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as whilst 0% of the site is within an 800m buffer of a railway and 400m buffer of the Metrolink, 55% is covered by the GMAL index score of 5 and above, as well as being within 3m of a bus stop, 6m of the Beeway Network, and 375m of the Busy Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as whilst 0% of the site is within an 800m buffer of a railway and 400m buffer of the Metrolink, 55% is covered by the GMAL index score of 5 and above, as well as being within 3m of a bus stop, 6m of the Beeway Network, and 375m of the Busy Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 71% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as 71% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has negative effects as 71% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	The allocation has neutral effects as the site is not located within a wildlife rich habitat.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as 71% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not contain any heritage designations.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not contain any heritage designations.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	?	The allocation has uncertain effects as the site is located at a cleared former school site, however, 71% of the site is open space with informal green space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	?	The allocation has uncertain effects as the site is located at a cleared former school site, however, 71% of the site is open space with informal green space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	?	The allocation has uncertain effects as the site is located at a cleared former school site, however, 71% of the site is open space with informal green space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2F Allocation 5: Exeter Avenue		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 29 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	-	The allocation has negative effects as despite proximity to the bus network and other green space, none of the site is within 400m of the Metrolink and/or 800m of a 2tph rail station, and is not within 800m of a centre	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as despite proximity to the bus network, none of the site is within 400m of the Metrolink and/or 800m of a 2tph rail station, which could increase car dependency and limit the ability of the transport network to support development.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as despite proximity to the bus network, Beeway network and existing PRoW, none of the site is within 400m of the Metrolink and/or 800m of a 2tph rail station, which could increase car dependency and restrict the transition to active and sustainable modes.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the delivery of a safe transport network that minimises impact on environment and health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as despite proximity to the bus network, Beeway network and existing PRoW, none of the site is within 400m of the Metrolink and/or 800m of a 2tph rail station, which could increase car dependency and restrict the transition to active and cleaner modes.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as its development would mean loss of its existing use as (informal) greenspace.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space / open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative/positive effects as its development would mean loss of its existing use as (informal) greenspace, although the site itself would be near to green and blue infrastructure, public open space and recreational facilities.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space / open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located within 650m from a GP and within 750m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located approximately 100m from a primary school and within 600m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education levels, although accessibility to educational facilities is good which could help this indirectly.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to education and healthcare will promote active travel which is a more effiecient mode of transport, however, the distance to centres will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as despite proximity to the bus network, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the delivery of a safe transport network that minimises impact on environment and health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has uncertain effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the delivery of a safe transport network that minimises impact on environment and health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	?	The allocation has uncertain effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the transition to active and cleaner modes.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as its development would mean loss of its existing use as (informal) amenity greenspace and open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space / open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace and woodland, although the site itself is near to other green and blue infrastructure, public open space and leisure and recreational facilities.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space / open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as its development would mean loss of its existing use as greenspace, which possibly supports wildlife-rich habitats.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space / open space.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	?	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, so could have reduced resilience to climate change effects.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any risk from climate change effects.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	?	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, so could have a greater risk of flooding.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any flood risk.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	?	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, so could have a greater risk of flooding.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any flood risk.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, and the loss of the existing greenspace use could enhance run-off rates.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any flood risk.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	?	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, so could have a greater risk of flooding.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any flood risk.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	-	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, and the loss of the existing greenspace use could enhance run-off rates, increasing vulnerability to flooding.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any flood risk.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	?	The allocation has uncertain effects as although 100% of the site is within Flood Zone 1, 6% of the site is at medium-high surface water flood risk area, so could have a greater risk of flooding.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any flood risk.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	--	The allocation has negative effects as it is within a coal mining high risk area, the presence of which could create water pollution hazards for development.	Ensure a thorough CMRA is undertaken with all risks approriately mitigated.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	?	The allocation has uncertain effects as all development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses, however the site is located in close proximity to Ashton Canal watercourse.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as its development would mean loss of its existing use as greenspace and openspace.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green space / open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not include any heritage assets.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	?	The allocation has uncertain effects as there is no reference to previosuly developed land.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	?	The allocation has uncertain effects as although the site is within a Coal Mining High Risk Area, there is no reference to redevelopment of derelict land, properties, buildings and infrastructure.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	?/+	The allocation has uncertain / positive effects as there is no reference to previously developed land, however, it is possible the presence of the Coal Mining High Risk Area requires land redmediation.	Ensure a thorough CMRA is undertaken with all risks approriately mitigated.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2F Allocation 6: Meadow Lane		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 18 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	-	The allocation has negative effects as the site is not within 800m of a centre, and is over 500m from a primary school and 1.7km from a secondary school.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as despite proximity to the bus network, Beeway network and existing PRoW, none of the site is within 400m of the Metrolink and/or 800m of a 2tph rail station, which could increase car dependency and restrict the transition to active and cleaner modes.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site contains several TPOs which could be impacted by development.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site contains several TPOs which could be impacted by development.	Ensure that the new development maximises the ability to mitigate for the loss of the existing green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located within 655m from a GP and within 485m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	-	The allocation has negative effects as the site is located approximately 485m from a primary school and within 1732m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	-	The allocation has negative effects as the site is located approximately 485m from a primary school and within 1732m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as despite proximity to the bus network, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the delivery of a safe transport network that minimises impact on environment and health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	?	The allocation has uncertain effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the transition to active and cleaner modes.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The allocation has uncertain effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the transition to active and cleaner modes.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is in close proximity to an LNR and LNRS, as well as containing several TPOs (group and individual).	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as the site is in close proximity to an LNR and LNRS, as well as containing several TPOs (group and individual).	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as the site contains several TPOs (group and individual).	Ensure that the new development maximises the ability to mitigate for the loss of or impact to green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has negative effects as the site contains several TPOs (group and individual).	Ensure that the new development maximises the ability to mitigate for the loss of or impact to green infrastructure.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is in close proximity to an LNR and LNRS, as well as containing several TPOs (group and individual).	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as the site contains several TPOs (group and individual).	Ensure that the new development maximises the ability to mitigate for the loss of or impact to landscape value.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effectd as the site is within 200mof 3 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effectd as the site is within 200mof 3 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as it is located at a cleared vacant former rectory site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as it is located at a cleared vacant former rectory site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as it is located at a cleared vacant former rectory site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2F Allocation 7: Land South of Greswell		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 78 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as the site is close to a primary school, however, is not within 800m of a centre and its development would result in the loss of an existing green space and MUGA.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for

5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	-	The allocation has negative effects as development of the site would result in the loss of young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	-	The allocation has negative effects as development of the site would result in the loss of young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	-	The allocation has negative effects as development of the site would result in the loss of young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as development of the site would result in the loss of young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as development of the site would result in the loss of young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has negative effects as 100% of the site is open space (including green space and young persons sports provision)	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has negative effects as 100% of the site is open space (including green space and young persons sports provision)	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.

6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located within 655m from a GP and within 485m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	-	The allocation has negative effects as the site is located approximately 485m from a primary school and within 1732m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	--	The allocation has negative effects as 100% of the site is open space (including green space and young persons sports provision)	Ensure that the new development maximises the ability to mitigate for the loss of the existing sports provision.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located approximately 179m from a primary school and 462m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as despite proximity to the bus network, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the delivery of a safe transport network that minimises impact on environment and health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as despite proximity to the bus network and Beeway Network, the site is not within an 800m buffer of a railway, 400m of the Metrolink, and 0% is covered by the GMLA index score of 5 and above.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	?	The allocation has uncertain effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the transition to active and cleaner modes.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The allocation has uncertain effects as despite proximity to the bus network, Beeway network and existing PRoW, the site has limited accessibility to Metrolink and rail, which could increase car dependency and restrict the transition to active and cleaner modes.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.

13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	--	The allocation has negative effects as the site would result in the loss of open space, including green space and young persons sports provision.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	--	The allocation has negative effects as 98% of the site is in a mineral safeguarding area for brick clay.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2F Allocation 8: Capesthorne		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 67 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	++	The allocation has positive effects as the site is within 800m of a centre and less than 300m from a primary and secondary school.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as it is located within 800m from a GP and within 525m of a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located less than 300m from a primary school and secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located less than 300m from a primary school and secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects the site is not within an 800m buffer of a railway or 400m of the Metrolink, however 100% is covered by the GMLA index score of 5 and above, it is 23m from a bus stop and less than 250m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	O	The allocation has neutral effects as the site is not located within a local wildlife rich habitat.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as development of the site would result in the loss of open/green space, however, it is not an area of need.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2G Allocation 1: Droylsden Marina		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 174 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	++	The allocation has negative effects as 100% of the site is within 800m of a centre and it is less than 400m from a primary school and a secondary school.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located within 150m of a GP and dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has negative effects as the site is located within 375m of a primary and secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has negative effects as the site is located within 375m of a primary and secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 18m from a bus stop and 97m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 13% of the site is located within an existing AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as it is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	-	The allocation has negative effects as it is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as it is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of or impact to wildlife and designated sites.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 7% of the site has a high risk of surface water flooding and 11% has a medium risk.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of several listed buildings and the Fairfield Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of several listed buildings and the Fairfield Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is vacant brownfield land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is vacant brownfield land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is vacant brownfield land.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2G Allocation 2: Edge Lane		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 143 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	-	The allocation has negative effects as only 1% is within 800m of each centre, a primary school is 456m away and secondary school is 653m away.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as 7% of the site is open space so development may result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as 7% of the site is open space so development may result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation hasnegative effects as it is located within 1km of a GP and 456m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has negative effects as the site is located within 405m of a primary and 653m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has negative effects as the site is located within 405m of a primary and 653m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as despite 0% of the site being within an 800m buffer of a railway, 42% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 2m from a bus stop and 0m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as 7% of the site is open space so development may result in a loss. The site is also in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space and biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	-	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as 7% of the site is open space so development may result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as 7% of the site is open space so development may result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as 7% of the site is open space so development may result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+	The allocation has single positive effects as the site is brownfield land, however, 7% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+	The allocation has single positive effects as the site is brownfield land, however, 7% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+	The allocation has single positive effects as the site is brownfield land, however, 7% of the site is open space.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2G Allocation 3: Ashton Hill Lane		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 28 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	++	The allocation has positive effects as 100% is within 800m of each centre, a primary school is 175m away and secondary school is 464m away.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as the site is 44m from a GP and 156m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 175m of a primary and 464m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 175m of a primary and 464m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	++	The allocation has very positive effects as 86% of the site is within an 800m buffer of a railway, 100% of the site is within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 13m from a bus stop and 187m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 7% of the site is located within an existing AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	-	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as the site is in close proximity to an SBI and LNRS.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 6% of the site has a high risk of surface water flooding and 14% has a medium risk.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of several listed buildings and the Fairfield Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of several listed buildings and the Fairfield Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has single positive effects as the site is brownfield land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has single positive effects as the site is brownfield land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has single positive effects as the site is brownfield land.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2G Allocation 4: Victoria Mill		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 127 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as 100% of the site is within 800m of each centre and the nearest primary and secondary school is less than 400m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station, 100% is within a 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 0m from a bus stop, and 75m from the Beeway Network and 8m Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station, 100% is within a 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 0m from a bus stop, and 75m from the Beeway Network and 8m Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station, 100% is within a 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 0m from a bus stop, and 75m from the Beeway Network and 8m Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station, 100% is within a 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 0m from a bus stop, and 75m from the Beeway Network and 8m Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport safety issues.	Ensure that the new development recognises any additional needs for safety considerations.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located 337m from a GP and 295m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 182m of a primary school and 350m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 182m of a primary school and 350m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station, 100% is within a 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 0m from a bus stop, and 75m from the Beeway Network and 8m Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as whilst 0% of the site is within 800m buffer of a railway station, 100% is within a 400m buffer of a Metrolink, 100% of the site is covered by the MAL index score of 5 and above, it is 0m from a bus stop, and 75m from the Beeway Network and 8m Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as the site is in close proximinty to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	-	The allocation has negative effects as the site is in close proximinty to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is in close proximinty to several listed buildings and 200m from Fairfield Conservation Area.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is in close proximinty to several listed buildings and 200m from Fairfield Conservation Area.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on vacant land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on vacant land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on vacant land.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2H Allocation 1: Bow Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site is in a highly accessible existing employment area and presents opportunities for delivering a range of mid-sized units.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is located with 800m of each centre.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% of the site is covered by the GMAL index score of 5 and above and there is a PROW 120m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a highly accessible employment area, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% of the site is covered by the GMAL index score of 5 and above.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as the site is located within 500m of a GP and 500m of a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 62% of the site is within an 800m buffer of a railway station with at least two trains per hour and 100% of the site is covered by the GMAL index score of 5 and above. However, 0% of the site is within a 400m buffer of a Metrolink stop.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 2% of the site is covered by the Tameside Open Space Assessment, and it is also in close proximity to an LNRS, RIGS, SBI, and SSSI.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	+/-	The allocation has positive and negative effects as 2% of the site is covered by the Tameside Open Space Assessment so this could be impacted, however, access to open space could also be improved.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	+/-	The allocation has negative effects as 2% of the site is covered by the Tameside Open Space Assessment, and it is also in close proximity to an LNRS, RIGS, SBI, and SSSI.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%).	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%) and no mitigation is referened.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%) and no mitigation is referened.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%) and no mitigation is referened.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%) and no mitigation is referened.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%) and no mitigation is referened.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	-	The allocation has negative effects as the majority of the site is located within Flood Zone 2 (92%) and no mitigation is referened.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building and Ashton Town Centre Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building and Ashton Town Centre Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	+/-	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2H Allocation 2: Gate Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. However, it is only 3m from a bus stop, 189m from the Beeway Network and 2m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site is in a highly accessible existing employment area and presents opportunities for delivering a range of industrial units.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects as 0% of the site is located with 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. However, it is only 3m from a bus stop, 189m from the Beeway Network and 2m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. However, it is only 3m from a bus stop, 189m from the Beeway Network and 2m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. However, it is only 3m from a bus stop, 189m from the Beeway Network and 2m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	The allocation has negative effects as only 33% of the site is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a highly accessible employment area, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	--	The allocation has negative effects as only 33% of the site is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 700m from a GP and 1000m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. However, it is only 3m from a bus stop, 189m from the Beeway Network and 2m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and only 33% of the site is covered by the GMAL index score of 5 and above. However, it is only 3m from a bus stop, 189m from the Beeway Network and 2m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	--	The allocation has negative effects as 1% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 1% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	-	The allocation has negative effects as 41% of the site is located within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2H Allocation 3: Globe Lane		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site is in a highly accessible existing employment area and presents opportunities for delivering a range of industrial units.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects as 0% of the site is located with 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	--	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 900m from a GP and 800m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as the site is not located within an 800m buffer of a railway station, 400m buffer of a metrolink, and is not covered by the GMAL index score of 5 and above. However, it is only 40m from a bus stop, 106m from the Beeway Network and 4m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has neutral effects as the site is within 200m of a listed building.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has neutral effects as the site is within 200m of a listed building.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area, however, this will be a highly attractive location to the local market.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2I Allocation 1: Victoria Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents the opportunity to expand Newton Business Park with modern industrial premises.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects as 0% of the site is located with 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. This could encourage reliance on private vehicles, rather than sustainable, active modes.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located over 1500m from a GP and a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as only 39% the site is located within an 800m buffer of a railway station, 0% is located within 400m buffer of a metrolink, and 43% is covered by the GMAL index score of 5 and above. However, it is only 2m from a bus stop and 135m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and 18% of the site contains TPOs (group).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space and biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and 18% of the site contains TPOs (group).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space and biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and 18% of the site contains TPOs (group).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space and biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and 18% of the site contains TPOs (group).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space and biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and 18% of the site contains TPOs (group).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space and biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and 18% of the site contains TPOs (group).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	--	The allocation has negative effects as there is a listed building within the site and within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	--	The allocation has negative effects as there is a listed building within the site and within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment, as it is an area of grazing land and woodland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment, as it is an area of grazing land and woodland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	--	The allocation has ngeative effects as 100% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment, as it is an area of grazing land and woodland.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2I Allocation 2 : Canal Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity for an employment led regeneration scheme.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is located within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as 63% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as 63% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	The allocation has positive effects as 63% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities,
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located over 400m from a GP and 750m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy Beeway Network.	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 58m from a bus stop, 14m from the Beeway Network, and 43m from the Busy	A new employment facility could increase pressure on active travel facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	--	The allocation has negative effects as 5% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	--	The allocation has negative effects as 5% site is located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there are 4 listed buildings within 200m of the site.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there are 4 listed buildings within 200m of the site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on a cleared vacant employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on a cleared vacant employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on a cleared vacant employment site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2I Allocation 3: Leigh Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 39 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 100% is within 800m of each centre, a primary school is 126m away, but a secondary school is 1km away.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+/-	The allocation has positiv/negative effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health. However, the allocation is an area of green space/playing field. Development would result in the loss of access to this space for local residents.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has negative effects as the site is 570m from a GP and 375m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 126m of a primary, but 1km of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 126m of a primary, but 1km of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 46m from a bus stop and 83m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	Ensure that the new development considers the provision of green infrastructure.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as the site is an area of green space/playing field. Development would result in the loss of access to this space for local residents. However, it is not in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2I Allocation 4: Former Hyde Library		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 102 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 100% is within 800m of each centre, a primary school is 138m away, but a secondary school is 1.1km away.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has negative effects as the site is 176m from a GP and 43m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 138m of a primary, but 1.1km of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	+	The allocation has positive effects as it is adjacent to a playing field.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 138m of a primary, but 1.1km of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 61m from a bus stop and 154m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 20% of the site has a high risk of surface water flooding and 3% has a medium risk.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+/-	The allocation has positive/negative effects as the former Hyde Library is a non-designated heritage asset, however, the conversion into apartments will enable the redevelopment of a brownfield site whilst preserving its historical significance.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+/-	The allocation has positive/negative effects as the former Hyde Library is a non-designated heritage asset, however, the conversion into apartments will enable the redevelopment of a brownfield site whilst preserving its historical significance.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive/negative effects as the former Hyde Library is a non-designated heritage asset, however, the conversion into apartments will enable the redevelopment of a brownfield site whilst preserving its historical significance.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive/negative effects as the former Hyde Library is a non-designated heritage asset, however, the conversion into apartments will enable the redevelopment of a brownfield site whilst preserving its historical significance.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive/negative effects as the former Hyde Library is a non-designated heritage asset, however, the conversion into apartments will enable the redevelopment of a brownfield site whilst preserving its historical significance.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2I Allocation 5: Arnside Drive		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 68 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 100% is within 800m of each centre and schools are within 350m, however, the site is an area of green space and development would result in a loss. The green space, however, is informal and not designated open space.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+/-	The allocation has positiv/negative effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health. However, the allocation is an area of green space. Development would result in the loss of access to this space for local residents.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is 815m from a GP and 906m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive/negative effects as the site is located within 332m of a primary and 312m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive/negative effects as the site is located within 332m of a primary and 312m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 56m from a bus stop and 8m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of 2 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of 2 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as the site is an area of informal green space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2I Allocation 6: Flowery Field Station		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 98 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 0% is within 800m of each centre, but schools are within 200m. However, the site is an area of designated open space/green space (sports facility) and development would result in a loss.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	-	The allocation has negative effects as the site is an area of green space/sports facility. Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+/-	The allocation has positiv/negative effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health. However, the allocation is an area of green space/sports facility. Development would result in the loss of access to this space for local residents.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site is an area of green space/sports facility. Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site is an area of green space/sports facility. Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is 904m from a GP and 999m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive/negative effects as the site is located within 183m of a primary and 111m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	-	The allocation has negative effects as the site is an area of green space/sports facility. Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive/negative effects as the site is located within 183m of a primary and 111m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as the site is within an 800m buffer of a railway, 100% is covered by the GMLA index score of 5 and above, it is 24m from a bus stop and 26m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility). Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility). Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility). Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility). Development would result in the loss of access to this space for local residents.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as the site is an area of designated open space (green space/sports facility).	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of green space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2J Allocation 1: Kerry Way		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity for retail.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects 0% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. The site is located 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. The site is located 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located over 900m from a GP and from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway Network, and 341m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 650m from he motorway, 54m from a bus stop, 146m from the Beeway	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and is currently grazing land and an existing farm.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and is currently grazing land and an existing farm.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	--	The allocation has ngeative effects as 82% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and is currently grazing land and an existing farm.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2J Allocation 2: Stockport Road		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity for retail.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects 0% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. It is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	++	The allocation has positive effects as 66% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	++	The allocation has positive effects as 66% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	The allocation has positive effects as 66% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities,
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. It is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as the site is located 632m from a GP and 200m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the Busy Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop, 119m from the Beeway Network, and 580m from the	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated wildlife or geological site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area with a previous consent for employment development.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area with a previous consent for employment development.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in an existing employment area with a previous consent for employment development.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2J Allocation 3: Manley Grove		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 26 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as 100% of the site is within 800m of each centre and 326m from a primary school.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as the site is 66m from a bus stop, 32m from the Beeway Network and 36m from the Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as the site is 66m from a bus stop, 32m from the Beeway Network and 36m from the Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has ngeative effects as 6% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has ngeative effects as 6% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport safety issues.	Ensure that the new development recognises any additional needs for safety considerations.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive/negative effects as it is located 423m from a GP and 868m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 326m of a primary school but over 1.4km from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 326m of a primary school but over 1.4km from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as the site is 66m from a bus stop, 32m from the Beeway Network and 36m from the Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has ngeative effects as 6% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has ngeative effects as 6% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and therefore development would result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has ngeative effects as 6% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment and therefore development would result in a loss.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive/negative effects as the site is located on vacant brownfield land, however, it is in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive/negative effects as the site is located on vacant brownfield land, however, it is in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive/negative effects as the site is located on vacant brownfield land, however, it is in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 1: Egmont Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity for light industrial units.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. It is 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	++	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	++	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities,
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. It is 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as the site is located 159m from a GP and 419m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 49m from a bus stop and 13m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	--	The allocation has negative effects as 9% of the site is within Flood Zone 3 and 54% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there is a listed building with 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there is a listed building with 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive effects and negative effects as the site is located in a cleared vacant employment site, however, it has several constraints and recent residential application was refused.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive effects and negative effects as the site is located in a cleared vacant employment site, however, it has several constraints and recent residential application was refused.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive effects and negative effects as the site is located in a cleared vacant employment site, however, it has several constraints and recent residential application was refused.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2K Allocation 2: Audley Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity for employment development.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	++	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	++	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	+	The allocation has positive effects as 100% of the site is within the IMD decile based on LSOA and will provide employment opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities,
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above. It is 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as the site is located 300m from a GP and 400m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 36m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	--	The allocation has negative effects as 5% of the site is within Flood Zone 3 and 13% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there is a listed building with 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there is a listed building with 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on a cleared vacant employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on a cleared vacant employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on a cleared vacant employment site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2K Allocation 3: Waggon Road		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 23 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as 100% of the site is within 800m of each centre and 285m from a primary school.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 44m from a bus stop.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 44m from a bus stop.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and healthcare
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located 42m from a GP and 277m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 285m of a primary school but over 950m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 285m of a primary school but over 950m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 44m from a bus stop.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	-	The allocation has negative effects as 8% of the site is in Flood Zone 3 and 2% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on a vacant site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on a vacant site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on a vacant site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 4: Cheshire Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 187 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as 100% of the site is within 800m of each centre and 508m from a primary school.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and covered by the GMAL index score of 5 and above, 129m from a bus stop,and 0m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and covered by the GMAL index score of 5 and above, 129m from a bus stop,and 0m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to education and training for local people as well as
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on ‘protected characteristics’, as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive effects as it is located 385m from a GP and 622.76m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	-	The allocation has negative effects as the site is located within 508m of a primary school but over 974m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.

8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	-	The allocation has negative effects as the site is located within 508m of a primary school but over 974m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and covered by the GMAL index score of 5 and above, 129m from a bus stop,and 0m from the Beeway Network	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 21% of the site is within peaty soils, and the site is within close proximity to an SSSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	-	The allocation has negative effects as 14% of the site contains TPOs (groups)	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as 14% of the site contains TPOs (groups)	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as 14% of the site contains TPOs (groups)	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 21% of the site is within peaty soils, and the site is within close proximity to an SSSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	--	The allocation has negative effects as 21% of the site is within peaty soils.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.

13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as 14% of the site contains TPOs (groups)	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape quality.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of 2 listed buildings.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of 2 listed buildings.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on a vacant brownfield site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on a vacant brownfield site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on a vacant brownfield site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	--	The allocation has negative effects as 21% of the site is within peaty soils.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 5: Roaches		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 18 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	--	The allocation has negative effects as 0% of the site is within 800m of each centre and both primary and secondary schools are over 1.5km away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m of a Metrolink stop. However, 100% is covered by the GMAL index score of 5 and above, an its 151m from a bus stop.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m of a Metrolink stop. However, 100% is covered by the GMAL index score of 5 and above, an its 151m from a bus stop.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to education and training for local people as well as

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive effects as it is located 1.6km from a GP and from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	-	The allocation has negative effects as the site is located over 1km from a primary school and from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	-	The allocation has negative effects as the site is located over 1km from a primary school and from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and covered by the GMAL index score of 5 and above, 129m from a bus stop,and 0m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 1% of the site is in an SBI and an LNRS. It is also undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 1% of the site is in an SBI and an LNRS. It is also undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	-	The allocation has negative effects as 57% of the site is located in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape quality.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of 3 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of 3 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	?	The allocation has uncertain effects as the site is undeveloped green space, however, it is not identified in the Council's Open Space Assessment and is not identified as an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 6: Huddersfield Road		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 175 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/'-	The allocation has positive/negative effects as 0% of the site is within 800m of each centre, the nearest primary school is 500m away, and the nearest secondary school is 68m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m of a Metrolink stop. However, 100% is covered by the GMAL index score of 5 and above, an its 39m from a bus stop and 7m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m of a Metrolink stop. However, 100% is covered by the GMAL index score of 5 and above, an its 39m from a bus stop and 7m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to education and training for local people as well as

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive effects as it is located 935m from a GP and 848m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located 476m from a primary school and 68m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located 476m from a primary school and 68m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m of a Metrolink stop. However, 100% is covered by the GMAL index score of 5 and above, an its 39m from a bus stop and 7m from the	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 89% of the site is within peaty soils, 37% is located in an SBI and LNRS, and the site is within close proximity to an SSSI.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 89% of the site is within peaty soils, 37% is located in an SBI and LNRS, and the site is within close proximity to an SSSI.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	--	The allocation has negative effects as 89% of the site is within peaty soils.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape quality.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of 2 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of 2 listed buildings.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	--	The allocation has negative effects as 89% of the site is within peaty soils.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	--	The allocation has negative effects as 89% of the site is within peaty soils.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	?	The allocation has uncertain effects as it would result in the loss of sloping farmland and greenfield land, however, this is underutilised and has extant residential consent.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	--	The allocation has negative effects as 89% of the site is within peaty soils.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 7: Hollins Lane		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 26 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as 100% of the site is within 800m of each centre, the nearest primary school is 39m away, and the nearest secondary school is 476m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above, and its 110m from a bus stop and 180m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above, and its 110m from a bus stop and 180m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 12% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and healthcare

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 12% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive effects as it is located 541m from a GP and 612m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located 39m from a primary school and 476m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located 39m from a primary school and 476m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above, and its 110m from a bus stop and 180m from the Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape quality.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	?	The allocation has negative effects as the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 8: Brackenhurst		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 12 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 0% of the site is within 800m of each centre, but the nearest primary school is 259m away, and the nearest secondary school is 367m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	-	The allocation has negative effects as the Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to education and training for local people as well as

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as the site is not very accessible for public transport and active travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has positive effects as it is located 887m from a GP and 962m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located 259m from a primary school and 367m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located 259m from a primary school and 367m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of the Metrolink. The Beeway Network is also 426m away and the Busy Beeway Network is 3114m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within within a designated wildlife or geological site.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive and negative effects as the site is a mixed brownfield and greenfield site.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive and negative effects as the site is a mixed brownfield and greenfield site.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive and negative effects as the site is a mixed brownfield and greenfield site.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2K Allocation 9: Queen Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 136 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive/negative effects as 100% of the site is within 800m of each centre, but the nearest primary school is 238m away, and the nearest secondary school is 795m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and 100% of the site is covered by the GMAL index score of 5 and above. Bus stops are m away, and the Beeway Network is also 26m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and 100% of the site is covered by the GMAL index score of 5 and above. Bus stops are m away, and the Beeway Network is also 26m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and 100% of the site is covered by the GMAL index score of 5 and above. Bus stops are m away, and the Beeway Network is also 26m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to education and training for local people as well as

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the site also contains TPOs (groups)	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located 130m from a GP and 70m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located 238m from a primary school and 795m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located 238m from a primary school and 795m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+/-	The allocation has positive/negative effects as the proximity to public transport and active travel will promote efficient modes of transport, however, the lack of proximal facilities and services will not reduce the need to travel.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station and 100% of the site is covered by the GMAL index score of 5 and above. Bus stops are m away, and the Beeway Network is also 26m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the site also contains TPOs (groups). It is also in close	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the site also contains TPOs (groups). It is also in close proximity to an SSSI, SBI, and LNRS.	Ensure that the new development considers the provision of green infrastructure.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the site also contains TPOs (groups).	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the site also contains TPOs (groups).	Ensure that the new development considers the provision of green infrastructure.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the site also contains TPOs (groups). It is also in close proximity to an SSSI, SBI, and LNRS.	Ensure that the new development considers the provision of green infrastructure.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	--	The allocation has negative effects as 12% of the site is within Flood Zone 3 and 31% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as 1% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.However, it is not located in an area identified in the open space study as being in an area of need. 1% of the	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape quality.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there are several listed buildings within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there are several listed buildings within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as it is located on vacant and semi-derelict land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as it is located on vacant and semi-derelict land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as it is located on vacant and semi-derelict land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2L Allocation 1: Bayley Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents a key employment site and is noted as a local supply gap.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 100% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and it is 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	--	The allocation has negative effects as the site is within a COMAH zone.	Ensure that the new development considers the health and safety of employees and local residents.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 600m from a GP and 800m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is located within an 800m buffer of a railway station and 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 131m from a bus stop and 0m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	--	The allocation has negative effects as 1% of the site is within Flood Zone 3 and 76% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there are listed buildings within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there are listed buildings with 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site represents the largest brownfield employment site in the borough.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site represents the largest brownfield employment site in the borough.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site represents the largest brownfield employment site in the borough.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2L Allocation 2: Clarence Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents a key employment site.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	--	The allocation has negative effects as 0% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as 100% is covered by the GMAL index score of 5 and above and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is located 700m from a GP and 740m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 62% of the site is located within an 800m buffer of a railway station, 100% is covered by the GMAL index score of 5 and above. Whilst 0% of the site is located within a 400m buffer of a Metrolink stop, it is 70m from a bus stop and 6m from the Beeway Network.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as the site is in close proximity to a TPO group as well as 4 individual TPOs.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSI, SBI and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	-	The allocation has negative effects as 22% of the site is within Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as the site is in close proximity to a TPO group as well as 4 individual TPOs.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as there is a listed building within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as there is a listed building within 200m of the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is a cleared vacant employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is a cleared vacant employment site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is a cleared vacant employment site.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2L Allocation 3: Copley Mill		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	O	The allocation has neutral effects as the site is allocated for employment.	None required.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	O	The allocation has neutral effects as the site is allocated for employment.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	++	The allocation has positive effects as the site is allocated for employment.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	+	The allocation has positive effects as the site represents an opportunity to deliver a range of medium to small sizes unts.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	++	The allocation has positive effects as 98% of the site is within 800m of each centre.	The allocation could be enhanced by referencing supporting Tameside's town centres, if appropriate.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	+	The allocation has positive effects as the Beeway Network is 176m away and a PROW is 0m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for employment. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on employment.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as whilst it is considered a key employment site, there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	O	The allocation has neutral effects as it does not reference creating a sense of belonging, however, the allocation is focused on employment.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the Beeway Network is 176m away and a PROW is 0m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	O	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has ngeative effects as 52% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has ngeative effects as 52% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	O	The allocation has neutral effects as this is a strategic aim which is no likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has negative effects as the site is located 147m from a GP and 1038m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	O	The allocation has neutral effects as the site is allocated for employment.	None identified.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as it does not reference the provision of education and training on site.	The allocation could be enhanced by referencing the provision of on-site education and training.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is located with an 800m buffer of a railway station and a 400m buffer of a Metrolink stop. However, a bus stop is 2m away, and the Beeway Network is 176m away.	A new employment facility could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	?	The site has uncertain effects as it cannot be certain that the development will improve air quality.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS. 52% of the site is also open space and 7% of the site contains woodland/group TPO.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has ngeative effects as 52% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS. 52% of the site is also open space and 7% of the site contains woodland/group TPO.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for employment, but it can't be certain if this will involve low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has ngeative effects as 52% of the site is covered by typology in the 2025 Tameside Council Open Space Assessment.	Ensure that the new development maximises the ability to mitigate for the loss of the existing open space.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	--	The allocation has neutral effects as there are listed buildings within the site and within 200m of the site. 52% of the site is also within Copley Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	--	The allocation has neutral effects as there are listed buildings within the site and within 200m of the site. 52% of the site is also within Copley Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on vacant land and level open ground.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on vacant land and level open ground.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on vacant land and level open ground.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2L Allocation 4: Old Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 78 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+	The allocation has positive effects as 100% of the site is within 800m of each centre and 517m from a primary school and secondary school.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% of the site is covered by the MAL index score of 5 and above, 52m from a bus stop, 37m from the Beeway Network and 180m from the Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	?	The allocation has uncertain effects with regards to improving transport connectivity as there is reference to the site already being in a highly accessible location.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% of the site is covered by the MAL index score of 5 and above, 52m from a bus stop, 37m from the Beeway Network and 180m from the Busy Beeway Network.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and healthcare

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+	The allocation has positive effects as it is located 184m from a GP and 492m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	-	The allocation has negative effects as the site is located within 517m of a primary school and 735m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	-	The allocation has negative effects as the site is located within 517m of a primary school and 735m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% of the site is covered by the MAL index score of 5 and above, 52m from a bus stop, 37m from the Beeway Network and 180m from the Busy	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	++	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as 100% of the site is within 800m buffer of a railway station, 100% of the site is covered by the MAL index score of 5 and above, 52m from a bus stop, 37m from the Beeway Network and 180m from the Busy	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS. There are also individual TPOs within the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS. There are also individual TPOs within the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to an SSSI, SBI and LNRS. There are also individual TPOs within the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	--	The allocation has negative effects as 11% of the site is in Flood Zone 3 and 50% of the site is in Flood Zone 2.	Appropriate flood risk mitigation should be implemented (in line with best practice) for all developments that are within or near to areas of flood risk
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as the site contains several individual TPOs.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	--	The allocation has negative effects as the site is within 200m of several listed buildings. 100% of the site is also with Stalybridge Town Centre Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	--	The allocation has negative effects as the site is within 200m of several listed buildings. 100% of the site is also with Stalybridge Town Centre Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	++	The allocation has positive effects as the site is located on a vacant site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	++	The allocation has positive effects as the site is located on a vacant site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	++	The allocation has positive effects as the site is located on a vacant site.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2L Allocation 5: Huddersfield Road		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	?	The allocation has uncertain effects as the site is allocated for housing, with a total estimated capacity of 23 dwellings, however, 20% of the site is green belt.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	-	The allocation has negative effects as 0% of the site is within 800m of each centre and the nearest secondary school is 1071m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and healthcare

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 100% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+/-	The allocation has positive/negative effects as it is located 389m from a GP and 2397m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+/-	The allocation has positive/negative effects as the site is located within 36m of a primary school and 1071m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+/-	The allocation has positive/negative effects as the site is located within 36m of a primary school and 1071m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as the site is within close proximity to the South Pennine Moors SAC/SPA, 8% of the site is peaty soils, and there is also TPOs (groups) within the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as the site is within close proximity to the South Pennine Moors SAC/SPA, 8% of the site is peaty soils, and there is also TPOs (groups) within the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as the site is within close proximity to the South Pennine Moors SAC/SPA, 8% of the site is peaty soils, and there is also TPOs (groups) within the site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as the site contains several individual TPOs. 20% of the site is also Green Belt.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	--	The allocation has negative effects as the site is within 200m of several listed buildings. 99% of the site is also with Millbrook Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	--	The allocation has negative effects as the site is within 200m of several listed buildings. 99% of the site is also with Millbrook Conservation Area.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	--	The allcation as negative effects as 20% of the site is Green Belt.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	--	The allcation as negative effects as 20% of the site is Green Belt.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	--	The allcation as negative effects as 20% of the site is Green Belt.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	-	The allocation has negative effects as 23% of the site is located in a minerals safeguard area for being. sandstone	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2L Allocation 6: Cedar Avenue		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 35 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has negative effects as 0% of the site is within 800m of each centre but the nearest primary school is 551m and the nearest secondary school is 252m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 59% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and healthcare

4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 59% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as 100% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as 100% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.
7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+/-	The allocation has positive/negative effects as it is located 516m from a GP and 1493m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 551m of a primary school and 252m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages

7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 551m of a primary school and 252m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric vehicles.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or incentivising electric
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 1% of the site is located in an SBI and LNRS, and is in close proximity to an SSSI. 100% of the site is also open space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as 1% of the site is located in an SBI and LNRS, and is in close proximity to an SSSI. 100% of the site is also open space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 1% of the site is located in an SBI and LNRS, and is in close proximity to an SSSI. 100% of the site is also open space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	-	The allocation has negative effects as 100% of the site is open space, however, it is not an area of need.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as 100% of the site is open space, however, it is not an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as 100% of the site is open space, however, it is not an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as 100% of the site is open space, however, it is not an area of need.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.

18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	--	The allocation has negative effects as 100% of the site is located in a minerals safeguard area for being sand and gravel.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2L Allocation 7: Stalybridge Cricket Club		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 18 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 0% is within 800m of each centre, but a primary school is 213m away and secondary school is 389m away.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	?	The allocation has uncertain effects as the site presents opportunities for housing. However, 0% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is 622m from a GP and 897m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 213m of a primary and 389m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 213m of a primary and 389m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 28m from a bus stop and 30m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	O	The allocation has neutral effects as the site does not have any heritage designations.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as the site consists of green space/wooded areas.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as the site consists of green space/wooded areas.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as the site consists of green space/wooded areas.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

			HSP S2L Allocation 8: Millbrook		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 110 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is reference to housing mix but no reference to affordable housing.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has negative effects as 0% of the site is within 800m of each centre but the nearest primary school is 140m and the nearest secondary school is 797m away.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities connecting to centres could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no referencec to walking and cycling routes, although its proximity to the existing street network, including Busy Beeways, could support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 31% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of education, training, employment and healthcare
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as the site presents opportunities for housing and 31% of the site is located within the IMD decile based on LSOA.	Benefits such as creation of new affordable housing, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for deprived areas. Allocation should make reference to proximal and adequate provision of
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by encouraging equal opportunity.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	--	The allocation has negative effects as 96% of the site is open space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	--	The allocation has negative effects as 96% of the site is open space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of open space.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	-/?	The allocation has uncertain / negative effects as there is no reference to community safety and design, although its proximity to the transport network could create both social and transport	Ensure that the new development recognises any additional needs for safety considerations.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	+/-	The allocation has positive/negative effects as it is located 59m from a GP and 2157m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 140m of a primary school and 797m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 140m of a primary school and 797m from a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	-	The allocation has negative effects as 0% of the site is within 800m buffer of a railway station and 400m buffer of a Metrolink, 0% of the site is covered by the MAL index score of 5 and above.	A new housing development without sufficient connectivity to centres could increase car dependency and therefore the additional provision of transport facilities could be considered.
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located in an AQMA.	None identified.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	--	The allocation has negative effects as 53% of the sit is defined as peaty soil, 96% is open space, 21% contains TPOs groups, and it is in close proximity to an SSSI, SBI, LNR and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	--	The allocation has negative effects as 53% of the sit is defined as peaty soil, 96% is open space, 21% contains TPOs groups, and it is in close proximity to an SSSI, SBI, LNR and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	--	The allocation has negative effects as 96% is open space, and 21% contains TPOs groups.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	--	The allocation has negative effects as 96% is open space, and 21% contains TPOs groups.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	--	The allocation has negative effects as 53% of the site is defined as peaty soil, 96% is open space, 21% contains TPOs groups, and it is in close proximity to an SSSI, SBI, LNR and LNRS.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	-	The allocation has negative effects as 53% of the site is defined as peaty soil.	Any development needs to consider the potential presence of restorable peat on site and mitigate appropriately, for example, through drainage modifications, direct reinstatement, or restoration.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.

13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	--	The allocation has negative effects as 96% of the site is open space.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	+/-	The allocation has positive and negative effects as there is anlisted building (Oakwood Mill) within the site, as well as several listed buildings within 200m and 76% of the site is within Millbrook Conservation Area. However, the allocation	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	+/-	The allocation has positive and negative effects as there is anlisted building (Oakwood Mill) within the site, as well as several listed buildings within 200m and 76% of the site is within Millbrook Conservation Area. However, the allocation	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of heritage designations.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	+/-	The allocation has positive and negative effects as the site is mixed brownfield and greenfield.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	+/-	The allocation has positive and negative effects as the site is mixed brownfield and greenfield.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	+/-	The allocation has positive and negative effects as the site is mixed brownfield and greenfield.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	--	The allocation has negative effects as 53% of the sit is defined as peaty soil.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of peat.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	--	The allocation has negative effects as 72% of the site is located in a minerals safeguard area for being sandstone	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste facilities can be located to encourage recycling.

			HSP S2L Allocation 9: Buckley Street		
Ref	**Objective**	**Assessement Criteria**	**Score**	**Explanation from Proformas and Planning Assessment**	**Mitigation**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for market housing?	+	The allocation has positive effects as the site is allocated for housing, with a total estimated capacity of 46 dwellings.	None identified.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of housing land to meet Tameside's objectively assessed need for affordable housing?	?	The allocation has uncertain effects as there is no reference to housing mix or affordability.	Ensure the development provides sufficient affordable housing in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate mix of types, tenures and sizes of properties in relation to the respective levels of local demand?	?	The allocation has uncertain effects as there is no reference to housing mix or meeting local needs.	Ensure the development provides sufficient housing mix in line with local needs.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure housing land is well-connected with employment land, centres and green space or co-located where appropriate?	+/-	The allocation has positive/negative effects as 22% is within 800m of each centre, a primary school is 167m away and secondary school is 674m away.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Support improvements in the energy efficiency and resilience of the housing stock?	?	The allocation has uncertain effects as there is no reference to the energy efficiency or resilience of the development.	Ensure that the new development considers energy efficiency / resilience of housing stock.
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	Ensure an appropriate quantity of pitches/plots to meet Tameside's Gypsies, Travellers and Travelling Show People's assessed needs?	?	The allocation has uncertain effects as there is no reference to pitches/plots.	Ensure that the new development considers the affects on pitches/plots quantity.

2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Meet current and future demand for employment land for Tameside?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support education and training to provide a suitable labour force for future growth?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Provide sufficient employment land in locations that are well-connected and well-served by infrastructure?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the diversification of Tameside's local economy?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	Support the enhancement of the vitality and viability of Tameside's town centres?	O	The allocation has neutral effects as the site is allocated for residential use.	None required.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that the transport network can support and enable the anticipated scale and spatial distribution of development?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.

3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Improve transport connectivity?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Ensure that utilities / digital infrastructure can support and enable the anticipated scale and spatial distribution of development?	?	The allocation has uncertain effects as utilities are not referenced, and there are no overhead lines in the area, however, these would need to be enhanced to support the scale of development.	Consider feasibility study into requirements and ability of local network to support development
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the transition to active and sustainable modes of transport?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support the delivery of a safe transport network which minimises the impact on the local environment and public health?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	Support both the existing network and creation of new cycling and walking routes?	?	The allocation has uncertain effects as there is no reference to walking and cycling routes, although its proximity to the existing PRoW network and Busy Beeways could help support the existing network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
4	Reduce levels of deprivation and disparity	Reduce the proportion of people living in deprivation?	+	The allocation has positive effects as 61% of the site is within the IMD decile based on LSOA and will provide housing opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help bring about long term benefits for
4	Reduce levels of deprivation and disparity	Support reductions in poverty (including child and fuel poverty), deprivation and disparity across the domains of the Indices of Multiple Deprivation?	+	The allocation has positive effects as 61% of the site is within the IMD decile based on LSOA and will provide housing opportunities.	Benefits such as creation of construction and operational employment, or improved transport links or increases in the range of community facilities, should consider deprived areas. Where possible such benefits should be maximised to help
5	Promote equality of opportunity and the elimination of discrimination	Foster good relations between different people?	O	The allocation has neutral effects as it does not reference supporting relations between people, however, the allocation is focused on housing.	None identified.

5	Promote equality of opportunity and the elimination of discrimination	Ensure equality of opportunity and equal access to facilities/infrastructure for all?	?	The allocation has uncertain effects as there is no reference to equal opportunity.	The allocation could be enhanced by referencing that the mix of housing will help meet affordable needs.
5	Promote equality of opportunity and the elimination of discrimination	Ensure no discrimination based on 'protected characteristics', as defined in the Equality Act 2010?	O	The allocation has neutral effects as it assumed to be too high level to affect protected characteristics.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Ensure that the needs of different areas, (namely urban, suburban, urban fringe and rural) are equally addressed?	?	The allocation has uncertain effects as it cannot be certain that development will meet needs equally.	None identified.
5	Promote equality of opportunity and the elimination of discrimination	Create a sense of belonging, community cohesion and wellbeing for all members of the Tameside community?	?	The allocation has uncertain effects as it cannot be certain that development will support community cohesion or good relations.	None identified.
6	Support improved health and wellbeing of the population and reduce health inequalities	Support healthier, active lifestyles, proactive and preventative care and support improvements in determinants of health?	+	The allocation has positive effects as the site is accessible for public transport and active travel - the increased uptake of which can minimise the impact on the local environment and public health.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
6	Support improved health and wellbeing of the population and reduce health inequalities	Reduce health inequalities within Tameside and with the rest of England?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk, which could have an impact on health.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
6	Support improved health and wellbeing of the population and reduce health inequalities	Increase the quantity and quality of active environments, open spaces, green and blue infrastructure?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote access to green and blue infrastructure, public open space, leisure and recreational facilities?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	Ensure that the new development considers the provision of green infrastructure.
6	Support improved health and wellbeing of the population and reduce health inequalities	Promote community safety and design which discourages crime?	?	The allocation has neutral effects as this is a strategic aim which is not likely to be affected by the site's proposals.	None identified.

7	Ensure access to and provision of appropriate social infrastructure	Ensure people are adequately served by key healthcare facilities and community well-being assets, regardless of socio-economic status?	-	The allocation has negative effects as the site is 603m from a GP and 817m from a dentist.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Ensure sufficient access to educational facilities for all children and working age adults?	+	The allocation has positive effects as the site is located within 167m of a primary and 674m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning stages
7	Ensure access to and provision of appropriate social infrastructure	Promote access to and provision of appropriate community social infrastructure including playgrounds and sports facilities?	?	The allocation has uncertain effects as there is no reference to access to and provision of community social infrastructure.	Ensure any new development suitably considers the local capacity of and access to community social infrastructure.
8	Support improved educational attainment and skill levels for all	Improve education levels of children in the area, regardless of their background?	+	The allocation has positive effects as the site is located within 167m of a primary and 674m of a secondary school.	Ensure any new provision is accessible to all and that local capacity is considered throughout future masterplanning
8	Support improved educational attainment and skill levels for all	Improve education and skill levels of the population of working age the area, regardless of their background?	?	The allocation has uncertain effects as there is no reference to improving education and skill levels of the working age population.	None identified.
9	Promote sustainable modes of transport	Reduce the need to travel and promote efficient patterns of movement?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be
9	Promote sustainable modes of transport	Promote a safe and sustainable public transport network that reduces reliance on private motor vehicles?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be considered.
9	Promote sustainable modes of transport	Support the use of sustainable and active modes of transport?	+	The allocation has positive effects as despite not being within an 800m buffer of a railway or within a 400m buffer of a Metrolink, 100% is covered by the GMLA index score of 5 and above, it is 38m from a bus stop and 6m from the Beeway Network.	A new housing development could increase pressure on transport facilities and therefore the improvement or additional provision of these could be

10	Improve air quality	Improve air quality within Tameside, specifically within designated sites, Greater Manchester Combined Authority Air Quality Management Area, and other biodiversity assets?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation, suh as implementing green infrastructure and/or
10	Improve air quality	Minimise emissions and particulates from harmful pollutants when delivering new developments?	+	The allocation has positive effects as the site is highly accessible for public transport and active travel, and should be positioned to reduce reliance on private motor vehicles.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation,
10	Improve air quality	Locates development not within existing areas of poor air quality?	O	The allocation has neutral effects as the site is not located within an AQMA.	The allocation could be enhanced by seeking to minimise the number of trips made by private car to/from the site, and by considering the use of mitigation
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Protect, conserve and enhance new and existing European, nationally and locally designated wildlife and geological sites?	O	The allocation has neutral effects as the site is not located within a designated site.	Ensure that the new development maximises the ability to mitigate for the loss of the existing biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Encourage enhancement and restoration of designated wildlife sites, habitats and species and protected and unique geological features?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of enhancement or restoration.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and enhance existing multifunctional green and blue infrastructure and / or contribute towards the creation of new multifunctional green and blue infrastructure?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Ensure access to green and blue infrastructure providing opportunities for recreation, amenity and tranquillity?	-	The allocation has negative effects as the site consists of green space/wooded areas, however, they are not designated and there are no TPOs on site.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.

11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	Support and safeguard local wider ecological networks including local wildlife-rich habitats?	?	The allocation has uncertain effects as there is no loss of infrasutructure, however, there is no provision of new infrastructure.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of biodiversity.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Ensure that communities, existing and new developments and infrastructure systems within Tameside are resilient to the predicted effects of climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of renewable and low carbon energy technology?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate low carbon energy technology.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Encourage the restoration and enhancement of peatlands?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	Support the delivery of nature-based solutions to climate change?	O	The allocation has neutral effects as it does not propose nature-based solutions, however, these are likely to be covered by thematic policies.	None identified.
13	Reduce the risk of flooding to people and property	Restrict development in areas of high flood risk or a greater risk of flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.

13	Reduce the risk of flooding to people and property	Ensure adequate measures are in place to manage existing and residual flood risk from all sources?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Ensure that development does not increase flood risk due to increased run-off rates?	-	The allocation has negative effects as 5% of the site has a high risk of surface water flooding and 7% has a medium risk.	None identified.
13	Reduce the risk of flooding to people and property	Ensure development is appropriately future proof to accommodate future levels of flood risk including from climate change?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Deliver sustainable drainage systems and promote flood defences that reduces Tameside's vulnerability to flooding?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
13	Reduce the risk of flooding to people and property	Promote the use of nature-based solutions to manage flood risks?	O	The allocation has neutral effects as the majority of the site is located within Flood Zone 1 (100%) and is likely to have a low climate change vulnerability.	None identified.
14	Protect and improve the quality and availability of water resources	Encourage compliance with the Water Framework Directive?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Promote management practices that will protect water features from pollution?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Avoid consuming greater volumes of water resources than are available to maintain a healthy environment?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Ensure that new water/waste water management infrastructure is delivered to support new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
14	Protect and improve the quality and availability of water resources	Minimise the risk of pollution arising from new development?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.

14	Protect and improve the quality and availability of water resources	Encourage water efficiency and promote the use of water recycling systems?	O	All development is assumed to follow best pratice with regards to water management, flood risk and (potential) impacts on watercourses.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage energy demand reductions and energy efficiency in new development?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Encourage development that incorporates energy generation to achieve carbon emission reductions?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote a proactive reduction in direct and indirect greenhouse gas emissions emitted within Tameside?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	Promote the use of renewable and low carbon energy schemes?	?	The allocation has uncertain effects as the site is allocated for residential use, but it is unknown if this will integrate energy generation.	Encourage energy efficiency in new developments and ways that it can be increased, such as highlighting the benefits of sustainable modes of transport
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Improve landscape quality and the character of open spaces and the public realm?	O	The allocation has neutral effects as the site does not have any landscape designations.	None identified.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Conserve and enhance the historic environment, heritage assets and their setting?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Respect, maintain and strengthen local character and distinctiveness including the setting of the Peak District National Park?	?	The allocation has uncertain effects as there is no reference to the Peak District National Park.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of landscape designations.
16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Promote high quality design in context with its urban and rural landscape?	?	The allocation has uncertain effects as there is no reference to high quality design.	This is covered in the thematic policies.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	Protect or enhance the significance of designated and non-designated heritage assets?	-	The allocation has negative effects as the site is within 200m of a listed building.	The allocation could be enhanced by ensuring that the new development avoids these areas and/or maximises the ability to mitigate any impacts or loss of
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support the development of previously developed land and other sustainable locations?	-	The allocation has negative effects as the site consists of undeveloped land and green space/wooded areas.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect the best and most versatile agricultural land / soil resources from inappropriate development?	O	The allocation has neutral effects as it is not agricultural land.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Protect soils of high environmental value in both a general and local context?	O	The allocation has neutral effects as there is no reference to high value soils.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the redevelopment of derelict land, properties, buildings and infrastructure, returning them to appropriate uses?	-	The allocation has negative effects as the site consists of undeveloped land and green space/wooded areas.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Support reductions in land contamination through the remediation and reuse of previously developed land?	-	The allocation has negative effects as the site consists of undeveloped land and green space/wooded areas.	Consider how development of derelict land, properties, buildings and infrastructure could be encouraged as a result of greenfield development (e.g. by incentives or inclusion of adjacent PDL)

17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	Encourage the protection of peat?	O	The allocation has neutral effects as the site is not located with an area defined as peaty soil by Natural England.	None identified.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Support the sustainable use of physical resources?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Promote sustainable construction methods
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Safeguard existing supply of natural resources?	-	The allocation has negative effects as most of the site is identified as being located in an area of coal mining high risk.	Ensure to mitigate any negative impacts through a Coal Mining Risk Assessment.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote movement up the waste hierarchy?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Promote reduced waste generation rates?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	Encourage recycling and composting of waste and avoid landfill?	O	The allocation has neutral effects as it is not located within an allocation for waste management.	Consider waste and recycling facilities in design e.g. consider the location of waste/recycling facilities in design/layout of masterplans, and how waste

A.2.3 Reasonable Alternatives Assessment

Reasonable Alternative	Urban Max							
Ref	**Objective**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permanent**	**Explanation Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	+	+	+	D	P	The reasonable alternative has positive effects as it references maximising housing growth, however, there is a focus on apartment-led development to achieve this, rather than a mix of types and tenures.	The reasonable alternative could be enhanced by referencing the delivery of different types of residential development.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	+	+	+	D	P	The reasonable alternative has positive effects as it references using existing land supply for employment growth.	The reasonable alternative could be enhanced by referencing the delivery of employment across the borough, rather than focusing on the west.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	-	-	-	D	P	The reasonable alternative has negative effects as it references maximising growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of transport infrastructure to support housing and employment growth.
4	Reduce levels of deprivation and disparity	+	+	+	I	T	The reasonable alternative has positive effects as employment growth could support a reduction in deprivation.	The reasonable alternative could be enhanced by making more explicit reference to supporting growth in areas with high levels of deprivation.
5	Promote equality of opportunity and the elimination of discrimination	o	o	o	I	T	The reasonable alternative has neutral effects as there is no reference to equality of opportunitiy, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making more explicit reference to ensuring growth promotes equality of opportunity.
6	Support improved health and wellbeing of the population and reduce health inequalities	-	-	-	I	T	The reasonable alternative has negative effects as it references maximising growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of health and wellbeing facilities and active travel to support housing and employment growth.
7	Ensure access to and provision of appropriate social infrastructure	-	-	-	D	P	The reasonable alternative has negative effects as it references maximising growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of social infrastructure to support housing and employment growth.

8	Support improved educational attainment and skill levels for all	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to education and skills, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to the delivery of educational facilities to support housing and employment growth.
9	Promote sustainable modes of transport	-	-	-	D	P	The reasonable alternative has negative effects as it references maximising growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of transport infrastructure to support housing and employment growth.
10	Improve air quality	-	-	-	I	P	The reasonable alternative has negative effects as it references maximising housing growth. The development of new housing and supporting infrastructure will have a negative impact on the air quality in these areas over time.	The reasonable alternative could be enhanced by making explicit reference to mitigation and adaptation measures to ensure the resilience of new developments to air pollution.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to biodiversity, green and blue infrastructure and geodiversity assets, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to mitigation and adaptation measures to ensure the conservation and enhancement of biodiversity, green and blue infrastructure, and geodiversity assets.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	-	-	-	D	P	The reasonable alternative has negative effects as it references maximising growth through the development of housing and employment sites, but does not reference the resilience of these sites to the effects of expected climate change.	The reasonable alternative could be enhanced by making explicit reference to climate change mitigation and adaptation measures to ensure the resilience of the new developments.
13	Reduce the risk of flooding to people and property	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to flood risk, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to development locations and mitigation measures to reduce the risk of flooding to people and property.
14	Protect and improve the quality and availability of water resources	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to water resources, however, the alternative is focused on maximising housing and employment growth.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to energy, however, the alternative is focused on maximising housing and employment growth.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to landscape, townscape, and heritage, however, the alternative is focused on maximising housing and employment growth.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	+	+	+	D	P	The reasonable alternative has positive effects as it references making the best use of sites within the urban area, which could encourage efficient use of previously developed land for housing and employment needs.	The reasonable alternative could be enhanced by explicitly referencing the use of brownfield sites to achieve sustainable growth.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	-	-	-	D	P	The reasonable alternative has negative effects as it references maximising growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of waste infrastructure to support housing and employment growth.

Reasonable Alternative	Decentralisation/Suburbanisation							
Ref	**Objective**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permanent**	**Explanation Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	+	+	+	D	P	The reasonable alternative has positive effects as it references housing growth, however, this would be delivered at lower densities so additional land would need to be found. It also focuses growth in the suburbs which are typically less connected.	The reasonable alternative could be enhanced by referencing the delivery of transport infrastructure to support housing and employment and economic growth.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	?	?	?	D	P	The reasonable alternative has an uncertain effect as it references using existing land supply for employment growth, but aims to redistribute housing growth to the edges of the urban area to reflect trends in online retailing.	The reasonable alternative could be enhanced by referencing the delivery of transport infrastructure to improve connectivity to town and urban centres to foster employment and economic growth.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	-	-	-	D	P	The reasonable alternative has negative effects as it references suburban growth, but does not reference providing infrastructure to support it, particularly in the suburbs which are typically less connected.	The reasonable alternative could be enhanced by referencing the delivery of transport infrastructure to support housing and employment growth.
4	Reduce levels of deprivation and disparity	+	+	+	I	T	The reasonable alternative has positive effects as employment growth could support a reduction in deprivation.	The reasonable alternative could be enhanced by making more explicit reference to supporting growth in areas with high levels of deprivation.
5	Promote equality of opportunity and the elimination of discrimination	o	o	o	I	T	The reasonable alternative has neutral effects as there is no reference to equality of opportunitiy, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making more explicit reference to ensuring growth promotes equality of opportunity.
6	Support improved health and wellbeing of the population and reduce health inequalities	-	-	-	I	T	The reasonable alternative has negative effects as it references suburban growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of health and wellbeing facilities and active travel to support housing and employment growth.
7	Ensure access to and provision of appropriate social infrastructure	-	-	-	D	P	The reasonable alternative has negative effects as it references suburban growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of social infrastructure to support housing and employment growth.

8	Support improved educational attainment and skill levels for all	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to education and skills, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to the delivery of educational facilities to support housing and employment growth.
9	Promote sustainable modes of transport	-	-	-	D	P	The reasonable alternative has negative effects as it references suburban growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of transport infrastructure to support housing and employment growth.
10	Improve air quality	-	-	-	I	P	The reasonable alternative has negative effects as it references focusing housing growth on the suburbs of town centres and the edges of urban areas, which typically have better air quality. The development of new housing and supporting infrastructure will have an impact on the air quality in these areas over time.	The reasonable alternative could be enhanced by making explicit reference to mitigation and adaptation measures to ensure the resilience of new developments to air pollution.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to biodiversity, green and blue infrastructure and geodiversity assets, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to mitigation and adaptation measures to ensure the conservation and enhancement of biodiversity, green and blue infrastructure, and geodiversity assets.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	-	-	-	D	P	The reasonable alternative has negative effects as it references developing housing and employment sites, but does not reference the resilience of these sites to the effects of expected climate change.	The reasonable alternative could be enhanced by making explicit reference to climate change mitigation and adaptation measures to ensure the resilience of the new developments.
13	Reduce the risk of flooding to people and property	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to flood risk, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to development locations and mitigation measures to reduce the risk of flooding to people and property.
14	Protect and improve the quality and availability of water resources	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to water resources, however, the alternative is focused on maximising housing and employment growth.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to energy, however, the alternative is focused on maximising housing and employment growth.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to landscape, townscape, and heritage, however, the alternative is focused on maximising housing and employment growth.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	-	-	-	D	P	The reasonable alternative has negative effects as it references the development of housing and employment sites beyond the urban area as development would be delivered at lower densities.	The reasonable alternative could be enhanced by explicitly referencing the use of brownfield sites to achieve more sustainable growth.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	-	-	-	D	P	The reasonable alternative has negative effects as it references suburban growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of waste infrastructure to support housing and employment growth.

Reasonable Alternative	Neighbourhood Balance							
Ref	**Objective**	**ST (0-4 years)**	**MT (5-9 years)**	**LT (10+ years)**	**Direct or Indirect**	**Temporary or Permanent**	**Explanation Against Objective**	**Mitigation/Enhancement**
1	Provide a sustainable supply of housing land including for an appropriate mix of sizes, types, tenures in locations to meet housing need, and to support economic growth	+	++	++	D	P	The reasonable alternative has very positive effects as it references providing a balance of housing sizes and types, with good access to public transport.	None identified.
2	Provide a sustainable supply of employment land to ensure sustainable economic growth and job creation	+	++	++	D	P	The reasonable alternative has very positive effects as it references using both existing and additional employment land for growth, and sites which would have good access to public transport and the strategic highway network.	None identified.
3	Ensure that there is sufficient coverage and capacity of transport and utilities to support growth and development	+	+	++	D	P	The reasonable alternative has very positive effects as it references ensuring that both housing and employment sites have good access to public transport and the strategic highway network.	The reasonable alternative could be enhanced by making explicit reference to additional sustainable transport modes, such as active travel, as well as utilities infrastructure.
4	Reduce levels of deprivation and disparity	+	+	+	I	T	The reasonable alternative has positive effects as employment growth and access to public transport could support a reduction in deprivation.	The reasonable alternative could be enhanced by making more explicit reference to supporting growth in areas with high levels of deprivation.
5	Promote equality of opportunity and the elimination of discrimination	o	o	o	I	T	The reasonable alternative has neutral effects as there is no reference to equality of opportunitiy, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making more explicit reference to ensuring growth promotes equality of opportunity.
6	Support improved health and wellbeing of the population and reduce health inequalities	+	+	+	I	T	The reasonable alternative has positive effects as it references good access to public transport and a balanced distribution of housing delivery, which could support improved access to health services and facilities.	The reasonable alternative could be enhanced by making explicit reference to the delivery of health and wellbeing facilities and active travel to support housing and employment growth.
7	Ensure access to and provision of appropriate social infrastructure	+	+	+	D	P	The reasonable alternative has positive effects as it references good access to public transport and a balanced distribution of housing delivery, which could support improved access to social infrastructure.	The reasonable alternative could be enhanced by making explicit reference to the delivery of social infrastructure to support housing and employment growth.

8	Support improved educational attainment and skill levels for all	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to education and skills, however, it is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to the delivery of educational facilities to support housing and employment growth.
9	Promote sustainable modes of transport	+	+	+	D	P	The reasonable alternative has positive effects as it references good access to public transport.	The reasonable alternative could be enhanced by making explicit reference to active travel.
10	Improve air quality	+	+	+	I	P	The reasonable alternative has positive effects as it references good access to public transport, which supports a reduction in air pollution.	The reasonable alternative could be enhanced by making explicit reference to mitigation and adaptation measures to ensure the resilience of new developments to air pollution.
11	Conserve and enhance biodiversity, green and blue infrastructure and geodiversity assets	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to biodiversity, green and blue infrastructure and geodiversity assets, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to mitigation and adaptation measures to ensure the conservation and enhancement of biodiversity, green and blue infrastructure, and geodiversity assets.
12	Ensure communities, developments and infrastructure are resilient to the effects of expected climate change	-	-	-	D	P	The reasonable alternative has negative effects as it references developing housing and employment sites, but does not reference the resilience of these sites to the effects of expected climate change.	The reasonable alternative could be enhanced by making explicit reference to climate change mitigation and adaptation measures to ensure the resilience of the new developments.
13	Reduce the risk of flooding to people and property	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to flood risk, however, the alternative is focused on maximising housing and employment growth.	The reasonable alternative could be enhanced by making explicit reference to development locations and mitigation measures to reduce the risk of flooding to people and property.
14	Protect and improve the quality and availability of water resources	o	o	o	I	P	The reasonable alternative has neutral effects as there is no reference to water resources, however, the alternative is focused on maximising housing and employment growth.	None identified.
15	Increase energy efficiency, encourage low carbon energy generation (including heat) and reduce greenhouse gas emissions	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to energy, however, the alternative is focused on maximising housing and employment growth.	None identified.

16	Conserve and/or enhance landscape, townscape, heritage assets and their setting and the character of Tameside?	o	o	o	D	P	The reasonable alternative has neutral effects as there is no reference to landscape, townscape, and heritage, however, the alternative is focused on maximising housing and employment growth.	None identified.
17	Ensure that land resources are allocated and used in an efficient and sustainable manner to meet the housing and employment needs of GM, whilst reducing land contamination	+	+	+	D	P	The reasonable alternative has positive effects as it references making the best use of sites within the urban area, which could encourage efficient use of previously developed land for housing and employment needs.	The reasonable alternative could be enhanced by explicitly referencing the use of brownfield sites to achieve sustainable growth.
18	Promote sustainable consumption of resources and support the implementation of the waste hierarchy	-	-	-	D	P	The reasonable alternative has negative effects as it references housing and employment growth, but does not reference providing infrastructure to support it.	The reasonable alternative could be enhanced by referencing the delivery of waste infrastructure to support housing and employment growth.
